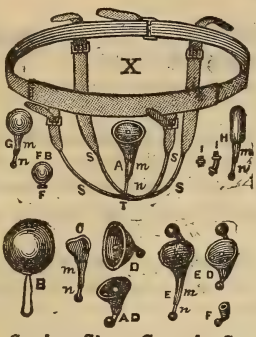
STAUFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. *1.*



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6.00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8 00; on XX, $10.00; on Y, $9.00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, $3 00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

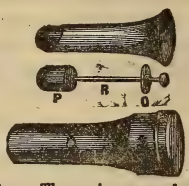
Self-Sustaining Globe B, or Cup D, $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

Abdominal Supporters. *2. 3.*

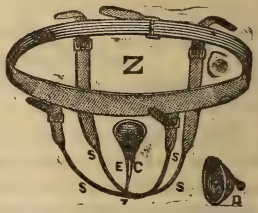
Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. *6.*



Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

SOLID STEM CUP SUPPORTER E. C. *5.*



Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

REFLECTOR, OR DENTISTS' LIGHT. *10.*

Price, $3.50.

Rectum Supporter and Ointment Holder. *4.*

$3.50.

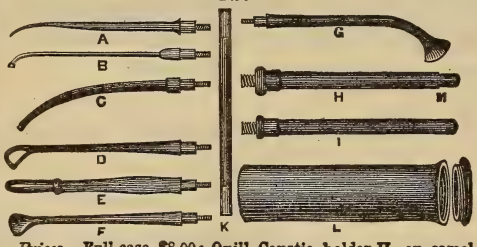
STEM LEVERS. *14.*

$4.50 on Z, $7.00 on X.

Permanent Stem I—The same in price as E C, Fig. 5, on all the belts.

Spring Stem J—The same as Spring Stem Cup A, Fig. 1, on either belt.

HARD RUBBER UTERINE EXAMINING CASE. *12.*



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Fenestrated Vaginal and Anal. *7.*

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Caustic Bottle and Case. *11.*

Price, $1.50.

Hymen—Pointed.

8.

Price, $1.50.

Vaginal and Vulva Dilator.

9.

Price, $1.50.

Price, $1.00. *15.*

13.

Price, $1.00.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS' Oval Shape. Complete Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

GRANULATED EFFERVESCENT SALTS

PREPARED BY

WILLIAM R. WARNER & Co.,

CHEMISTS,

PHILADELPHIA.

Granulated Effervescent

VICHY SALT.

(Grand Grille.)

A large teaspoonful dissolved in half a glass of water, forms a grateful and refreshing draught, identical with the natural water. Per dozen, $4.00

Granulated Effervescent

SELTZER SALT.

A tablespoonful to half a glass of water forms a grateful and refreshing saline draught, identical with the natural water. Per Dozen, $4.00

Granulated Effervescent

SEIDLITZ MIXTURE.

(Seidlitz Powder, U. S. P.)

An excellent aperient and refrigerant, very acceptable to the stomach. Per doz. $4.00

DOSE.—One tablespoonful in a glass of water.

Granulated Effervescent

NITRATE of POTASSIUM.

A dessert-spoonful in glass of water makes an excellent mixture and effervescing draught. The diaphoretic and refrigerant effects are readily produced. Per dozen, $4.00

Granulated Effervescent

CITRATE OF POTASSIUM.

A dessert-spoonful in glass of water makes an excellent neutral mixture and effervescing draught. The diaphoretic and refrigerant effects are readily produced. Per dozen, $5.00

Granulated Effervescent

Bi-Carbonate of Potassium.

A dessert-spoonful in glass of water makes an excellent neutral mixture and effervescing draught. The diaphoretic and refrigerant effects are readily produced. Per dozen, $4.00

Granulated Effervescent

Pepsin, Bismuth and Strychnia.

Each drachm or heaping teaspoonful contains the dose of Saccharated Pepsin, soluble Citrate of Bismuth, and the sixtieth grain of Citrate of Strychnia. Per dozen, $10.00

Granulated Effervescent

PEPSIN AND BISMUTH.

Each drachm or heaping teaspoonful concains the dose of Saccharated Pepsin and soluble Citrate of Bismuth. Per doz. $9.00

Granulated Effervescent

CITRATE OF MAGNESIA.

(Pleasant and Efficient.)

For a purgative effect, take two or more tablespoonfuls added to a small glass of water, and drink while effervescing. As a laxative, one or more tablespoonfuls taken in the same manner. One or two teaspoonfuls in sweetened water, produces a delightful, cooling drink in summer. Per dozen, $4.00

Granulated Effervescent

CITRATE LITHIA.

Each drachm or teaspoonful contains four grains of the chemically pure salt. Valuable in Rheumatic, Gouty and Analogous disorders. Per dozen, $10.00

Granulated Effervescent

KISSINGEN SALT.

A large teaspoonful dissolved in half a glass of water, forms an agreeable and refreshing draught identical with the natural water. Per dozen, $4.00

Granulated Effervescent

CRAB ORCHARD SALT.

Prepared from the exact analysis of the purified natural salt, obtained from the Crab Orchard Spring, Ky.

A tablespoonful in half a glass of water forms a grateful effervescing draught, producing the effect of the natural water. Per dozen, $4.00

Granulated Effervescent

OXALATE OF CERIUM.

Each drachm or large teaspoonful contains two grains of Oxalate of Cerium. Per dozen, $5.00

Granulated Effervescent

CITRATE CAFFEINE.

A dessert-spoonful containing one grain of Citrate of Caffeine should be given for sick headache, every hour or two before and during the paroxysms. Per dozen, $10.00

Physicians will please specify Warner & Co.—Equal to best English.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

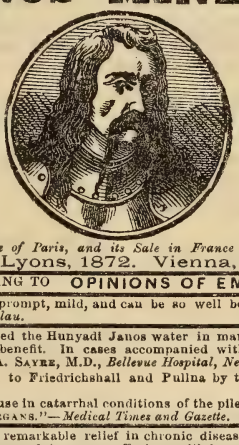
HUNYADI JANOS MINERAL WATER.

THE BEST AND CHEAPEST

NATURAL APERIENT.

THE BRITISH MEDICAL JOURNAL.

"HUNYADI JANOS.—The most agreeable, safest and most efficacious aperient water which has been brought under our notice."



LONDON MEDICAL RECORD.

"*Hunyadi Janos.*—The most pleasant and, owing to the smallness of its dose, the CHEAPEST of all the natural Aperient Waters."

THE LANCET.

"HUNYADI JANOS.—Baron Liebig affirms that its richness in aperient salts surpasses that of all other known waters."

From Prof. MACNAMARA, Prof. of Materia Medica, Royal College of Surgeons in Ireland.

"Far the most valuable and palatable of our Aperient Mineral Waters. I have been agreeably surprised with the result of a clinical investigation."

Specially approved by the Academy of Medicine of Paris, and its Sale in France authorized by decree of the French Government.

Medals awarded: Lyons, 1872. Vienna, 1873. Paris, 1878.

USES OF HUNYADI JANOS	ACCORDING TO OPINIONS OF EMINENT AUTHORITIES.
1. For habitual constipation.	"None so prompt, mild, and can be so well borne for a length of time."—Prof. SPIEGELBERG, *University of Breslau.*
2. By persons inclined to obesity, congestive and gouty disorders.	"I have used the Hunyadi Janos water in many cases of the rheumatic and gouty diathesis with very marked benefit. In cases accompanied with great obesity I prefer it to any other laxative."—Prof. LEWIS A. SAYRE, M.D., *Bellevue Hospital, New York.* "Preferred to Friedrichshall and Pullna by those who have tried them."—Prof. AITKEN, F.R.S., *Netley.* "Of great use in catarrhal conditions of the pile-ducts and bowels, and for CONGESTION of the LIVER and OTHER ORGANS."—*Medical Times and Gazette.*
3. In chronic affections of the organs of respiration and Circulation.	"Produces remarkable relief in chronic diseases symptomatic of affections of the abdominal and thoracic organs, and in serous effusions with impediment of respiration and circulation."—Prof. ALOIS MARTIN, *Royal Medical Councillor, University of Munich.*
4. Against hæmorrhoids, and portal and hepatic congestion.	"The most certain and the most comfortable in its action of all the aperient waters. The special indications for its use are, in costiveness (especially in that of pregnancy), in portal congestion with tendency to hæmorrhoids, and in sluggish action of the liver."—Inspector-General MACPHERSON, M.D., *Author of "Baths and Wells of Europe."*
5. During pregnancy; for nursery use; and in many female disorders.	"I prescribe none but this."—Baron v. SCANZONI, *Wurzburg.* "I prefer this to any and every other."—Dr. MARION SIMS, *New York, Honorary Fellow Obstetrical Society of London and Dublin.*
6. In bilious attacks and sick headaches.	"I have made use of the Hunyadi Janos mineral water ever since its introduction into this country, and with ever increasing satisfaction. It is highly beneficial to persons of sedentary habit, and in what are called bilious attacks."—Dr. SILVER, *Lecturer on Clinical Medicine, Charing-Cross Hospital.*
7. Against evil consequences of indiscretion in Diet.	"Has invariably good and prompt success: a most valuable item in the balneological treasury."—Prof. VIRCHOW, *Berlin.*

For ordinary aperient purposes a wineglassful of the Hunyadi Water may be taken at bed-time, or a wineglassful taken in the morning fasting. It is most efficacious when warmed to a temperature not below 60 deg., or when an equal quantity of hot water is added to it.

HUNYADI JANOS MINERAL WATER.

INDISPENSABLE TO THE TRAVELLING PUBLIC.

To secure the genuine Water, require bottles with a blue label bearing the name

The APOLLINARIS COMPANY, Limited, 19 Regent Sts. London, England.

Sole Agents for the United States, **FREDK. DE BARY & CO.**, 41 and 43 Warren St., New York.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.
PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,
The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer,	10 large Ivory Points, well charged on both sides	$1.50
	5 large Ivory Points, " " "	.80
	Large Ivory Points, less than 5, " " " each	.25
	1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants,	10 small Ivory Points	1.50
	1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

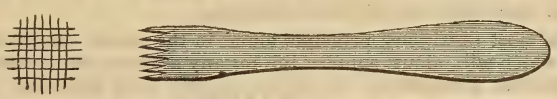
On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents;	per 1000 2.00
Large	per 100, 50 cents;	per 1000 4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.



SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

New Illustrated Catalogue of Surgical Instruments sent, post-paid, on request.

TO THE MEDICAL PROFESSION.

MALTINE.

(Extract of Malted Barley, Wheat & Oats.)

THIS PREPARATION

Contains from three to five times the Medicinal and Nutritive elements found in Extract of Malt.

MALTINE is a highly concentrated extract of malted *Barley, Wheat,* and *Oats,* containing, undiminished and unimpaired, all the medicinal and nutritious principles found in these cereals. By the most carefully conducted scientific process we are enabled to offer to the medical profession a perfect article, possessing from *three* to *five times* the therapeutic and nutritive merit of any foreign or domestic Extract of Malt.

In support of our claims we invite the attention of the profession to the following points, viz.:

FIRST.—In the manufacture of **MALTINE** the evaporation necessary to reduce it to its great density is conducted in vacuo, at a temperature ranging from 100° to 120° Fahr.; while most manufacturers of Extract of Malt resort to "open pan" or low pressure steam boiling, by neither of which processes can the extract be so produced as to preserve the Diastase, Phosphates, and Albuminoids, on which its remedial value so greatly depends, and the product is either of a dark color or of low specific gravity, possessing little virtue aside from the saccharine matter which it contains.*

SECOND.—*Carbon, Hydrogen, Nitrogen, Sulphur, Iron, Magnesium,* and *Potassium,* are essential elements in the food of man, and it is only in **MALTINE,** containing the combined properties of malted *Barley, Wheat,* and *Oats,* that all these principles can be found in the proper proportions; Extract of Malt made from *Barley alone* is wanting in some of the most important of these elements.

THIRD.—*Gluten* is the most nutritious principle found in the cereals, and is the only vegetable substance which will, alone, support life for any great length of time. It is composed of three distinct nitrogenous principles, together with fatty and inorganic matters, and is analogous to animal fibrin. **MALTINE** contains twenty times the quantity of *Gluten* found in any Extract of Malt.

FOURTH.—Liebig says, "Wheat and Oats stand first among our list of cereals in combining all the elements in proportions necessary to support animal life. They are especially rich in muscular and fat producing elements." The only reason we use Malted Barley, in the manufacture of **MALTINE,** is that it contains larger proportions of mineral matters (bone producers) and Diastase. It is deficient in all other essential elements.

We believe that any practitioner will readily recognize the superiority of MALTINE, and would request a trial and comparison of merits with any article offered for similar uses.

* As a sure test for Diastase, and the Albuminoids, a small quantity should be put in a test tube or small vial, largely diluted with water, and heated to the boiling point, when the Albumen, if present, will coagulate, and appear in little flocculent particles throughout the liquid. If the extract remains clear, it is proof that it has already been coagulated by excessive heat, and removed by filtration during the process of manufacturing. Any heat which will coagulate Albumen will inevitably destroy the digestive power of Diastase.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

The Nitrogenous constituents of *MALTINE* have a composition identical with that of the chief constituents of the Blood, and therefore contain nearly every element requisite for the reproduction of the human body.

MALTINE AND ITS COMPOUNDS

can undoubtedly be used with greater success than any other remedy now known, in cases of general and nervous Debility, Indigestion, imperfect Nutrition and deficient Lactation; Pulmonary affections, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes and difficult expectoration; Cholera Infantum and wasting diseases of children and adults; Convalescence from Fevers, and whenever it is necessary to increase the vital forces and build up the system.

WE MANUFACTURE THE FOLLOWING PREPARATIONS, THE FORMULÆ AND DOSES OF WHICH ARE GIVEN IN OUR DOSE BOOKS, AND ON THE LABEL ATTACHED TO EACH BOTTLE:

MALTINE WITH HOPS.

MALTINE, FERRATED:

This combination is specially indicated in Anæmia and Chlorosis, and in all cases of defective nutrition where Iron is deficient in the system.

MALTINE WITH PHOSPHATES IRON AND QUINIA:

A powerful general and nutritive tonic.

MALTINE WITH PHOSPHATES IRON, QUINIA AND STRYCHNIA:

A powerful nutritive, general and nervous tonic.

MALTINE WITH PEPSIN AND PANCREATINE:

One of the most effective combinations in Dyspepsia, Cholera Infantum, and all diseases resulting from imperfect nutrition. It contains three of the all-important digestive agents, Diastase being one of the constituents of the *MALTINE*. We believe there are few cases of Dyspepsia which will not readily yield to the medicinal properties of the above combination, while the system is invigorated by its nutritive qualities.

MALTINE WITH BEEF AND IRON:

One of the most valuable combinations in cases of General Debility, when there is deficient nutrition and a deficiency of Iron in the system.

MALTINE WITH ALTERATIVES:

In this preparation *MALTINE* is combined with the most valuable Alteratives known, such as Iodides, Bromides and Chlorides, and will fully meet the requirements of the practitioners in Syphilis, Scrofula, and all depraved conditions of the blood.

MALTINE WINE.

This preparation contains all the medicinal and nutritive constituents of *MALTINE*, less 60 per cent. of the transformed starch or glucose, which renders the preparation lighter and more acceptable to some stomachs, and is recommended only in such cases.

MALTINE WINE WITH PEPSIN AND PANCREATINE:

(Each fluid ounce of MALTINE WINE contains 15 grains pure PEPSIN and 15 grains pure PANCREATINE).

We can recommend this preparation to the Medical Profession as being the most important remedy ever brought to their notice in all cases of Dyspepsia and Imperfect Nutrition, when the system needs invigorating and replenishing. It will be found, we believe, a perfect remedy in Vomiting in Pregnancy, Cholera Infantum and wasting diseases of children, and in Constipation and Chronic Diarrhœa resulting from mal-nutrition. It will agree with the most irritable stomach.

MALTO-YERBINE.

(Each pint of the above preparation contains 13 ounces MALTINE, 2 ounces CARRAGEEN and 1 ounce YERBINE).

With the nutritive, emollient and demulcent properties of *MALTINE* and *CARRAGEEN*, and the expectorant qualities of *YERBINE* (active principle of Yerba Santa), we offer this preparation to the Profession with the fullest confidence that it is the most perfect remedy yet produced in Chronic Pulmonary Affections, Irritation of the Mucous Membrane, Difficult Expectoration, Bronchitis and ordinary Coughs and Colds.

The Dose of all Preparations of *MALTINE* and compounds is from a dessert to a tablespoonful.

We also manufacture a perfectly prepared EXTRACT OF MALT, from *Barley only.*

MALTINE preparations are sold at the same prices as EXTRACT OF MALT and its combinations, and are put up in half-pint, pint and five-pint amber bottles; each bottle inclosed in a folding paper box.

1167-1162-eow

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

TROMMER EXTRACT OF MALT CO.,

FREMONT, OHIO.

4111eow

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page 58 of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice :— **Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts**, and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 JACKSON STREET, CHICAGO, ILL.

Our valuable pamphlet "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

MIAMI MEDICAL COLLEGE OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

The Preliminary Term of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

The Regular Winter Session will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.

Professor of Anatomy.

HENRY GRADLE, M.D.,
Lecturer upon Physiology.

ROSWELL PARK, A.M., M.D.,
Demonstrator of Anatomy and Assistant to the Chair of Anatomy.

GRADED COURSE OF INSTRUCTION.

A graded system of medical instruction was adopted at the organization of this College, twenty years ago and for twelve years it was the only representative of a classified course in this country. The recommendation of this method of teaching by two Medical College Conventions, by the American Medical Association, and by various State Medical Societies; and its more recent adoption by a number of other colleges, including some of the most prominent ones in the land; and its very general approval by the profession at large, afford gratifying evidence that this new departure was a movement in the right direction.

REQUIREMENTS FOR ADMISSION.

All applicants for admission are required to present evidence of graduation in some literary college, or certificates of attendance upon some scientific school or academy. If the applicant have neither diploma nor certificate, he must sustain a satisfactory examination as to his literary qualifications.

ADVANCED STANDING.

Students who have read medicine for one full year may enter upon the *Middle Course*, by sustaining satisfactory examinations upon studies embraced in the Junior Course.

Students who have read medicine for two years, including attendance upon one full course of lectures in some recognized medical college, may enter the *Senior Course*, by sustaining examinations upon the subjects embraced in the Junior and Middle Courses.

THE COLLEGE TERM.

A Preliminary course of Didactic and Clinical instruction, introductory to the general course, commences September 16th and continues till the commencement of the regular Session.

THE REGULAR COURSE of lectures commences Tuesday, September 30th, and will continue until March 30th, at which time the usual Commencement exercises will be held.

THE PRACTITIONERS' COURSE,

Designed for practitioners, will commence March 31st, 1880, following the Commencement, and will continue till April 28th. This special course is arranged to meet a very general want, and will afford special advantages for a *rapid*, yet *thorough*, practical review of the most important subjects in medicine and surgery.

CLINICAL ADVANTAGES.

Mercy Hospital, with its very perfect appointments; the Dispensary and the College clinics, offer an abundance of clinical material in every department of Medical and Surgical teaching. Over fourteen thousand patients were treated here during the *last year*.

In the Hospital every Senior student serves as dresser for an allotted term in the surgical wards, and receives a certificate to that effect.

Every Senior student has personal charge of one or more cases of obstetrics, under the immediate supervision of the Professor of obstetrics.

In the Gynecological Department, where large numbers of females apply for local treatment, each Senior student is trained by the Professor in the minute details of examination and treatment of the medical and surgical diseases of women.

PHYSIOLOGICAL LABORATORY.

Aided by the generous contributions of its alumni, this College is developing a PHYSIOLOGICAL LABORATORY, which will be opened for instruction during the present year.

PRIZES

Will be given by the Dean, for the best Thesis; by the Professor of Anatomy, a First Prize to the best Anatomist—open to all classes; Second Prize to the best Anatomist in the Junior Class; the Senn Prize, for the best Anatomical Preparation; and the Earl Prize, for the best Essay on Diseases of Children.

FEES.

Lecture Fees for the College Year, $75.00. Practitioners' Course, $30.00. Graduation Fee, $30.00. Registration Fee, $5.00. Demonstrator's Ticket, $5.00. Laboratory Ticket, $5.00. Hospital Ticket, $6.00.

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The **Regular Session** opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The **Recitation Session** begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

BETHESDA WATER.

BELLEVUE, PA., May 21st, 1879.

W. B. HYATT, M.D.,

Marshallville, Wayne Co., Ohio.

DEAR SIR:—Your letter received this morning. Am sorry my friend Dr. S. did not think to tell you to address me at Pittsburg, and your communication would have reached me in a few hours instead of days, as I seldom call at the village P. O.

You will address your orders for BETHESDA WATER to JOSEPH FLEMING, 84 Market Street, Pittsburg, Pa., and they will receive prompt attention. I say this on account of my business acquaintance with Mr. Fleming. I will call on him in the morning, and have him send you pamphlets and any information relative to the matter he may think required.

If my testimony regarding the efficacy of Bethesda Water was required, I could cite several cases of my own personal knowledge. I am convinced that it is a specific in diseases arising from a morbid condition of the kidneys, providing, of course, that the disease has not reached a point beyond the possibility of recovery, as in the case of my late brother, and even then no figures could estimate its value in giving relief from suffering. I have a friend who was under treatment of different physicians all last fall and winter, and apparently getting worse: I persuaded him to stop the treatment and use the "water," and before he had used ten (10) gallons he was much better, and now nearly if not quite well. The doctors would diagnose Phlebitis, but there was a low specific gravity of the urine and other indications of kidney or dropsical affection, which satisfied me that he needed the effects of the "water;" and the results are as stated, and the inflamed vein is getting well, as well as general improved health. It occurs to me, the duty of physicians to investigate such things, and if they contain medicinal virtues, to make it known to suffering humanity instead of standing aloof until men in other walks of life have long recognized and demanded its use. Of course, there are so many new remedies claimed that are worthless, that there is some excuse, yet this Bethesda Water has been in use more than ten (10) years, and comparatively few physicians appear to know anything about its properties. Although you are a stranger to me, allow me to commend you, or any worthy physician who is willing to investigate and test its claimed virtues, and if found, to disseminate the knowledge among their less fortunate fellows. Yours, truly,

W. J. THOMPSON.

P. S.—If you have occasion to address me further, send your letter to Auditor's Office, P. A. R. R., Pittsburg, Pa.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. Danforth, M.D., Pathology; John E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine, Daniel R. Brower, M.D., Secretary, Nervous and Mental Diseases; Sarah Hackett Stevenson, M.D., Corresponding Secretary, Physiology; David W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry; Wm. J. Maynard, A.M., M.D., Therapeutics and Dermatalogy; Wm. T. Montgomery, M.D., Eye and Ear; E. Fletcher Ingals, M.D., Diseases of Chest and Throat; John O. Hobbs, M.D., Demonstrator.

For information or announcement, address either of the Secretaries, at 125 State Street.

1141–1192 W. H. BYFORD, A.M., M.D., *President.*

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

Lecture Tickets, including matriculation, $45.

College, cor. of State and Sixth Sts.; Dean's Office, 181 E. State St.

Letters of inquiry should be addressed to the Dean.

Prof. FRANCIS CARTER, M.D., Dean, Columbus, Ohio.

1150–1201

Columbus Medical College.

Preliminary Course begins September 1st.

Regular Course October 1st, 1878, and closes the last week in February, 1879.

Tickets	$30.00
Matriculation	5.00
Graduation	25.00
Demonstrator	5.00

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

Office, 87 Clark St., Chicago.

1172–1197

ARTIFICIAL EYES.

The finest, best, and most natural Artificial Eyes in the world, inserted and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Sixth St., Philadelphia, General Agent for the United States of L. Mueller's Celebrated German Artificial Eyes, which received the Gold Medal at Berlin, Vienna, Philadelphia (1876), etc. 1142-tf

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,
192 and 194 Jackson St., Chicago, Ill.

HORSFORD'S
Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

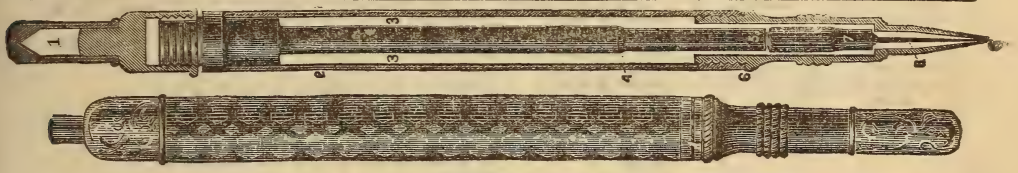
Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS,

1155-1206 **PROVIDENCE, R. I.**



THE MACKINNON PEN.

Will write 75 pages foolscap without refilling; abolishes steel or gold pens, pen holders, pencils and inkstands. Writes on any paper, with any clean ink. "The point of the pen is actually a ring of iridium," says the report of the Franklin Institute. Can be carried in the pocket or used at the desk. "Warranted to show no signs of wear in three years." No professional man should be without it. Examine it, at

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, NEW YORK.

ANNUAL ANNOUNCEMENT, 1879-80.

THE READING AND RECITATION TERM will commence October 1, 1879, and close at the beginning of the Regular Term. THE REGULAR TERM will open February 1, 1880, and continue five months.

SAMUEL G. ARMOR, M.D., LL.D., Professor of the Practice of Medicine, and Dean.
GEORGE W. PLYMPTON, A.M., Professor of Chemistry.
JOSEPH H. RAYMOND, M.D., Professor of Physiology.
DANIEL AYRES, M.D., LL.D., Emeritus Professor of Surgery.
ALEXANDER J. C. SKENE, M.D., Professor of Diseases of Women and Children.
EDWARD SEAMAN BUNKER, M.D., Professor of Obstetrics.
CORYDON L. FORD, M.D., Professor of Anatomy.
JARVIS S. WIGHT, M.D., Professor of Surgery, and Registrar.
JOHN D. RUSHMORE, M.D., Professor of Materia Medica.

THE CLINICAL ADVANTAGES OF THE LONG ISLAND COLLEGE HOSPITAL ARE UNSURPASSED IN THIS COUNTRY.

For Circulars, address DEAN or REGISTRAR. 1174-1226

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine,* in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.60 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

KEASBEY & MATTISON, Philadelphia.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS' Oval Shape, Compleie Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

GRANULATED EFFERVESCENT SALTS

PREPARED BY

WILLIAM R. WARNER & CO.,

CHEMISTS,

PHILADELPHIA.

Granulated Effervescent

VICHY SALT.

(Grand Grille.)

A large teaspoonful dissolved in half a glass of water, forms a grateful and refreshing draught, identical with the natural water. Per dozen, $4.00

Granulated Effervescent

SELTZER SALT.

A tablespoonful to half a glass of water forms a grateful and refreshing saline draught, identical with the natural water. Per Dozen, $4.00

Granulated Effervescent

SEIDLITZ MIXTURE.

(Seidlitz Powder, U. S. P.)

An excellent aperient and refrigerant, very acceptable to the stomach. Per doz. $4.00

DOSE.—One tablespoonful in a glass of water.

Granulated Effervescent

NITRATE of POTASSIUM.

A dessert-spoonful in glass of water makes an excellent mixture and effervescing draught. The diaphoretic and refrigerant effects are readily produced. Per dozen, $4.00

Granulated Effervescent

CITRATE OF POTASSIUM.

A dessert-spoonful in glass of water makes an excellent neutral mixture and effervescing draught. The diaphoretic and refrigerant effects are readily produced. Per dozen, $5.00

Granulated Effervescent

Bi-Carbonate of Potassium.

A dessert-spoonful in glass of water makes an excellent neutral mixture and effervescing draught. The diaphoretic and refrigerant effects are readily produced. Per dozen, $4.00

Granulated Effervescent

Pepsin, Bismuth and Strychnia.

Each drachm or heaping teaspoonful contains the dose of Saccharated Pepsin, soluble Citrate of Bismuth, and the sixtieth grain of Citrate of Strychnia. Per dozen, $10.00

Granulated Effervescent

PEPSIN AND BISMUTH.

Each drachm or heaping teaspoonful contains the dose of Saccharated Pepsin and soluble Citrate of Bismuth. Per doz. $9.00

Granulated Effervescent

CITRATE OF MAGNESIA.

(Pleasant and Efficient.)

For a purgative effect, take two or more tablespoonfuls added to a small glass of water, and drink while effervescing. As a laxative, one or more tablespoonfuls taken in the same manner. One or two teaspoonfuls in sweetened water, produces a delightful, cooling drink in summer. Per dozen, $4.00

Granulated Effervescent

CITRATE LITHIA.

Each drachm or teaspoonful contains four grains of the chemically pure salt. Valuable in Rheumatic, Gouty and Analogous disorders. Per dozen, $10.00

Granulated Effervescent

KISSINGEN SALT.

A large teaspoonful dissolved in half a glass of water, forms an agreeable and refreshing draught identical with the natural water. Per dozen, $4.00

Granulated Effervescent

CRAB ORCHARD SALT.

Prepared from the exact analysis of the purified natural salt, obtained from the Crab Orchard Spring, Ky.

A tablespoonful in half a glass of water forms a grateful effervescing draught, producing the effect of the natural water. Per dozen, $4.00

Granulated Effervescent

OXALATE OF CERIUM.

Each drachm or large teaspoonful contains two grains of Oxalate of Cerium. Per dozen, $5.00

Granulated Effervescent

CITRATE CAFFEINE.

A dessert-spoonful containing one grain of Citrate of Caffeine should be given for sick headache, every hour or two before and during the paroxysms. Per dozen, $10.00

Physicians will please specify Warner & Co.—Equal to best English.

FLUID EXTRACT COCA.

NERVINE, STIMULANT.

USED IN PERU AND BOLIVIA AS A MASTICATORY

This Extract contains the entire properties of the leaf of the **Erythroxylon Coca.**

COCA WINE.

This wine has been successfully used in France as a **Tonic**, and found very desirable where a more mild effect of the Coca than the Fluid Extract was desired.

FLUID EXTRACT OF FUCUS VESICULOSUS

(BLADDER WRACK).

SUCCESSFULLY USED FOR THE REDUCTION OF OBESITY.

It seems to have no appreciable effect on the general health other than the removal of the adipose tissue.

The above Extracts have been prepared by us, and special care given that their medical properties be not impaired.

FLUID EXTRACT OF VISCUM ALBUM,

THE NEW SUBSTITUTE FOR ERGOT.

PROF. LISTER'S ANTISEPTIC DRESSING,

PREPARED BY US.

We also have direct from Edinburgh Professor Lister's entire Antiseptic Dressing, consisting of Antiseptic Gauze, Mackintosh Cloth, Protection Silk, Carbolized Ligatures, and Spray Producers for Dr. Lister's Method.

CASWELL, HAZARD & CO.,

NEW YORK.

HUNYADI JANOS MINERAL WATER.

THE BEST AND CHEAPEST

NATURAL APERIENT.

THE BRITISH MEDICAL JOURNAL.

"HUNYADI JANOS.—The most agreeable, safest and most efficacious aperient water which has been brought under our notice."

LONDON MEDICAL RECORD.

"*Hunyadi Janos.*—The most pleasant and, owing to the smallness of its dose, the CHEAPEST of all the natural Aperient Waters."

THE LANCET.

"HUNYADI JANOS.—Baron Liebig affirms that its richness in aperient salts surpasses that of all other known waters."

From Prof. MACNAMARA, Prof. of Materia Medica, Royal College of Surgeons in Ireland.

"Far the most valuable and palatable of our Aperient Mineral Waters. I have been agreeably surprised with the result of a clinical investigation."

Specially approved by the Academy of Medicine of Paris, and its sale in France authorized by decree of the French Government.

Medals awarded: Lyons, 1872. Vienna, 1873. Paris, 1878.

USES OF HUNYADI JANOS ACCORDING TO OPINIONS OF EMINENT AUTHORITIES.	
1. For habitual constipation.	"None so prompt, mild, and can be so well borne for a length of time."—Prof. SPIEGELBERG, *University of Breslau.*
2. By persons inclined to obesity, congestive and gouty disorders.	"I have used the Hunyadi Janos water in many cases of the rheumatic and gouty diathesis with very marked benefit. In cases accompanied with great obesity I prefer it to any other laxative."—Prof. LEWIS A. SAYRE, M.D., *Bellevue Hospital, New York.* "Preferred to Friedrichshall and Pullna by those who have tried them."—Prof. AITKEN, F.R.S., *Netley.* "Of great use in catarrhal conditions of the pile-ducts and bowels, and for CONGESTION of the LIVER and OTHER ORGANS."—*Medical Times and Gazette.*
3. In chronic affections of the organs of respiration and Circulation.	"Produces remarkable relief in chronic diseases symptomatic of affections of the abdominal and thoracic organs, and in serous effusions with impediment of respiration and circulation."—Prof. ALOIS MARTIN, *Royal Medical Councillor, University of Munich.*
4. Against hæmorrhoids, and portal and hepatic congestion.	"The most certain and the most comfortable in its action of all the aperient waters. The special indications for its use are, in costiveness (especially in that of pregnancy) in portal congestion with tendency to hæmorrhoids, and in sluggish action of the liver."—Inspector-General MACPHERSON, M.D., *Author of "Baths and Wells of Europe."*
5. During pregnancy; for nursery use; and in many female disorders.	"I prescribe none but this."—Baron v. SCANZONI, *Wurzburg.* "I prefer this to any and every other."—Dr. MARION SIMS, *New York, Honorary Fellow Obstetrical Society of London and Dublin.*
6. In bilious attacks and sick headaches.	"I have made use of the Hunyadi Janos mineral water ever since its introduction into this country, and with ever increasing satisfaction. It is highly beneficial to persons of sedentary habit, and in what are called bilious attacks."—Dr. SILVER, *Lecturer on Clinical Medicine, Charing-Cross Hospital.*
7. Against evil consequences of indiscretion in Diet.	"Has invariably good and prompt success: a most valuable item in the balneological treasury."—Prof. VIRCHOW, *Berlin.*

For ordinary aperient purposes a half wineglassful of the Hunyadi Water may be taken at bed-time, or a wineglassful taken in the morning fasting. It is most efficacious when warmed to a temperature not below 60 deg., or when an equal quantity of hot water is added to it.

HUNYADI JANOS MINERAL WATER.

SUGAR-COATED PILLS.

WHAT WE CLAIM.

FOR THE PILLS OF OUR MANUFACTURE, WE CLAIM AS OF CHIEF IMPORTANCE:

FIRST.—That they are manufactured of the *purest* and most *reliable* ingredients.

SECOND.—That they are composed *absolutely* according to the formula on the label.

THIRD.—That they are *readily soluble* in the fluids of the stomach.

FOURTH.—That they are *at least as permanent* as any other pills manufactured.

FIFTH.—That they are *more uniform* in size and of *better finish* than those of any other manufacturer.

SIXTH.—That they are offered at as *low a figure as is compatible with their quality.*

We ask special attention to the prices of our pills of PHOSPHORUS AND ITS COMBINATIONS. While fully satisfied that they are *equal to any* in the market, we furnish them at *reasonable figures*—commensurate with their cost—instead of holding them at *fancy* prices.

No one will dispute the assertion that drugs ought to be what they are represented to be. Physicians, druggists, and patients are interested that a high standard of excellence should be maintained in all pharmaceutical preparations.

We earnestly solicit the most rigid tests of our manufactures—by comparison, by analysis, by every means available. We assert *absolute integrity* in all of our products, and are willing to be judged by the result of any fair investigation.

CATALOGUE OF OUR PREPARATIONS MAILED UPON APPLICATION.

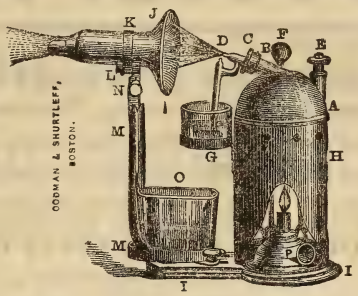
CODMAN & SHURTLEFF'S

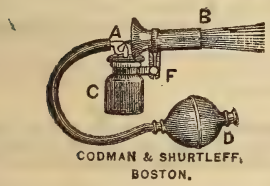
ATOMIZING APPARATUS.

PRICES REDUCED.

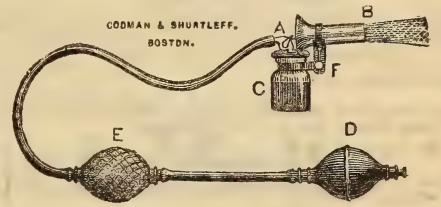


THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.
Brass parts, nickel-plated, additional, $2.00.
Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.



THE BOSTON ATOMIZER. (Patented.)



SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.
The Bulbs are adapted to all the Atomizing Tubes made by us.
Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*
Atomizer by Compressed Air, with Regulating Self-acting Cut-off		*45.00*
Dr. Oliver's Atomizer		*4.00*
Dr. Clarke's Atomizer	(Postage 20)	*3.00*
The Constant Atomizer	(" 20)	*3.00*
Dr. Knight's Atomizer	(" 12)	*2.50*
The Boston Atomizer (See Cut)	(" 16)	*2.50*
Atomizing Tubes in great variety		*25 cents to 15.00*

For full description see NEW PAMPHLET on Atomization of Liquids with Formulæ of many articles of the Materia Medica successfully employed in the practice of a well-known American practitioner, together with descriptions of the best forms of apparatus, which will be sent, post-paid, on application.

Plaster Bandages and Bandage Machines, Articles for Antiseptic Surgery, Aspirators, Clinical Thermometers, Crutches, Air Cushions, Wheel Chairs and Articles for Invalids, Mechanical Appliances for all deformities and deficiencies. Trusses, Elastic Hose, etc. Electric Instruments for all Medical and Surgical uses, Hypodermic Syringes, Ice and Hot Water Bags, Manikins, Models, Skeletons, Skulls, etc., etc. Naturalists' Instruments, Sphygmographs, Splints and Fracture Apparatus, Stethoscopes, Syringes of all kinds, Teeth Forceps, Test Cases, Transfusion Instruments, French Rubber Urinals, Urinometers, Vaccine Virus, Veterinary Instruments, Waldenburg's Pneumatic Apparatus, etc., etc.
Surgical Instruments and Medical Appliances of every description promptly repaired.
Having our Factory, with steam power, ample machinery, and experienced workmen, connected with our store, we can promptly make to order, in the best manner, and from almost any material, new instruments and apparatus, and supply new inventions on favorable terms. Instruments bearing our name are fully warranted. With hardly an exception they are the product of our own factory, and made under our personal supervision, by skilled workmen, who, being paid for their time, are not likely to slight their work through haste.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVREE, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz. $1.00
" (" ").....per doz. 10.00
" (in ½ lb ").....per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

L. REICH,

DIRECT IMPORTER OF THE CHOICEST AND PUREST

Hungarian WINES

EVER BROUGHT TO THIS COUNTRY,

STRICTLY FOR MEDICINAL USE.

13 West 11th St., New York.

Mr. REICH will be pleased to see those of the Medical Profession who may desire to avail themselves of the opportunity of procuring **STRICTLY FIRST-CLASS WINES**, which have received the endorsement of the most eminent Medical men of the country, as is evidenced from the following letters of commendation which have been received:—

This is to certify, that I have examined Mr. L. REICH'S TOKAYER AUSBRUCH, TOKAYER MASLAS and BUDAI IMP. I take great pleasure in commending these Wines to the Medical Profession because of their purity.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. of Chem. and Toxicology in Bellevue Hosp. Med. Col., and Prof. of Chem. and Physics in Col. City of New York.

We have used in our practice the Hungarian Wines sold by Mr. LORENZ REICH, who puts them on the market unadulterated, just as they are imported. To this fact we attribute their great value as a medicine in diseases where such tonics are indicated, especially in those which are attended by defective digestion and imperfect assimilation. We cordially recommend Mr. REICH and his Wines to our professional brethren.

NOTICE.—My wines are not for sale in any drug store or by dealers. To be obtained only by direct application to

1129-tfm **L. REICH, 13 West 11th St., bet. Broadway and University Place, New York.**

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page 58 of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice :— **Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College), **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

1166-1217

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 JACKSON STREET, CHICAGO, ILL.

Our valuable pamphlet "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

MIAMI MEDICAL COLLEGE OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.	

JOHN A. MURPHY, M.D., Dean, 163 *West Seventh Street.*
WM. H. TAYLOR, M.D., Secretary, 329 *West Seventh Street.*

EDMUND ANDREWS, A.M., M.D., } Professors of Principles and Practice of Surgery, and of Clinical Surgery.
RALPH N. ISHAM, M.D., }

EDWARD W. JENKS, M.D., LL.D., Professor of Medical and Surgical Diseases of Women, and of Clinical Gynecology.

E. O. F. ROLER, A.M., M.D., Professor of Obstetrics and Diseases of Children.

SAMUEL J. JONES, A.M., M.D., Professor of Ophthalmology and Otology.

J. , HOLLISTER, M.D., Cor. Secretary & Registrar, Professor of General Pathology and Pathological Anatomy.

J. S. JEWELL, A.M., M.D., Professor of Nervous and Mental Diseases.

H. P. MERRIMAN, A.M., M.D., Professor of Medical Jurisprudence and Hygiene.

WM. E. QUINE, M.D., Professor of Materia Medica and General Therapeutics.

MARCUS P. HATFIELD, A.M., M.D., Professor of Chemistry and Toxicology.

LESTER CURTIS, A.M., M.D., Professor of Histology.

R. L. REA, M.D., Professor of Anatomy.

HENRY GRADLE, M.D., Lecturer upon Physiology.

ROSWELL PARK, A.M., M.D., Demonstrator of Anatomy and Assistant to the Chair of Anatomy.

GRADED COURSE OF INSTRUCTION.

A graded system of medical instruction was adopted at the organization of this College, twenty years ago and for twelve years it was the only representative of a classified course in this country. The recommendation of this method of teaching by two Medical College Conventions, by the American Medical Association, and by various State Medical Societies; and its more recent adoption by a number of other colleges, including some of the most prominent ones in the land; and its very general approval by the profession at large, afford gratifying evidence that this new departure was a movement in the right direction.

REQUIREMENTS FOR ADMISSION.

All applicants for admission are required to present evidence of graduation in some literary college, or certificates of attendance upon some scientific school or academy. If the applicant have neither diploma nor certificate, he must sustain a satisfactory examination as to his literary qualifications.

ADVANCED STANDING.

Students who have read medicine for one full year may enter upon the *Middle Course*, by sustaining satisfactory examinations upon studies embraced in the Junior Course.

Students who have read medicine for two years, including attendance upon one full course of lectures in some recognized medical college, may enter the *Senior Course*, by sustaining examinations upon the subjects embraced in the Junior and Middle Courses.

THE COLLEGE TERM.

A Preliminary course of Didactic and Clinical instruction, introductory to the general course, commences September 16th and continues till the commencement of the regular Session.

THE REGULAR COURSE of lectures commences Tuesday, September 30th, and will continue until March 30th, at which time the usual Commencement exercises will be held.

THE PRACTITIONERS' COURSE,

Designed for practitioners, will commence March 31st, 1880, following the Commencement, and will continue till April 28th. This special course is arranged to meet a very general want, and will afford special advantages for a *rapid*, yet *thorough*, practical review of the most important subjects in medicine and surgery.

CLINICAL ADVANTAGES.

Mercy Hospital, with its very perfect appointments; the Dispensary and the College clinics, offer an abundance of clinical material in every department of Medical and Surgical teaching. Over fourteen thousand patients were treated here during the *last year*.

In the Hospital every Senior student serves as dresser for an allotted term in the surgical wards, and receives a certificate to that effect.

Every Senior student has personal charge of one or more cases of obstetrics, under the immediate supervision of the Professor of obstetrics.

In the Gynecological Department, where large numbers of females apply for local treatment, each Senior student is trained by the Professor in the minute details of examination and treatment of the medical and surgical diseases of women.

PHYSIOLOGICAL LABORATORY.

Aided by the generous contributions of its alumni, this College is developing a PHYSIOLOGICAL LABORATORY, which will be opened for instruction during the present year.

PRIZES

Will be given by the Dean, for the best Thesis; by the Professor of Anatomy, a First Prize to the best Anatomist—open to all classes; Second Prize to the best Anatomist in the Junior Class; the Senn Prize, for the best Anatomical Preparation; and the Earl Prize, for the best Essay on Diseases of Children.

FEES.

Lecture Fees for the College Year, $75.00. Practitioners' Course, $30.00. Graduation Fee, $30.00. Registration Fee, $5.00. Demonstrator's Ticket, $5.00. Laboratory Ticket, $5.00. Hospital Ticket $6.00.

Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

Jefferson

MEDICAL COLLEGE

PHILADELPHIA.

The Fifty-fifth Session of the Jefferson Medical College will begin on Wednesday, October 1st, 1879, and will continue until the 1st of March, 1880. Preliminary Lectures will be held from Monday, 8th of September.

PROFESSORS.

JOSEPH PANCOAST, M.D.,
General, Descriptive and Surgical Anatomy (Emeritus).

S. D. GROSS, M.D., L.L.D., D.C.L., Oxon.,
Institutes and Practice of Surgery.

ELLERSLIE WALLACE, M.D.,
Obstetrics and Diseases of Women and Children.

J. M. DA COSTA, M.D.,
Practice of Medicine.

J. AITKIN MEIGS, M.D.,
Institutes of Medicine and Medical Jurisprudence.

WM. H. PANCOAST, M.D.,
General, Descriptive and Surgical Anatomy.

ROBERT E. ROGERS, M.D.,
Medical Chemistry and Toxicology.

ROBERTS BARTHOLOW, M.D.,
Materia Medica and General Therapeutics.

Clinical Instruction is given *daily* at the **Hospital of the Jefferson Medical College** throughout the year, by Members of the Faculty, and by the Hospital Staff, which is constituted as follows:

SURGEONS.

JOHN H. BRINTON, M.D.,
S. W. GROSS, M.D.,
R. J. LEVIS, M.D.

OPHTHALMIC SURGEON.

WILLIAM THOMPSON, M.D.

AURAL SURGEON.

L. TURNBULL, M.D.

PHYSICIANS.

J. SOLIS-COHEN, M.D.,
JAMES C. WILSON, M.D.,
OLIVER P. REX, M.D.,
W. W. VANVALZAH, M.D.

GYNÆCOLOGISTS.

F. H. GETCHELL, M.D.,
J. EWING MEARS, M.D.

PATHOLOGIST.

MORRIS LONGSTRETH, M.D.

A Summer Course of Lectures is given, beginning in the third week in March, 1880, and extending through the months of April, May, and to the middle of June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay thirty-five dollars, which is, however, credited on the amount of fees paid for the ensuing Winter Course.

FEES.

MATRICULATION FEE (paid once), . .	$ 5.00	PRACTICAL ANATOMY, ...	$10.00
TICKET OF EACH PROFESSOR (7) $20, .	140.00	GRADUATION FEE, ...	20.00

The Annual Announcement, giving full particulars, will be sent on application to

ELLERSLIE WALLACE, Dean.

BETHESDA WATER.

BELLEVUE, PA., May 21st, 1879.

W. B. HYATT, M.D.,

Marshallville, Wayne Co., Ohio.

DEAR SIR:—Your letter received this morning. Am sorry my friend Dr. S. did not think to tell you to address me at Pittsburg, and your communication would have reached me in a few hours instead of days, as I seldom call at the village P. O.

You will address your orders for BETHESDA WATER to JOSEPH FLEMING, 84 Market Street, Pittsburg, Pa., and they will receive prompt attention. I say this on account of my business acquaintance with Mr. Fleming. I will call on him in the morning, and have him send you pamphlets and any information relative to the matter he may think required.

If my testimony regarding the efficacy of Bethesda Water was required, I could cite several cases of my own personal knowledge. I am convinced that it is a specific in diseases arising from a morbid condition of the kidneys, providing, of course, that the disease has not reached a point beyond the possibility of recovery, as in the case of my late brother, and even then no figures could estimate its value in giving relief from suffering. I have a friend who was under treatment of different physicians all last fall and winter, and apparently getting worse: I persuaded him to stop the treatment and use the "water," and before he had used ten (10) gallons he was much better, and now nearly if not quite well. The doctors would diagnose Phlebitis, but there was a low specific gravity of the urine and other indications of kidney or dropsical affection, which satisfied me that he needed the effects of the "water;" and the results are as stated, and the inflamed vein is getting well, as well as general improved health. It occurs to me, the duty of physicians to investigate such things, and if they contain medicinal virtues, to make it known to suffering humanity instead of standing aloof until men in other walks of life have long recognized and demanded its use. Of course, there are so many new remedies claimed that are worthless, that there is some excuse, yet this Bethesda Water has been in use more than ten (10) years, and comparatively few physicians appear to know anything about its properties. Although you are a stranger to me, allow me to commend you, or any worthy physician who is willing to investigate and test its claimed virtues, and if found, to disseminate the knowledge among their less fortunate fellows.

Yours, truly,

W. J. THOMPSON.

P. S.—If you have occasion to address me further, send your letter to Auditor's Office, P. A. R. R., Pittsburg, Pa.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. Danforth, M.D., Pathology; John E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine, Daniel R. Brower, M.D., Secretary, Nervous and Mental Diseases; Sarah Hackett Stevenson, M.D., Corresponding Secretary, Physiology; David W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry; Wm. J. Maynard, A.M., M.D., Therapeutics and Dermatalogy; Wm. T. Montgomery, M.D., Eye and Ear; E. Fletcher Ingals, M.D., Diseases of Chest and Throat; John O. Hobbs, M.D., Demonstrator.

For information or announcement, address either of the Secretaries, at 125 State Street.

1141-1192 W. H. BYFORD, A.M., M.D., *President.*

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

Lecture Tickets, including matriculation, $45.

College, cor. of State and Sixth Sts.; Dean's Office, 181 E. State St.

Letters of inquiry should be addressed to the Dean.

Prof. FRANCIS CARTER, M.D., Dean, Columbus, Ohio.
1150-1201

Columbus Medical College.

Preliminary Course begins September 1st.

Regular Course October 1st, 1878, and closes the last week in February, 1879.

Tickets	*$30.00*
Matriculation	*5.00*
Graduation	*25.00*
Demonstrator	*5.00*

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

Office, 87 Clark St., Chicago.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,
192 and 194 Jackson St., Chicago, Ill.

HORSFORD'S
Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

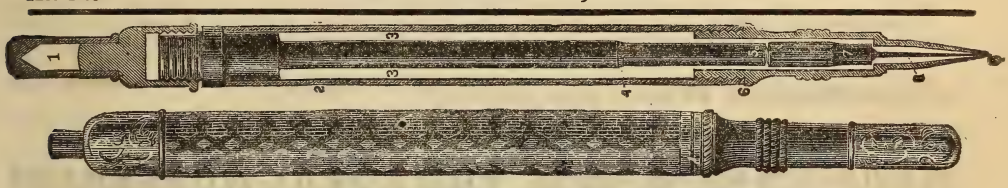
Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS,

1155-1206 PROVIDENCE, R. I.



THE MACKINNON PEN.

Will write 75 pages foolscap without refilling; abolishes steel or gold pens, pen holders, pencils and inkstands. Writes on any paper, with any clean ink. "The point of the pen is actually a ring of iridium," says the report of the Franklin Institute. Can be carried in the pocket or used at the desk. "Warranted to show no signs of wear in three years." No professional man should be without it. Examine it, at

H. VAN ALLEN, Agent. 1172-1184

BORHEK'S, 628 CHESTNUT ST., PHILADELPHIA.

LONG ISLAND COLLEGE HOSPITAL, BROOKLYN, NEW YORK.

ANNUAL ANNOUNCEMENT, 1879-80.

THE READING AND RECITATION TERM will commence October 1, 1879, and close at the beginning of the Regular Term. THE REGULAR TERM will open February 1, 1880, and continue five months.

SAMUEL G. ARMOR, M.D., LL.D., Professor of the Practice of Medicine, and Dean.
GEORGE W. PLYMPTON, A.M., Professor of Chemistry.
JOSEPH H. RAYMOND, M.D., Professor of Physiology.
DANIEL AYRES, M.D., LL.D., Emeritus Professor of Surgery.
ALEXANDER J. C. SKENE, M.D., Professor of Diseases of Women and Children.
EDWARD SEAMAN BUNKER, M.D., Professor of Obstetrics.
CORYDON L. FORD, M.D., Professor of Anatomy.
JARVIS S. WIGHT, M.D., Professor of Surgery, and Registrar.
JOHN D. RUSHMORE, M.D., Professor of Materia Medica.

THE CLINICAL ADVANTAGES OF THE LONG ISLAND COLLEGE HOSPITAL ARE UNSURPASSED IN THIS COUNTRY.

For Circulars, address DEAN or REGISTRAR. 1174-1226

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more viable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS' Oval Shape. Complete Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

"..... The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

New York.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. **"Queen of Table Waters."**—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

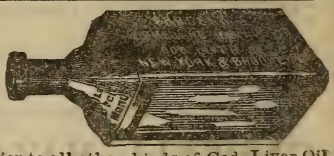
HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

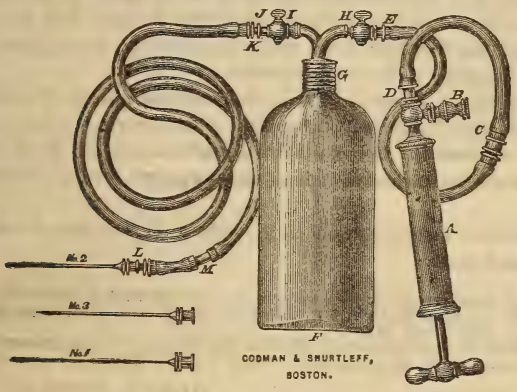

Fig. 68.

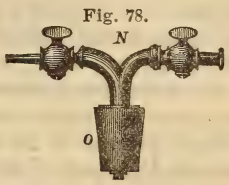
Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

Fig. 77.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain)*,	$1.00
"	"	"	*Pyrophosphate of Iron (Ferrated)*,	1.00
"	"	"	*Cod Liver Oil*,	1.00
"	"	"	*Cod Liver Oil and Iodide of Iron*,	1.00
"	"	"	*Cod Liver Oil and Phosphorus*,	1.00
"	"	"	*Hypophosphites*,	1.50
"	"	"	*Iodides*,	1.50
"	"	"	*Alteratives*,	1.50
"	"	"	*Citrate of Iron and Quinia*,	1.50

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

'THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

The Preliminary Term of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

The Regular Winter Session will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

WM. H. TAYLOR, M.D., Secretary, 329 West Seventh Street.

1160-1185

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page 58 of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice :— **Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

A MANUAL OF

EXAMINATION OF THE EYES.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

BY DR. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America. We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day. This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and relations of the optic nerve and its sheaths. I believe that it is unique; at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime importance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

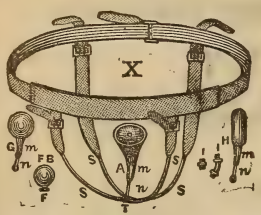
PUBLISHED AND FOR SALE BY

D. G. BRINTON,

115 South Seventh Street, Philadelphia.

STAUFFER'S
HARD RUBBER INSTRUMENTS AND PRICE LIST.

SERIES OF UTERINE SUPPORTERS. 1.



Spring Stem Cup A.—Complete on Belt X, $7.00; on XX, $9.00; on Y, $8.00; and on Z, $6 00. Without belt on SS, $5.00.

Anteversion C, Globe Top G, and Oblong H, in price the same as A, with similar attachments.

Retroversion E, on Belt X, $8 00; on XX, $10.00; on Y, $9.00; and on Z $7.00. Without Belt $6.00

Duplicate Cups—A, $2.00; E, $3 00; Globe Tops G, with attachments to screw on A or E Stem $2.00.

P. S.—Shifting Top, with solid or no Spring Stem, 50 cents less on either belt. No Shifting Top Stem sold alone.

Self-Sustaining Globe B, or Cup D, $1.50 each.

Gums are mailed, 2 at 20 cts; 4 at 35 cts; and Springs at 3 cts. each.

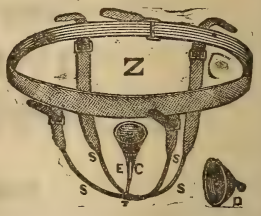
Abdominal Supporters. 2. 3.

Price, $4.00. Price, $3.00.

SPECULUMS AND CASE. 6.

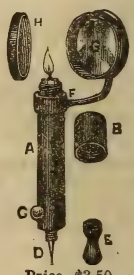
Prices.—The series encased, $14.00. With complete but non-shifting conductor, $2.50 each. Flesh color enameled inside.

SOLID STEM CUP SUPPORTER. E. C. 5.



Price, $4.50. Including Cup D, $6.00. Or E C, on Abdominal Belt X, $5.50. X X, $7.50. Y, $6.50. Including D, on each, $1.50 extra.

REFLECTOR, OR DENTISTS' LIGHT. 10.



Price, $3.50.

Rectum Supporter and Ointment Holder. 4.

$3.50.

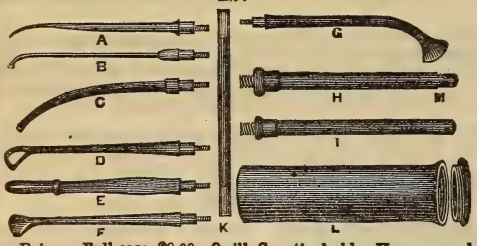
STEM LEVERS. 14.

$4.50 on Z, $7.00 on X.

Permanent Stem I—The same in price as E C, Fig. 5, on all the belts.

Spring Stem J—The same as Spring Stem Cup A, Fig. 1, on either belt.

HARD RUBBER UTERINE EXAMINING CASE. 12.



Prices.—Full case, $8.00; Quill Caustic holder H, or camel hair brush holder and case I, each $1.00. Any two of the first seven, with centre piece K, $2.50.

Fenestrated Vaginal and Anal. 7.

Prices.—Vaginal T, $2.00. Anal U, $1.50.

Caustic Bottle and Case. 11.

Price, $1.50.

Hymen—Pointed. 8.

Price, $1.50.

Vaginal and Vulva Dilator. 9.

Price, $1.50.

STAUFFER'S NON-EVAPORATING INKSTAND.

Price, $1.00.

Price, $1.00. 15.

13.

Supporters E. C. or Economy.—Fig 5, on its elastic belt Z, is the least in price, and by the oblique construction of the cup sets direct within the angle of the axis of the uterus and vagina, (well seen by IU. Fig. 13.) If properly selected, or made so by the exchange privilege, (which admits the interchange of all the hard rubber parts in the catalogue, to cover the purchaser's risk.) It is warranted to correct and sustain even any ***Procidentia.*** The spring stems and shifting tops with their supplements, Fig. 1. Also, improved ***Retroversion, Cup E. Anterversion C.*** and ***Intra-Uterine Stem Cup, IU,*** Fig. 13. The stem locks in a square socket after the cup is in position, and is supported on the elastic gums SS, as A Fig. 1, and same in price. Stem Levers, Fig. 14, etc. All are fully explained in the catalogue. The ***Series*** comprises upwards of 150 in style and size instruments, of which two-thirds belong to the support and correction of the uterus. ***Speculums***—Thomas' objections p. 67—'76, are by them completely overcome. The case contains four. The clear and large view, and facility to work through them, far exceeds any other. The ***Ex. Case,*** and physician's favorite, is admirably represented by Fig. 12—weight but 4 oz. ***Catalogue*** sent free on application. In addition to the description of the above series of instruments, it contains important information on this line of treatment.

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

LESSONS IN GYNECOLOGY.

By WM. GOODELL, A.M., M.D.,

Professor of Clinical Gynecology in the University of Pennsylvania.

WITH NUMEROUS ILLUSTRATIONS.

1 Vol., 8vo. Price, Cloth, $3.00.

This entirely new and complete work by this distinguished author cannot fail to prove a valuable addition to gynecological literature. The following table of contents will indicate its scope:—

Lesson	I.	Gynecological Instruments.
"	II.	Caruncle, and other Affections of the Female Urethra.
"	III.	Vesical Diseases of Women.
"	IV.	Fistulæ of the Female Genital Organs.
"	V.	Closure of the Vulva for Incurable Vesico-vaginal Fistulæ—Tumors of the Vulva.
"	VI.	On the Causes, Prevention, and the Cure of Lacerations of the Female Perineum; the Primary Operation.
"	VII.	Secondary Operation for Laceration of the Female Perineum.
"	VIII.	Local and Constitutional Treatment for Chronic Metritis and Endometritis.
"	IX.	Retroversions and Retroflexions of the Womb.
"	X.	Anteversions and Anteflexions of the Womb.
"	XI.	Dilatation of Cervical Canal; Rapid Dilatation; Tents.
"	XII.	On the Use of the Closed Lever Pessary, and of the Intra-uterine Stem Pessary.
"	XIII.	Different Kinds of Pessaries; Abdominal Supporters.
Lesson	XIV.	Prolapse of the Womb; Prolapse from Simple Descent; Prolapse from Hypertrophic Elongation of the Infra-vaginal portion of Cervix.
"	XV.	Prolapse of the Womb from Hypertrophic Elongation of the Supra-vaginal Portion of the Cervix.
"	XVI.	Laceration of the Cervix Uteri.
"	XVII.	Cancer of the Womb.
"	XVIII.	Vegetations of the Endometrium.
"	XIX.	Polypus of the Womb.
"	XX.	Fibroid Tumors of the Womb.
"	XXI.	Treatment of Fibroid Tumors of the Womb.
"	XXII.	Spaying for Fibroid Tumors, and for other Diseases of the Womb.
"	XXIII.	Ovarian Cyst; its Diagnosis, and its Treatment by Tapping, by injections of Iodine, and by Drainage.
"	XXIV.	Ovariotomy by Abdominal Section.
"	XXV.	Vaginal Ovariotomy.
"	XXVI.	Nerve-tire and Womb-ills, or the Relation which the Nerves bear to the Diseases of Women.
"	XXVII.	The Prevention of Uterine Disorders.
"	XXVIII.	The Sexual Relations as Causes of Uterine Disorders.

NOTICES OF THE PRESS.

"As a work for practitioners, this book has no equal. Dr. Goodell, by his great industry, accurate observations and study, and his always practical suggestions, has justly won for himself in America a name, as a practical gynecologist, second only to that of the ever illustrious Sims. Hence this book must be in the hands of every gynecologist, as it should be thoroughly read by every practitioner."—*Virginia Medical Monthly*, August, 1879.

"An extremely practical book. . . It has a decided originality. . . We can mention larger, more thorough and exhaustive books, but we know none more useful or more reliable."—*The American Practitioner.*

"Every chapter is replete with the most practical suggestions in diagnosis and treatment."—*Cincinnati Lancet and Observer*, August, 1879

"These Lessons are in the highest style of clinical art, comprehensive, clear, and eliciting all the interest which a thorough knowledge of the subject and a thorough master of the pen could bring forth."—*Louisville Medical News.*

PHILADELPHIA.

BETHESDA WATER.

BELLEVUE, PA., May 21st, 1879.

W. B. HYATT, M.D.,
Marshallville, Wayne Co., Ohio.

DEAR SIR:—Your letter received this morning. Am sorry my friend Dr. S. did not think to tell you to address me at Pittsburg, and your communication would have reached me in a few hours instead of days, as I seldom call at the village P. O.

You will address your orders for BETHESDA WATER to JOSEPH FLEMING, 84 Market Street, Pittsburg, Pa., and they will receive prompt attention. I say this on account of my business acquaintance with Mr. Fleming. I will call on him in the morning, and have him send you pamphlets and any information relative to the matter he may think required.

If my testimony regarding the efficacy of Bethesda Water was required, I could cite several cases of my own personal knowledge. I am convinced that it is a specific in diseases arising from a morbid condition of the kidneys, providing, of course, that the disease has not reached a point beyond the possibility of recovery, as in the case of my late brother, and even then no figures could estimate its value in giving relief from suffering. I have a friend who was under treatment of different physicians all last fall and winter, and apparently getting worse: I persuaded him to stop the treatment and use the "water," and before he had used ten (10) gallons he was much better, and now nearly if not quite well. The doctors would diagnose Phlebitis, but there was a low specific gravity of the urine and other indications of kidney or dropsical affection, which satisfied me that he needed the effects of the "water;" and the results are as stated, and the inflamed vein is getting well, as well as general improved health. It occurs to me, the duty of physicians to investigate such things, and if they contain medicinal virtues, to make it known to suffering humanity instead of standing aloof until men in other walks of life have long recognized and demanded its use. Of course, there are so many new remedies claimed that are worthless, that there is some excuse, yet this Bethesda Water has been in use more than ten (10) years, and comparatively few physicians appear to know anything about its properties. Although you are a stranger to me, allow me to commend you, or any worthy physician who is willing to investigate and test its claimed virtues, and if found, to disseminate the knowledge among their less fortunate fellows.

Yours, truly,
W. J. THOMPSON.

P. S.—If you have occasion to address me further, send your letter to Auditor's Office, P. A. R. R., Pittsburg, Pa.

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

Office, 87 Clark St., Chicago.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

HORSFORD'S

Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS,

PROVIDENCE, R. I.

1155–1206

THE MACKINNON PEN.

Will write 75 pages foolscap without refilling; abolishes steel or gold pens, pen holders, pencils and inkstands. Writes on any paper, with any clean ink. "The point of the pen is actually a ring of iridium," says the report of the Franklin Institute. Can be carried in the pocket or used at the desk. "Warranted to show no signs of wear in three years." No professional man should be without it. Examine it, at

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine,* in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.60 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS' Oval Shape. Complete Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

HUNYADI JANOS MINERAL WATER.

THE BEST AND CHEAPEST NATURAL APERIENT.

THE BRITISH MEDICAL JOURNAL.

"HUNYADI JANOS.—The most agreeable, safest and most efficacious aperient water which has been brought under our notice."

THE LANCET.

"HUNYADI JANOS.—Baron Liebig affirms that its richness in aperient salts surpasses that of all other known waters."

LONDON MEDICAL RECORD.

"*Hunyadi Janos.*—The most pleasant and, owing to the smallness of its dose, the CHEAPEST of all the natural Aperient Waters."

From Prof. MACNAMARA, Prof. of Materia Medica, Royal College of Surgeons in Ireland.

"Far the most valuable and palatable of our Aperient Mineral Waters. I have been agreeably surprised with the result of a clinical investigation."

Specially approved by the Academy of Medicine of Paris, and its Sale in France authorized by decree of the French Government.

Medals awarded: Lyons, 1872. Vienna, 1873. Paris, 1878.

USES OF HUNYADI JANOS	ACCORDING TO OPINIONS OF EMINENT AUTHORITIES.
1. For habitual constipation.	"None so prompt, mild, and can be so well borne for a length of time."—Prof. SPIEGELBERG, *University of Breslau.*
2. By persons inclined to obesity, congestive and gouty disorders.	"I have used the Hunyadi Janos water in many cases of the rheumatic and gouty diathesis with very marked benefit. In cases accompanied with great obesity I prefer it to any other laxative."—Prof. LEWIS A. SAYRE, M.D., *Bellevue Hospital, New York.* "Preferred to Friedrichshall and Pullna by those who have tried them."—Prof. AITKEN, F.R.S., *Netley.* "Of great use in catarrhal conditions of the pile-ducts and bowels, and for CONGESTION of the LIVER and OTHER ORGANS."—*Medical Times and Gazette.*
3. In chronic affections of the organs of respiration and Circulation.	"Produces remarkable relief in chronic diseases symptomatic of affections of the abdominal and thoracic organs, and in serous effusions with impediment of respiration and circulation."—Prof. ALOIS MARTIN, *Royal Medical Councillor, University of Munich.*
4. Against hæmorrhoids, and portal and hepatic congestion.	"The most certain and the most comfortable in its action of all the aperient waters. The special indications for its use are, in costiveness (especially in that of pregnancy), in portal congestion with tendency to hæmorrhoids, and in sluggish action of the liver."—Inspector-General MACPHERSON, M.D., *Author of "Baths and Wells of Europe."*
5. During pregnancy; for nursery use; and in many female disorders.	"I prescribe none but this."—Baron v. SCANZONI, *Wurzburg.* "I prefer this to any and every other."—Dr. MARION SIMS, *New York, Honorary Fellow Obstetrical Society of London and Dublin.*
6. In bilious attacks and sick headaches.	"I have made use of the Hunyadi Janos mineral water ever since its introduction into this country, and with ever increasing satisfaction. It is highly beneficial to persons of sedentary habit, and in what are called bilious attacks."—Dr. SILVER, *Lecturer on Clinical Medicine, Charing-Cross Hospital.*
7. Against evil consequences of indiscretion in Diet.	"Has invariably good and prompt success: a most valuable item in the balneological treasury."—Prof. VIRCHOW, *Berlin.*

For ordinary aperient purposes a half wineglassful of the Hunyadi Water may be taken at bed-time, or a wineglassful taken in the morning fasting. It is most efficacious when warmed to a temperature not below 60 deg., or when an equal quantity of hot water is added to it.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

"By immediate contact with the air cells and passages, instant relief is given."—Dr. LATHAM, *Physician to the Queen.*

"A remedy of great power and usefulness in Asthma, Chronic Bronchitis, etc."—Dr. W. BARKER.

"The Smoke causes no nausea. I have never known an instance in which relief was not obtained." GENERAL ALEXANDER.

In Tins, for use by means of a pipe, Cigars and Cigarettes, and Pastilles, for Inhalation.

SAVORY & MOORE, 143 New Bond Street, London.

Agents for America, E. FOUGERA & CO., NEW YORK.

NEW HYPODERMIC SYRINGES.

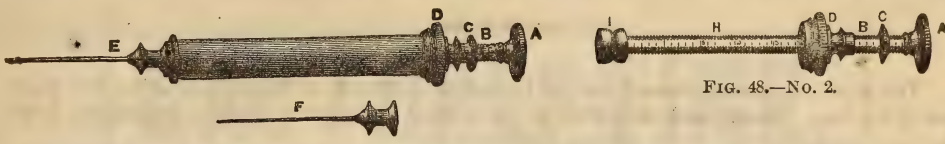

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3 50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02

No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).

No. 11.

As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case ..... *$3.50* Postage. .02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expenses of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain)*,	- - - - - - -	$1.00

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE	(in oz. bottles).....	per oz. $1.00
"	" ").....	per doz. 10.00
"	(in ½ lb ").....	per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,

Our valuable pamphlet "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

MIAMI MEDICAL COLLEGE OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

The Preliminary Term of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

The Regular Winter Session will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD**: "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page 58 of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 106] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice :— **Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

1166-1217

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

A MANUAL OF

EXAMINATION OF THE EYES.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

BY DR. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America. We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day. This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and relations of the optic nerve and its sheaths. I believe that it is unique; at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime inportance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

OPERATIVE SURGERY.

The course of Instruction in Operative Surgery, Bandaging, Fracture Dressing, application of apparatus for deformities, &c., will begin at the

Philadelphia School of Anatomy and Operative Surgery,

1022 AND 1024 HUNTER STREET,

Early in October, and continue during the fall and winter months. For information apply to

1176-79. *J. M. BARTON, M.D., 1344 Spruce St.*

SECOND EDITION

OF

DR. L. TURNBULL'S

MANUAL OF ANÆSTHETIC AGENTS,

And their Employment in the Treatment of Disease,

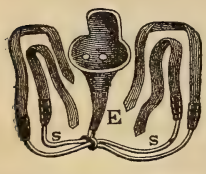
With 322 Pages and 27 Illustrations.

PRICE $1.50.

On receipt of the price, the work will be sent, postpaid, from this office.

CLOTH CASES FOR BINDING THE REPORTER, can be had at this office. Price 25 cts. each, by mail. Each case is neatly lettered, and fits one volume. tf.

STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. *Self Sustaining.*—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. *Cup D.*—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see *Catalogue.* The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.

$1.50 $1.50

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

1165-1190

Jefferson

MEDICAL COLLEGE

PHILADELPHIA.

The Fifty-fifth Session of the Jefferson Medical College will begin on Wednesday, October 1st, 1879, and will continue until the 1st of March, 1880. Preliminary Lectures will be held from Monday, 8th of September.

PROFESSORS.

JOSEPH PANCOAST, M.D.,
General, Descriptive and Surgical Anatomy (Emeritus).

S. D. GROSS, M.D., L.L.D., D.C.L., Oxon.,
Institutes and Practice of Surgery.

ELLERSLIE WALLACE, M.D.,
Obstetrics and Diseases of Women and Children.

J. M. DA COSTA, M.D.,
Practice of Medicine.

J. AITKIN MEIGS, M.D.,
Institutes of Medicine and Medical Jurisprudence.

WM. H. PANCOAST, M.D.,
General, Descriptive and Surgical Anatomy.

ROBERT E. ROGERS, M.D.,
Medical Chemistry and Toxicology.

ROBERTS BARTHOLOW, M.D.,
Materia Medica and General Therapeutics.

Clinical Instruction is given *daily* at the **Hospital of the Jefferson Medical College** throughout the year, by Members of the Faculty, and by the Hospital Staff, which is constituted as follows:

SURGEONS.
JOHN H. BRINTON, M.D.,
S. W. GROSS, M.D.,
R. J. LEVIS, M.D.

OPHTHALMIC SURGEON.
WILLIAM THOMPSON, M.D.

AURAL SURGEON.
L. TURNBULL, M.D.

PHYSICIANS.
J. SOLIS-COHEN, M.D.,
JAMES C. WILSON, M.D.,
OLIVER P. REX, M.D.,
W. W. VANVALZAH, M.D.

GYNÆCOLOGISTS.
F. H. GETCHELL, M.D.,
J. EWING MEARS, M.D.

PATHOLOGIST.
MORRIS LONGSTRETH, M.D.

A Summer Course of Lectures is given, beginning in the third week in March, 1880, and extending through the months of April, May, and to the middle of June. There is no additional charge for this Course to matriculates of the College, except a registration fee of five dollars; non-matriculates pay thirty-five dollars, which is, however, credited on the amount of fees paid for the ensuing Winter Course.

FEES.

MATRICULATION FEE (paid once), . .	$ 5.00	PRACTICAL ANATOMY, ...	$10.00
TICKET OF EACH PROFESSOR (7) $20, .	140.00	GRADUATION FEE, ...	30.00

The Annual Announcement, giving full particulars, will be sent on application to

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. Danforth, M.D., Pathology; John E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine; Daniel R. Brower, M.D., Secretary, Nervous and Mental Diseases; Sarah Hackett Stevenson, M.D., Corresponding Secretary, Physiology; David W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry; Wm. J. Maynard, A.M., M.D., Therapeutics and Dermatology; Wm. T. Montgomery, M.D., Eye and Ear; E. Fletcher Ingals, M.D., Diseases of Chest and Throat; John O. Hobbs, M.D., Demonstrator.

For information or announcement, address either of the Secretaries, at 125 State Street.

1141-1192 W. H. BYFORD, A.M., M.D., *President.*

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

Lecture Tickets, including matriculation, $45.

College, cor. of State and Sixth Sts.; Dean's Office, 181 E. State St.

Letters of inquiry should be addressed to the Dean.

Prof. FRANCIS CARTER, M.D., Dean, Columbus, Ohio.
1150-1201

Columbus Medical College.

Preliminary Course begins September 1st.
Regular Course October 1st, 1878, and closes the last week in February, 1879.

Tickets	*$30.00*
Matriculation	*5.00*
Graduation	*25.00*
Demonstrator	*5.00*

For further information address

1134-1185 D. N. KINSMAN, Dean.

BETHESDA WATER.

The following will show the wonderful effects of Bethesda in Dropsy (probably Bright's Disease), in its last stages. The patient had been given up to die by two physicians. It also shows that Bethesda will relieve obstinate cases of constipation.

SAUK CITY, WIS., April 20, 1878.

DEAR SIR:—Your letter of March 20th was received. I called to see Mr. Lenz immediately after receiving it, but did not find him at home, and so had not an opportunity of seeing him for some time, although he lives but a few steps from my house. Was called to see Mr. Lenz last January, 23d. Found him in a darkened room, in bed, complaining of almost constant headache, so severe that he could not bear the light; had general dropsy (anasarca); examined his urine and found it loaded with albumen; indeed, I never saw a specimen of urine so full of albumen. I prescribed for him, with no benefit; called occasionally to see him and found him constantly failing; gave up prescribing for him (except some laxative pills to keep his bowels open, which were obstinately constipated), as I considered his case a hopeless one; and the physician who attended him before pronounced his case one of the worst cases of Bright's Disease he had ever seen. When I received your circular (not, however, having any hope that Bethesda could benefit so bad a case), I called his attention to it, through a friend of his. He at once asked me to order him some, as he had lost all confidence in medicines, and had given up in despair of relief. He says that in the first twenty-four hours after commencing to drink the water he felt a change; for the first few days dropsical swelling seemed to increase, and then gradually diminished until it entirely disappeared, until now he is free from it; pain, also, in the region of the kidneys (which I forgot to mention), is now all gone. His appetite has improved until it is now regular and quite good. He has improved gradually and steadily ever since he has been using Bethesda. He is now able to walk all over town and attend to business, and looks quite well; in fact, seems to be nearly well.

☞ Soon after commencing to drink the water his bowels became regular; he supposed, however, it was not the effect of the water, but being without it for four or five days he had to resort to pills again, until he again commenced drinking the water, when the bowels again became regular. Mr. Lenz is the proprietor of a brewery, and is well known throughout the community, and I presume has a large number of acquaintances in Milwaukee. He has always been temperate in his habits. He says Bethesda has done wonders for him. Please examine this hasty and disconnected scrawl.

Yours respectfully,
J. HOTRING, M.D.

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

Office, 87 Clark St., Chicago.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,
192 and 194 Jackson St., Chicago, Ill.

HORSFORD'S
Acid Phosphate,

(LIQUID.)

For Dyspepsia, Mental and Physical Exhaustion, Nervousness, Diminished Vitality, Urinary Difficulties, etc.

Prepared according to the directions of E. N. Horsford, late Professor in Harvard University.

The value of this preparation of Acid Phosphate was long ago theoretically demonstrated, and has since been firmly established by experience obtained from its continued use in a great variety of cases, in every part of the country. It affords nourishment to the cerebral and nervous systems, and restores to their normal action deranged secretory organs, and gives vigor and renewed strength to the human system when weakened by overwork.

There seems to be no difference of opinion in high medical authority, of the value of phosphoric acid, and no preparation has ever been offered to the public which seems to so happily meet the general want as this.

It is not nauseous, but agreeable to the taste.
No danger can attend its use.
Its action will harmonize with such stimulants as are necessary to take.
It makes a delicious drink with water and sugar only.

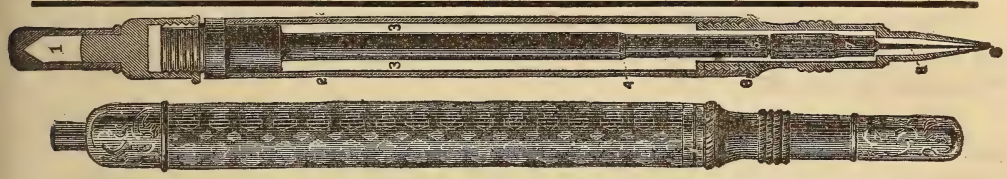
Prices reasonable. Pamphlet giving further particulars mailed free on application to manufacturers.

Physicians desiring to test it will be furnished a bottle free of expense, except express charges.

MANUFACTURED BY THE

RUMFORD CHEMICAL WORKS,

1155-1206 PROVIDENCE, R. I.



THE MACKINNON PEN.

Will write 75 pages foolscap without refilling; abolishes steel or gold pens, pen holders, pencils and inkstands. Writes on any paper, with any clean ink. "The point of the pen is actually a ring of iridium," says the report of the Franklin Institute. Can be carried in the pocket or used at the desk. "Warranted to show no signs of wear in three years." No professional man should be without it. Examine it, at

HINTS IN THE OBSTETRIC PROCEDURE.

BY WILLIAM B. ATKINSON, A.M., M.D.,

Lecturer on Diseases of Children, at the Jefferson Medical College. Physician to the Department of Obstetrics and Diseases of Children, Howard Hospital, Philadelphia.

SECOND EDITION. ENTIRELY RE-WRITTEN AND ENLARGED.

12mo, CLOTH. PRICE, $1.00.

NOTICES OF THE SECOND EDITION.

"The charmingly informal style of the author renders the reading of the monograph a positive pleasure. Conscientiously we feel that we are working in the interests of both physician and patient when we say to all who do not own it now, order at once a copy of these *Hints* for your own use."—*The Detroit Lancet*, July, 1879.

"The author, a teacher of experience, treats his subject in a way to make it especially useful to the student, but not to the student alone."—*The Richmond and Louisville Medical Journal*, June, 1879.

"Dr. Atkinson fully appreciates the vast importance of the obstetric art in both its immediate and remote effects on mothers and children, as well as the reputation of the physician, and, in this interesting little work, gives valuable hints, which are intended to guide us in the management of women before, during, and after the termination of labor."—*Canada Journal of Medical Science*, July, 1879.

"The many valuable points cited, the practical manner in which they are stated, together with the sound views of practice enunciated, make this little monograph truly valuable."—*The Southern Practitioner*, January, 1879.

"It is the gist of the obstetric art in convenient form, and will serve to refresh the practitioner's mind in any case pertaining thereto."—*Maryland Medical Journal*, June, 1879.

"The young man without obstetric experience . . . and likewise certain practitioners who have had no inconsiderable experience and been years in gaining it, but who have not kept abreast with advancing thought and polemic literature in obstetric channels, will find themselves refreshed and enlightened by a persual of Dr. Atkinson's Hints."—*The American Practitioner*, August, 1879.

"We take pleasure, however, in commending the book to the profession, with the belief that the useful knowledge it contains will more than compensate any one for reading it."—*The Medical Herald*, July, 1879.

"This little book is just of the size to put in one's pocket when he goes out to attend a confinement case, and it is just of the kind that he will find to be useful and agreeable reading while waiting for the *denouément*. It will refresh his mind and prepare him to meet accidents which may occur."—*Michigan Medical News*, July, 1879.

PUBLISHED AND FOR SALE BY

D. G. BRINTON,

No. 115 South Seventh Street, Philadelphia.

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained.

T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable.

J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily.

J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS' Oval Shape. Complete Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

FOOD IS THE BEST TONIC!!

MENSMAN'S

PEPTONIZED

BEEF TONIC.

The great necessity for a fluid food that would possess *all the elements necessary for the support of the system*, having been long felt by the medical profession, we call attention to this preparation, containing the entire nutritious properties of the muscular fibre, blood, bone, and brain of a healthy bullock, dissolved and semi-digested by aid of heat and pepsin, and preserved by spirit; thus constituting a most perfect nutritive, reconstructive tonic.

It is not a mere stimulant, like the now fashionable extracts of beef, but contains blood-making, force-generating, and life-sustaining properties, pre-eminently calculated to support the system under the exhausting and wasting process of fevers and other acute diseases, and to rebuild and recruit the tissues and forces, whether lost in the destructive march of such affections, or induced by overwork, general debility, or the more tedious forms of chronic disease.

It is friendly and helpful to the most delicate stomach, and where there is a fair remnant to build on, will reconstruct the most shattered and enfeebled constitution. It is entirely free from any drugs.

It is prepared after a thoroughly tested and scientific method.

PROPRIETORS,

CASWELL, HAZARD & CO.,

Druggists and Chemists,

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue**, and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer,	10 large Ivory Points, well charged on both sides	$1.50
	5 large Ivory Points, " " "	.80
	Large Ivory Points, less than 5, " " " each	.25
	1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants,	10 small Ivory Points	1.50
	1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

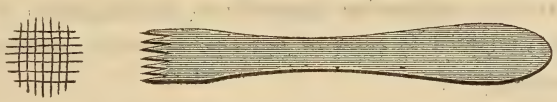
On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents;	per 1000 2.00
Large	per 100, 50 cents;	per 1000 4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.



SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

New Illustrated Catalogue of Surgical Instruments sent, post-paid, on request.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

L. REICH,

DIRECT IMPORTER OF THE CHOICEST AND PUREST

Hungarian WINES

EVER BROUGHT TO THIS COUNTRY,

STRICTLY FOR MEDICINAL USE.

13 West 11th St., New York.

Mr. REICH will be pleased to see those of the Medical Profession who may desire to avail themselves of the opportunity of procuring **STRICTLY FIRST-CLASS WINES**, which have received the endorsement of the most eminent Medical men of the country, as is evidenced from the following letters of commendation which have been received:—

This is to certify, that I have examined Mr. L. REICH'S TOKAYER AUSBRUCH, TOKAYER MASLAS and BUDAI IMP. I take great pleasure in commending these Wines to the Medical Profession because of their purity.

R. OGDEN DOREMUS, M.D., LL.D.,
Prof. of Chem. and Toxicology in Bellevue Hosp. Med. Col., and Prof. of Chem. and Physics in Col. City of New York.

We have used in our practice the Hungarian Wines sold by Mr. LORENZ REICH, who puts them on the market unadulterated, just as they are imported. To this fact we attribute their great value as a medicine in diseases where such tonics are indicated, especially in those which are attended by defective digestion and imperfect assimilation. We cordially recommend Mr. REICH and his Wines to our professional brethren.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.	

JOHN A. MURPHY, M.D., Dean, 163 *West Seventh Street.*
WM. H. TAYLOR, M.D., Secretary, *329 West Seventh Street.*

1160–1185

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page* 58 *of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice :— **Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College), **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

A MANUAL OF

EXAMINATION OF THE EYES.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

BY DR. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America. We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day. This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and relations of the optic nerve and its sheaths. I believe that it is unique; at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime importance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,

DETROIT MEDICAL COLLEGE.

(MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.)

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. **To be had of all respectable Chemists throughout the world.**

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. Prize Medal. | 1868. Silver Medal. | 1872. Gold Medal. | 1873, VIENNA. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of **so-called French Pepsines** bearing fictitious names, and prescribe **Boudault's only.**

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. BETHESDA WATER.

The following will show the wonderful effects of Bethesda in Dropsy (probably Bright's Disease), in its last stages. The patient had been given up to die by two physicians. It also shows that Bethesda will relieve obstinate cases of constipation.

SAUK CITY, WIS., April 20, 1878.

DEAR SIR:—Your letter of March 20th was received. I called to see Mr. Lenz immediately after receiving it, but did not find him at home, and so had not an opportunity of seeing him for some time, although he lives but a few steps from my house. Was called to see Mr. Lenz last January, 23d. Found him in a darkened room, in bed, complaining of almost constant headache, so severe that he could not bear the light; had general dropsy (anasarca); examined his urine and found it loaded with albumen; indeed, I never saw a specimen of urine so full of albumen. I prescribed for him, with no benefit; called occasionally to see him and found him constantly failing; gave up prescribing for him (except some laxative pills to keep his bowels open, which were obstinately constipated), as I considered his case a hopeless one; and the physician who attended him before pronounced his case one of the worst cases of Bright's Disease he had ever seen. When I received your circular (not, however, having any hope that Bethesda could benefit so bad a case), I called his attention to it, through a friend of his. He at once asked me to order him some, as he had lost all confidence in medicines, and had given up in despair of relief. He says that in the first twenty-four hours after commencing to drink the water he felt a change; for the first few days dropsical swelling seemed to increase, and then gradually diminished until it entirely disappeared, until now he is free from it; pain, also, in the region of the kidneys (which I forgot to mention), is now all gone. His appetite has improved until it is now regular and quite good. He has improved gradually and steadily ever since he has been using Bethesda. He is now able to walk all over town and attend to business, and looks quite well; in fact, seems to be nearly well.

☞ Soon after commencing to drink the water his bowels became regular; he supposed, however, it was not the effect of the water, but being without it for four or five days he had to resort to pills again, until he again commenced drinking the water, when the bowels again became regular. Mr. Lenz is the proprietor of a brewery, and is well known throughout the community, and I presume has a large number of acquaintances in Milwaukee. He has always been temperate in his habits. He says Bethesda has done wonders for him. Please examine this hasty and disconnected scrawl.

Yours respectfully,

J. HOTRING, M.D.

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

1172-1197 **Office, 87 Clark St., Chicago.**

UNIVERSITY of MICHIGAN.

DEPARTMENT OF MEDICINE AND SURGERY.

The 30th annual course of lectures will commence on October 1st, 1879, and continue *nine months*.

Course separate, but equal, for women.

Matriculation Fee, *paid but once*—Residents of Michigan, $10; non-residents, $25. Annual Dues—Residents of Michigan, $20; non-residents, $25. Graduation Fee—for all alike, $10.

FACULTY.

James B. Angell, LL. D., President, Alonzo B. Palmer, M.D., Professor of Pathology and the Practice of Medicine, Corydon L. Ford, M.D., Prof. of Anatomy and Physiology. Albert B. Prescott, M.D., Professor of Organic and applied Chemistry and Pharmacy. George E. Frothingham, M.D., Professor of Materia Medica, Ophthalmology and Otology. Donald Maclean, M.D., Professor of Surgery. Edward S. Dunster, M.D., Professor of Obstetrics and Diseases of Women and Children. John W. Langley, M.D., Professor of General Chemistry and Physics. Will. J. Herdman, M.D., Demonstrator of Anatomy. Charles H. Stowell, M.D., Instructor in Physiological Laboratory. Victor C. Vaughan, PH.D., Instructor in Medical Chemistry.

WALNUT HILL,

HARTFORD, CONN.

CHARTERED IN 1874.

An Asylum Home for the treatment of *Inebriates* and *Opium Cases.*

Admirably situated, with ample legal powers of control; based on the fact, confirmed by science and experience, that *Inebriety* is both a physical and mental disease, curable as other diseases are, requiring special treatment in asylums, and in all cases relieved and benefited.

A limited number of patients received, and special facilities provided for each case. The objects sought are rest and building up the diseased organism. Among the means employed are, Turkish baths, electricity, tonics, lectures, amusements, and mental diversion, with exact military and hygienic surroundings. For further information address

T. D. CROTHERS, M. D., Superintendent,

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.60 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., *NEW YORK.*

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....**25 cts.**
CAPILLARY TUBES.....**$2 00**

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

HUNYADI JANOS MINERAL WATER.

THE BEST AND CHEAPEST

NATURAL APERIENT.

THE BRITISH MEDICAL JOURNAL.

"HUNYADI JANOS.—The most agreeable, safest and most efficacious aperient water which has been brought under our notice."

LONDON MEDICAL RECORD.

"*Hunyadi Janos.*—The most pleasant and, owing to the smallness of its dose, the CHEAPEST of all the natural Aperient Waters."

THE LANCET.

"HUNYADI JANOS.—Baron Liebig affirms that its richness in aperient salts surpasses that of all other known waters."

From Prof. MACNAMARA, Prof. of Materia Medica, Royal College of Surgeons in Ireland.

"Far the most valuable and palatable of our Aperient Mineral Waters. I have been agreeably surprised with the result of a clinical investigation."

Specially approved by the Academy of Medicine of Paris, and its Sale in France authorized by decree of the French Government.

Medals awarded: Lyons, 1872. Vienna, 1873. Paris, 1878.

USES OF HUNYADI JANOS	ACCORDING TO OPINIONS OF EMINENT AUTHORITIES.
1. For habitual constipation.	"None so prompt, mild, and can be so well borne for a length of time."—Prof. SPIEGELBERG, *University of Breslau.*
2. By persons inclined to obesity, congestive and gouty disorders.	"I have used the Hunyadi Janos water in many cases of the rheumatic and gouty diathesis with very marked benefit. In cases accompanied with great obesity I prefer it to any other laxative."—Prof. LEWIS A. SAYRE, M.D., *Bellevue Hospital, New York.* "Preferred to Friedrichshall and Pullna by those who have tried them."—Prof. AITKEN, F.R.S., *Netley.* "Of great use in catarrhal conditions of the pile-ducts and bowels, and for CONGESTION of the LIVER and OTHER ORGANS."—*Medical Times and Gazette.*
3. In chronic affections of the organs of respiration and Circulation.	"Produces remarkable relief in chronic diseases symptomatic of affections of the abdominal and thoracic organs, and in serous effusions with impediment of respiration and circulation."—Prof. ALOIS MARTIN, *Royal Medical Councillor, University of Munich.*
4. Against hæmorrhoids, and portal and hepatic congestion.	"The most certain and the most comfortable in its action of all the aperient waters. The special indications for its use are, in costiveness (especially in that of pregnancy), in portal congestion with tendency to hæmorrhoids, and in sluggish action of the liver."—Inspector-General MACPHERSON, M.D., *Author of "Baths and Wells of Europe."*
5. During pregnancy; for nursery use; and in many female disorders.	"I prescribe none but this."—Baron v. SCANZONI, *Wurzburg.* "I prefer this to any and every other."—Dr. MARION SIMS, *New York, Honorary Fellow Obstetrical Society of London and Dublin.*
6. In bilious attacks and sick headaches.	"I have made use of the Hunyadi Janos mineral water ever since its introduction into this country, and with ever increasing satisfaction. It is highly beneficial to persons of sedentary habit, and in what are called bilious attacks."—Dr. SILVER, *Lecturer on Clinical Medicine, Charing-Cross Hospital.*
7. Against evil consequences of indiscretion in Diet.	"Has invariably good and prompt success: a most valuable item in the balneological treasury."—Prof. VIRCHOW, *Berlin.*

For ordinary aperient purposes a half wineglassful of the Hunyadi Water may be taken at bed-time, or a wineglassful taken in the morning fasting. It is most efficacious when warmed to a temperature not below 60 deg., or when an equal quantity of hot water is added to it.

HUNYADI JANOS MINERAL WATER.
INDISPENSABLE TO THE TRAVELLING PUBLIC.

To secure the genuine Water, require bottles with a blue label bearing the name

PRESCRIBERS AND DISPENSERS

— OF —

PEPSIN

Believing that the confidence of the profession in the practical value of *Pepsin*, as a remedy in various gastric derangements, has been impaired by the use of preparations which do not possess the required digestive power, we have made special efforts to manufacture an article which should command approval by demonstrating its effectiveness in all cases where its employment is indicated.

The SACCHARATED PEPSIN which we now offer is, we believe, equal, if not superior, to any in the market, foreign or domestic, and of such digestive power that the desired response to its employment may always be depended upon.

We present, with great pleasure, the accompanying flattering testimonial by Dr. EDWARD L. DUER, of this city.

We respectfully solicit a trial of our *Saccharated Pepsin* in your practice.

MAILED UPON RECEIPT OF PRICE, 40 CTS. PER OUNCE.

MESSRS. HANCE BROTHERS & WHITE:

GENTLEMEN,—Having been much interested of late in the practical value of *Pepsin*, I have had performed a series of experiments with all the various specimens in general use in this city,—so far as I could ascertain,—with the view of *determining their relative merits.*

Your own has proven itself *so far superior* to others, that I have thought it due you to state that I found five grains of your Pepsin, in acidulated water, equal to the solution of one hundred and forty-five grains of the white part of hard-boiled egg,—against one hundred and fourteen grains, as the next best result obtained from precisely the same treatment, of all the other Pepsins,—*some of them dissolving even less than sixty grains.* Respectfully yours,

EDWARD L. DUER, M.D.,

PHILADELPHIA, December 7, 1876. 1704 Arch Street.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

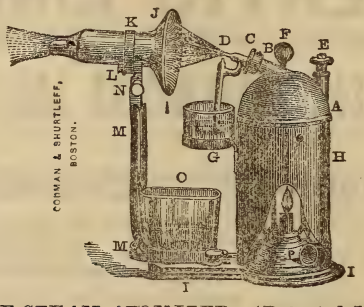
CODMAN & SHURTLEFF'S

ATOMIZING APPARATUS.

PRICES REDUCED.



THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.

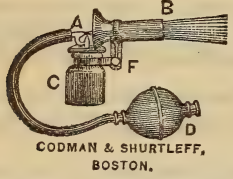
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.

It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.

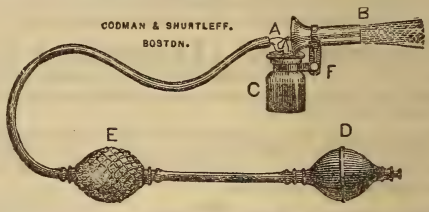
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.

Brass parts, nickel-plated, additional, $2.00.

Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.



THE BOSTON ATOMIZER. (Patented.)



SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.

The Bulbs are adapted to all the Atomizing Tubes made by us.

Each of the above Apparatus is supplied with two carefully-made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*
Atomizer by Compressed Air, with Regulating Self-acting Cut-off		*45.00*
Dr. Oliver's Atomizer		*4.00*

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

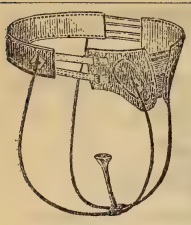
LACTOPEPTINE (in oz. bottles).....per oz.	$1.00
" (" ").....per doz.	10.00
" (in ½ lb ").....per lb.	12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

THE NEW YORK PHARMACAL ASSOCIATION,

NOS. 10 and 12 COLLEGE PLACE, NEW YORK.

P. O. BOX 1574.



DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 JACKSON STREET, CHICAGO, ILL.

Our valuable pamphlet "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

MIAMI MEDICAL COLLEGE OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

The Preliminary Term of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

The Regular Winter Session will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.	

JOHN A. MURPHY, M.D., Dean, 163 West Seventh Street.
WM. H. TAYLOR, M.D., Secretary, 329 West Seventh Street.

1160-1185

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page 58 of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice :— **Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

1166-1217

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., " "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna.

"R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

SEABURY & JOHNSON,

Manufacturers of Medicinal and Surgical Plasters, in Rubber Combination,

21 PLATT STREET, NEW YORK.

ALWAYS SPECIFY SEABURY & JOHNSON'S PLASTERS.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With Hops (Plain)*,	- - - - - - -		$1.00

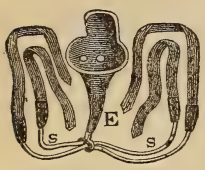
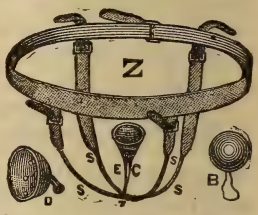
STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. *Self Sustaining.*—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. *Cup D.*—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see *Catalogue.* The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.



$1.50 $1.50

All the Instruments and Catalogue obtained through this Office.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,
192 and 194 Jackson St., Chicago, Ill.

DETROIT MEDICAL COLLEGE.

(MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.)

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle. M.D., Treasurer, Diseases of Children; Isaac N. Danforth, M.D., Pathology; John E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine, Daniel R. Brower, M.D., Secretary, Nervous and Mental Diseases; Sarah Hackett Stevenson, M.D., Corresponding Secretary, Physiology; David W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry; Wm. J. Maynard, A.M., M.D., Therapeutics and Dermatalogy; Wm. T. Montgomery, M.D., Eye and Ear; E. Fletcher Ingals, M.D., Diseases of Chest and Throat; John O. Hobbs, M.D., Demonstrator.

For information or announcement, address either of the Secretaries, at 125 State Street.

1141-1192 W. H. BYFORD, A.M., M.D., *President.*

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

Lecture Tickets, including matriculation, $45.

College, cor. of State and Sixth Sts.; Dean's Office, 181 E. State St.

Letters of inquiry should be addressed to the Dean.

Prof. FRANCIS CARTER, M.D., Dean, Columbus, Ohio.

BETHESDA WATER.

The following will show the wonderful effects of Bethesda in Dropsy (probably Bright's Disease), in its last stages. The patient had been given up to die by two physicians. It also shows that Bethesda will relieve obstinate cases of constipation.

SAUK CITY, WIS., April 20, 1878.

DEAR SIR:—Your letter of March 20th was received. I called to see Mr. Lenz immediately after receiving it, but did not find him at home, and so had not an opportunity of seeing him for some time, although he lives but a few steps from my house. Was called to see Mr. Lenz last January, 23d. Found him in a darkened room, in bed, complaining of almost constant headache, so severe that he could not bear the light; had general dropsy (anasarca); examined his urine and found it loaded with albumen; indeed, I never saw a specimen of urine so full of albumen. I prescribed for him, with no benefit; called occasionally to see him and found him constantly failing; gave up prescribing for him (except some laxative pills to keep his bowels open, which were obstinately constipated), as I considered his case a hopeless one; and the physician who attended him before pronounced his case one of the worst cases of Bright's Disease he had ever seen. When I received your circular (not, however, having any hope that Bethesda could benefit so bad a case), I called his attention to it, through a friend of his. He at once asked me to order him some, as he had lost all confidence in medicines, and had given up in despair of relief. He says that in the first twenty-four hours after commencing to drink the water he felt a change; for the first few days dropsical swelling seemed to increase, and then gradually diminished until it entirely disappeared, until now he is free from it; pain, also, in the region of the kidneys (which I forgot to mention), is now all gone. His appetite has improved until it is now regular and quite good. He has improved gradually and steadily ever since he has been using Bethesda. He is now able to walk all over town and attend to business, and looks quite well; in fact, seems to be nearly well.

☞ Soon after commencing to drink the water his bowels became regular; he supposed, however, it was not the effect of the water, but being without it for four or five days he had to resort to pills again, until he again commenced drinking the water, when the bowels again became regular. Mr. Lenz is the proprietor of a brewery, and is well known throughout the community, and I presume has a large number of acquaintances in Milwaukee. He has always been temperate in his habits. He says Bethesda has done wonders for him. Please examine this hasty and disconnected scrawl.

Yours respectfully,

J. HOTRING, M.D.

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician, Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

1172-1197 **Office, 87 Clark St., Chicago.**

PRACTICE FOR SALE.—A PHYSICIAN who leaves for Europe, wishes to sell his large office practice. This is a good opportunity for one who understands the German language, wanting a quiet cash paying office practice. Price $400 cash. Address "Dr. C.," 213 Wood St., Philadelphia, Pa.

WANTED.—TO FORM A PARTNERSHIP with an elderly physician, in Philadelphia preferred. Family—myself and son of 10 summers. Graduated at the Jefferson Medical College in 1868. Eleven years' practice in city of 45,000 inhabitants. Am doing a business at this time of $6000 a year; keep *two* horses and *two* carriages—one paneled and closed; the other a doctor's phæton. *Money* no *object*. COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

HINTS IN THE OBSTETRIC PROCEDURE.

BY WILLIAM B. ATKINSON, A.M., M.D.,

Lecturer on Diseases of Children, at the Jefferson Medical College. Physician to the Department of Obstetrics and Diseases of Children, Howard Hospital, Philadelphia.

SECOND EDITION. ENTIRELY RE-WRITTEN AND ENLARGED.

12mo, CLOTH. PRICE, $1.00.

NOTICES OF THE SECOND EDITION.

"The charmingly informal style of the author renders the reading of the monograph a positive pleasure. Conscientiously we feel that we are working in the interests of both physician and patient when we say to all who do not own it now, order at once a copy of these *Hints* for your own use."—*The Detroit Lancet*, July, 1879.

"The author, a teacher of experience, treats his subject in a way to make it especially useful to the student, but not to the student alone."—*The Richmond and Louisville Medical Journal*, June, 1879.

"Dr. Atkinson fully appreciates the vast importance of the obstetric art in both its immediate and remote effects on mothers and children, as well as the reputation of the physician, and, in this interesting little work, gives valuable hints, which are intended to guide us in the management of women before, during, and after the termination of labor."—*Canada Journal of Medical Science*, July, 1879.

"The many valuable points cited, the practical manner in which they are stated, together with the sound views of practice enunciated, make this little monograph truly valuable."—*The Southern Practitioner*, January, 1879.

"It is the gist of the obstetric art in convenient form, and will serve to refresh the practitioner's mind in any case pertaining thereto."—*Maryland Medical Journal*, June, 1879.

"The young man without obstetric experience . . . and likewise certain practitioners who have had no inconsiderable experience and been years in gaining it, but who have not kept abreast with advancing thought and polemic literature in obstetric channels, will find themselves refreshed and enlightened by a persual of Dr. Atkinson's Hints."—*The American Practitioner*, August, 1879.

"We take pleasure, however, in commending the book to the profession, with the belief that the useful knowledge it contains will more than compensate any one for reading it."—*The Medical Herald*, July, 1879.

"This little book is just of the size to put in one's pocket when he goes out to attend a confinement case, and it is just of the kind that he will find to be useful and agreeable reading while waiting for the *denouément*. It will refresh his mind and prepare him to meet accidents which may occur."—*Michigan Medical News*, July, 1879.

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained.

T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable.

J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily.

J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS' Oval Shape Compressed Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and it's Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Lablé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.
PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,
The Albuminoid Ferruginous Principle of Blood.

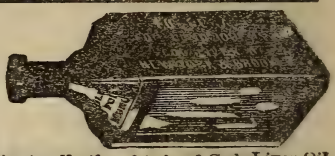
HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia*, *Chlorosis*, *Cachexias*, *Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away*.

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.



Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.
(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

SOLD BY DRUGGISTS GENERALLY.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

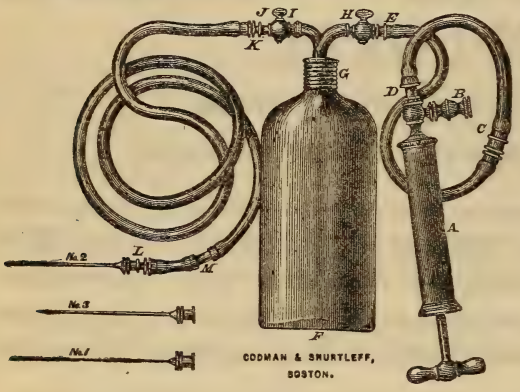

Fig. 68.

Fig. 77.

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post-paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

LEROY M. BINGHAM, M.D., Burlington, Vt., Demonstrator of Anatomy. Attending Physician to Mary Fletcher Hospital.
CLINTON WAGNER, M.D., New York City, Professor of Diseases of the Throat.

HOSPITAL ADVANTAGE.—The Mary Fletcher Hospital, with its commodious amphitheatre, is open for clinical instruction during this session. The Medical and Surgical Clinics of the College will be held in the amphitheatre attached to the Hospital. In addition to these regular clinics of the College, instructions will be given at the bedside by the Professors of the Medical Department of the University.

LECTURES ON SPECIAL SUBJECTS.—These lectures, by gentlemen well-known as authorities recognized in their particular departments, will be delivered during the regular session.

CLINIQUES.—Besides these lectures, there will be Cliniques held as follows:—

SURGICAL CLINIQUE, by Professor Little, every Saturday, from 9 to 12, during the last half of the session.
MEDICAL CLINIQUE, by Professor Carpenter, on Wednesday morning, during first half of the term.
CLINIQUE FOR DISEASES OF NERVOUS SYSTEM, by Professor Hammond, during his course.
CLINIQUE FOR DISEASES OF EYE AND EAR, by Professor Roosa, during his course of lectures.
CLINIQUES FOR DISEASES OF SKIN, by Professor Taylor, during his course.
CLINIQUE FOR DISEASES OF CHILDREN, by Professor Roberts.
CLINIQUE FOR THORACIC DISEASES, by Professor Geo. M. Garland M.D.
CLINIQUE FOR DISEASES OF THROAT, by Professor Clinton Wagner.

THE PRELIMINARY TERM, consisting of a course of Lectures and Recitations in the various branches of Medicine and Surgery, will begin on the first Thursday of Nov., 1879, and continue until March 1st, 1880. FEE, $30.

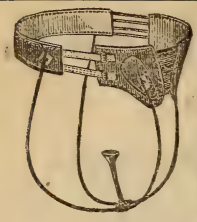
THE REGULAR WINTER SESSION will commence on the first Thursday of March, 1880, and continue sixteen weeks. This course will consist of from five to six lectures daily, in the various departments of Medicine and Surgery.

FEES FOR THE REGULAR SESSION.

MATRICULATION FEE, PAYABLE EACH TERM.....$ 5 00
FEES FOR THE FULL COURSE OF LECTURES by all the Professors.. 70 00
GRADUATION FEE..... 25 00

Material for dissection will be furnished at cost. The tickets are to be taken out at the beginning of the session.
Students who have already attended two full courses of lectures in other regular schools, are admitted on paying the matriculation fee and $25. Students who have attended two full courses in this College, or who, have attended one full course in some regularly established medical school, and one full course in this College, are admitted to a third course of lectures on paying the matriculation fee only. GRADUATES of this school are admitted without fee. GRADUATES of other regular schools and *Theological Students* are admitted on general ticket, by paying the matriculation fee. Good board can be obtained at reasonable rates.
For further particulars and Circular, apply to the Secretary,

1181-mtf **Prof. A. P. GRINNELL, M.D., Burlington, Vt.**



DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

MIAMI MEDICAL COLLEGE OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

WM. H. TAYLOR, M.D., Secretary, *329 West Seventh Street.*

1160–1185

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page 58 of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice:—**Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

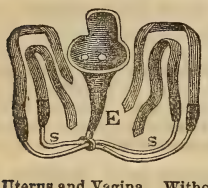
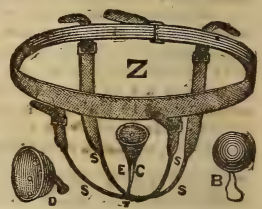
STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



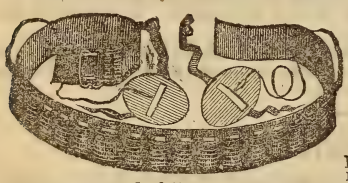
Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. ***Self Sustaining.***—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. ***Cup D.***—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see ***Catalogue.*** The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.



$1.50 $1.50

All the Instruments and Catalogue obtained through this Office.

(***Med. and Surgical Reporter.***)



DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

1165-1190

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. Prize Medal.

1868. Silver Medal.

1872. Gold Medal.

1873, VIENNA. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

BEWARE OF IMITATIONS.

E. FOUCERA & CO., Agents,

NEW YORK.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

Lecture Tickets, including matriculation, $45.

College, cor. of State and Sixth Sts.; Dean's Office, 181 E. State St.

Letters of inquiry should be addressed to the Dean.

Prof. FRANCIS CARTER, M.D., Dean, Columbus, Ohio. 1150-1201

Columbus Medical College.

Preliminary Course begins September 1st.

Regular Course October 1st, 1878, and closes the last week in February, 1879.

Tickets	*$30.00*
Matriculation	*5.00*
Graduation	*25.00*
Demonstrator	*5.00*

BETHESDA WATER.

The following will show the wonderful effects of Bethesda in Dropsy (probably Bright's Disease), in its last stages. The patient had been given up to die by two physicians. It also shows that Bethesda will relieve obstinate cases of constipation.

SAUK CITY, WIS., April 20, 1878.

DEAR SIR:—Your letter of March 20th was received. I called to see Mr. Lenz immediately after receiving it, but did not find him at home, and so had not an opportunity of seeing him for some time, although he lives but a few steps from my house. Was called to see Mr. Lenz last January, 23d. Found him in a darkened room, in bed, complaining of almost constant headache, so severe that he could not bear the light; had general dropsy (anasarca); examined his urine and found it loaded with albumen; indeed, I never saw a specimen of urine so full of albumen. I prescribed for him, with no benefit; called occasionally to see him and found him constantly failing; gave up prescribing for him (except some laxative pills to keep his bowels open, which were obstinately constipated), as I considered his case a hopeless one; and the physician who attended him before pronounced his case one of the worst cases of Bright's Disease he had ever seen. When I received your circular (not, however, having any hope that Bethesda could benefit so bad a case), I called his attention to it, through a friend of his. He at once asked me to order him some, as he had lost all confidence in medicines, and had given up in despair of relief. He says that in the first twenty-four hours after commencing to drink the water he felt a change; for the first few days dropsical swelling seemed to increase, and then gradually diminished until it entirely disappeared, until now he is free from it; pain, also, in the region of the kidneys (which I forgot to mention), is now all gone. His appetite has improved until it is now regular and quite good. He has improved gradually and steadily ever since he has been using Bethesda. He is now able to walk all over town and attend to business, and looks quite well; in fact, seems to be nearly well.

☞ Soon after commencing to drink the water his bowels became regular; he supposed, however, it was not the effect of the water, but being without it for four or five days he had to resort to pills again, until he again commenced drinking the water, when the bowels again became regular. Mr. Lenz is the proprietor of a brewery, and is well known throughout the community, and I presume has a large number of acquaintances in Milwaukee. He has always been temperate in his habits. He says Bethesda has done wonders for him. Please examine this hasty and disconnected scrawl.

Yours respectfully,

J. HOTRING, M.D.

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician, Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

1172-1197 **Office, 87 Clark St., Chicago.**

PROPERTY AND PRACTICE FOR SALE, in a pleasant village, an hour's ride from Philadelphia. No competition; business long established and profitable. An unusual opportunity. Property twenty acres, excellent buildings. Terms easy. Every facility offered to purchaser. For particulars, address "Agrippa," care MEDICAL AND SURGICAL REPORTER. 1180

FOR SALE.—A FIRST-CLASS COUNTRY Practice, on the border of a rich, limestone, agricultural region, and embracing in its field several furnaces and rolling mills. Village, for residence, contiguous to railway station, and includes freight, express, telegraph and post offices, stores, etc., etc. Only three miles from Reading. No competition. For terms and further particulars, address or call on F. MATHEWS, M.D., Temple, Berks County, Pa. 1178-1182

WALNUT HILL,

HARTFORD, CONN.

CHARTERED IN 1874.

An Asylum Home for the treatment of *Inebriates* and *Opium Cases.*

Admirably situated, with ample legal powers of control; based on the fact, confirmed by science and experience, that *Inebriety* is both a physical and mental disease, curable as other diseases are, requiring special treatment in asylums, and in all cases relieved and benefited.

A limited number of patients received, and special facilities provided for each case. The objects sought are rest and building up the diseased organism. Among the means employed are, Turkish baths, electricity, tonics, lectures, amusements, and mental diversion, with exact military and hygienic surroundings. For further information address

COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

Dextro-Quinine in Intermittent Fever.

Case.	Name and Sex of Patient.	Age, etc.	Number of Paroxysms before taking.	Number of Paroxysms after.	Dose and Mode of Exhibition.	Total amount Exhibited.	Remarks, Pathological and Physiological Phenomena, etc.	Reported by
1	J. S. S.	27	14	0	10 grs. at bedtime.	30 grs.	I have found Dextro-Quinine fully equal to the Sulphate of Quinia, with almost none of the disagreeable symptoms of the latter.	F. C. Hageman, M.D., Seaford, L.I.
2	D. V. W.	14	5	0	8 grs. at bedtime.	24 grs.		
3	Emma L.	16	60 or more.	0	5 grs. every three hours, in glycerine, without intermission, only during febrile exacerbations, etc.	30 grs.	Patient was very much prostrated with typho-malarial fever; been under the care of another physician; was called in on the third week. I then prescribed 5 grs. of Dextro-Quinine every three hours, in glycerine, when, as it were by magic, all the grave symptoms abated at once, and the patient made a rapid recovery.	Alex. F. Joseph, M.D., Napoleon, Ind.
21	Mrs. S., *Double Quotidian.* Had taken large doses Cinchonidia sulphate without effect.	22 Brunette. Married. No children.	6	0	20 grs. divided into chart. No. v, one every two hours.	20 grs.	Had first paroxysm Nov. 20, 6 A.M., again at 4 P.M. Presented Cinchonidia sulphate, grs. xxx, chart. No. v. One to be taken every two hours. Nov. 21. Return of paroxysm at 6 A.M. and 4 P.M. Gave Cinchonidia sulphate, grs. xlv, chart. No. v. One to be taken every two hours. Nov. 22. Return of paroxysm at same time as on preceding days. Prescribed Dextro-Quinine, grs. xx, chart. No. v. One to be taken every two hours. No return of chill since that date, and highly pleased with my experience.	N. H. Manring, M.D., Rigdon, Ind.
15	I. de L., female. *Tertian.* Habituated to Quinia.	19 Married.	2	0	15 grs. in 3 doses of 5 grs., taken at intervals of ½ hour, commencing four hours before expected paroxysm. Taken in capsule.	15 grs.	Dilatation of pupil; tinnitus aurium severe, but not so much so as on former occasions when Sulphate of Quinia was used. Directed her to take 10 grains on the third day, but she did not do so. Twelve days have elapsed without return of chills. Is taking citrate of iron and strychnia.	
16	Jennie S., colored. *Quotidian.* Has "used Quinine and everything else," as she herself expressed it.	25 Married.	Unknown, but a very large number.	1	16 grs. in 4 doses, in capsule, with 1-16 gr. Morph. acet., to be taken at ½ hour intervals, commencing four hours before expected paroxysm.	48 grs.	On first evening after exhibition of Dextro-Quinine had a very slight ague, followed by considerable fever, which, however, soon passed off. Gave Hydrarg. Chlor. Mite, grs. x, at bedtime, which caused three or four operations of the bowels. The Dextro-Quinine was continued the next day. *Missed chill for first time in over a month.* Thought it best to continue medicine (without Morphia) another day. Has had no return up to to-day (10 days). Did not complain of tinnitus.	Frank S. James, Ph.D., M.D., Osceola, Ark.
5	Mary B.	3½	3	0	1 gr., in solution, every three hours.	16 grs.	Commenced the Dextro-Quinine just after last paroxysm; it acted excellently. It is now more than four weeks since she took the remedy; there has been no return. She is now in the enjoyment of good health.	G. H. Berry, M.D., New York City.
6	Edward Libby. *Tertian.*	24	9 or 10	0	Two 12-grain doses at half-hour intervals.	24 grs.	Had been taking Sulphate of Quinia in 5-gr. doses for some time, with little or no effect. Has had no chill since the Dextro-Quinine was administered (more than a month having elapsed), and the result is entirely satisfactory.	H. A. Weymouth, M.D., Saco, Me.
11	Mary Cavanough. *Quotidian.*	3	One a day for six months.	0	2 grs. in powder, every two to three hours.	15 grs.	Little girl had been complaining with chills and fever for over six months; had used Sulphate of Quinia, Tincture Cinchona, Cincho-Quinine, etc. *Had taken great quantities of Sulphate of Quinia, without effecting a cure. I gave in all about 15 grs. of Dextro-Quinine, and she never has had any chill since.* This one case in particular I think a remarkable one. The little girl had had chills regularly, almost every day, for over six months, had been treated by two physicians, and a cure could not be effected, as they and the family thought, under any circumstances. I was called directly after, and gave 2 grs. *Dextro-Quinine*, in powder, every two to three hours, and to my great surprise, as well as every one else's, she failed to have any more chills. I then put her on a tonic of iron, and she is now enjoying good health. I consider the Dextro-Quinine far superior to any of the preparations of Quinine, and, from what I have seen of its medicinal effects, I do not hesitate to recommend it as superior to all other remedies in Remittent and Intermittent Fevers.	J. H. Struble, M.D., Stanhope, N. J.

DEXTRO-QUININE sent by mail, at the rate of $1.60 per ounce, to Physicians who cannot be supplied by their local Druggists. Address

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*"—*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*"—PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS Oval Shape, Complete Coating

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

". . . . . The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

HUNYADI JANOS MINERAL WATER.

THE BEST AND CHEAPEST
NATURAL APERIENT.

THE BRITISH MEDICAL JOURNAL.

"HUNYADI JANOS.—The most agreeable, safest and most efficacious aperient water which has been brought under our notice."

LONDON MEDICAL RECORD.

"*Hunyadi Janos.*—The most pleasant and, owing to the smallness of its dose, the CHEAPEST of all the natural Aperient Waters."

THE LANCET.

"HUNYADI JANOS.—Baron Liebig affirms that its richness in aperient salts surpasses that of all other known waters."

From Prof. MACNAMARA, Prof. of Materia Medica, Royal College of Surgeons in Ireland.

"Far the most valuable and palatable of our Aperient Mineral Waters. I have been agreeably surprised with the result of a clinical investigation."

Specially approved by the Academy of Medicine of Paris, and its Sale in France authorized by decree of the French Government.
Medals awarded: Lyons, 1872. Vienna, 1873. Paris, 1878.

USES OF HUNYADI JANOS	ACCORDING TO OPINIONS OF EMINENT AUTHORITIES.
1. For habitual constipation.	"None so prompt, mild, and can be so well borne for a length of time."—Prof. SPIEGELBERG, *University of Breslau.*
2. By persons inclined to obesity, congestive and gouty disorders.	"I have used the Hunyadi Janos water in many cases of the rheumatic and gouty diathesis with very marked benefit. In cases accompanied with great obesity I prefer it to any other laxative."—Prof. LEWIS A. SAYRE, M.D., *Bellevue Hospital, New York.* "Preferred to Friedrichshall and Pullna by those who have tried them."—Prof. AITKEN, F.R.S., *Netley.* "Of great use in catarrhal conditions of the pile-ducts and bowels, and for CONGESTION of the LIVER and OTHER ORGANS."—*Medical Times and Gazette.*
3. In chronic affections of the organs of respiration and Circulation.	"Produces remarkable relief in chronic diseases symptomatic of affections of the abdominal and thoracic organs, and in serous effusions with impediment of respiration and circulation."—Prof. ALOIS MARTIN, *Royal Medical Councillor, University of Munich.*
4. Against hæmorrhoids, and portal and hepatic congestion.	"The most certain and the most comfortable in its action of all the aperient waters. The special indications for its use are, in costiveness (especially in that of pregnancy), in portal congestion with tendency to hæmorrhoids, and in sluggish action of the liver."—Inspector-General MACPHERSON, M.D., *Author of "Baths and Wells of Europe."*
5. During pregnancy; for nursery use; and in many female disorders.	"I prescribe none but this."—Baron v. SCANZONI, *Wurzburg.* "I prefer this to any and every other."—Dr. MARION SIMS, *New York, Honorary Fellow Obstetrical Society of London and Dublin.*
6. In bilious attacks and sick headaches.	"I have made use of the Hunyadi Janos mineral water ever since its introduction into this country, and with ever increasing satisfaction. It is highly beneficial to persons of sedentary habit, and in what are called bilious attacks."—Dr. SILVER, *Lecturer on Clinical Medicine, Charing-Cross Hospital.*
7. Against evil consequences of indiscretion in Diet.	"Has invariably good and prompt success: a most valuable item in the balneological treasury."—Prof. VIRCHOW, *Berlin.*

For ordinary aperient purposes a half wineglassful of the Hunyadi Water may be taken at bed-time, or a wineglassful taken in the morning fasting. It is most efficacious when warmed to a temperature not below 60 deg., or when an equal quantity of hot water is added to it.

HUNYADI JANOS MINERAL WATER.
INDISPENSABLE TO THE TRAVELLING PUBLIC.

To secure the genuine Water, require bottles with a blue label bearing the name

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly,
SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With Hops (Plain)*,	$1.00

NEW HYPODERMIC SYRINGES.

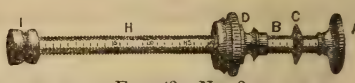

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02

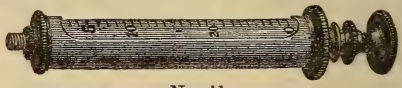
No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).



No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz.	$1.00
" (" ").....per doz.	10.00
" (in ½ lb ").....per lb.	12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 JACKSON STREET, CHICAGO, ILL.

Our valuable pamphlet "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

MIAMI MEDICAL COLLEGE OF CINCINNATI.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

The Preliminary Term of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

The Regular Winter Session will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.

WM. H. TAYLOR, M.D., Secretary, 329 West Seventh Street.

1160-1185

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page* 58 *of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice:—**Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUCERA & CO., Agents,

NEW YORK.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

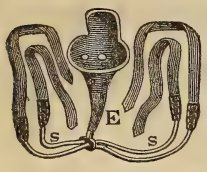
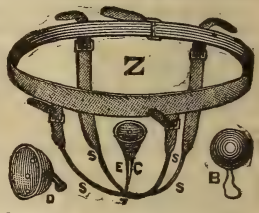
STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top: Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. ***Self Sustaining.***—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. ***Cup D.***—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see ***Catalogue.*** The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.



$1.50 $1.50

All the Instruments and Catalogue obtained through this Office.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,

DETROIT MEDICAL COLLEGE.

(MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.)

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

A MANUAL OF
EXAMINATION OF THE EYES.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

By Dr. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America. We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day. This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and relations of the optic nerve and its sheaths. I believe that it is unique; at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime inportance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

PUBLISHED AND FOR SALE BY

D. G. BRINTON,

115 South Seventh Street, Philadelphia.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. Danforth, M.D., Pathology; John E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine; Daniel R. Brower, M.D., Secretary, Nervous and Mental Diseases; Sarah Hackett Stevenson, M.D., Corresponding Secretary, Physiology; David W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry; Wm. J. Maynard, A.M., M.D., Therapeutics and Dermatalogy; Wm. T. Montgomery, M.D., Eye and Ear; E. Fletcher Ingals, M.D., Diseases of Chest and Throat; John O. Hobbs, M.D., Demonstrator.

BETHESDA WATER.

The following will show the wonderful effects of Bethesda in Dropsy (probably Bright's Disease), in its last stages. The patient had been given up to die by two physicians. It also shows that Bethesda will relieve obstinate cases of constipation.

SAUK CITY, WIS., April 20, 1878.

DEAR SIR:—Your letter of March 20th was received. I called to see Mr. Lenz immediately after receiving it, but did not find him at home, and so had not an opportunity of seeing him for some time, although he lives but a few steps from my house. Was called to see Mr. Lenz last January, 23d. Found him in a darkened room, in bed, complaining of almost constant headache, so severe that he could not bear the light; had general dropsy (anasarca); examined his urine and found it loaded with albumen; indeed, I never saw a specimen of urine so full of albumen. I prescribed for him, with no benefit; called occasionally to see him and found him constantly failing; gave up prescribing for him (except some laxative pills to keep his bowels open, which were obstinately constipated), as I considered his case a hopeless one; and the physician who attended him before pronounced his case one of the worst cases of Bright's Disease he had ever seen. When I received your circular (not, however, having any hope that Bethesda could benefit so bad a case), I called his attention to it, through a friend of his. He at once asked me to order him some, as he had lost all confidence in medicines, and had given up in despair of relief. He says that in the first twenty-four hours after commencing to drink the water he felt a change; for the first few days dropsical swelling seemed to increase, and then gradually diminished until it entirely disappeared, until now he is free from it; pain, also, in the region of the kidneys (which I forgot to mention), is now all gone. His appetite has improved until it is now regular and quite good. He has improved gradually and steadily ever since he has been using Bethesda. He is now able to walk all over town and attend to business, and looks quite well; in fact, seems to be nearly well.

☞ Soon after commencing to drink the water his bowels became regular; he supposed, however, it was not the effect of the water, but being without it for four or five days he had to resort to pills again, until he again commenced drinking the water, when the bowels again became regular. Mr. Lenz is the proprietor of a brewery, and is well known throughout the community, and I presume has a large number of acquaintances in Milwaukee. He has always been temperate in his habits. He says Bethesda has done wonders for him. Please examine this hasty and disconnected scrawl.

Yours respectfully,

J. HOTRING, M.D.

General Agent for Pennsylvania, Ohio and West Virginia,

JOSEPH FLEMING,

WHOLESALE AND RETAIL DRUGGIST,

84 Market St., Cor. Diamond, Pittsburg, Pa.

☞ Pamphlets mailed free.

PRICE—50 cents per gallon; $4 per quarter barrel; $8 per half barrel; $16 per barrel.

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

WHEELER CHEMICAL WORKS,

HINTS IN THE OBSTETRIC PROCEDURE.

BY

WILLIAM B. ATKINSON, A.M., M.D.,

Lecturer on Diseases of Children, at the Jefferson Medical College; Physician to the Department of Obstetrics and Diseases of Women, Howard Hospital, Philad'a.

SECOND EDITION. ENTIRELY RE-WRITTEN AND ENLARGED. 12MO, CLOTH. PRICE, $1.00.

—o—

The very gratifying reception given this handbook of the essentials of the obstetrical art has led the author to submit it to a careful revision, and increase its size by adding a number of new topics.

It may safely be characterized as the most convenient, compact, reliable and handy *vade mecum* on obstetrics in the language; as the following personal and editorial statements sufficiently attest.

OPINIONS OF PHYSICIANS AND THE PRESS.

"It is really a '*multum in parvo*,' and will, I am sure, be of great service to multitudes in the profession who have hitherto followed the routine of old traditions."—*Prof. Fordyce Barker.*

"It is as good for the old as for the young practitioner."—*Dr. J. Marion Sims.*

"It abounds in extremely valuable hints, and is calculated to do much good."—*Prof. Goodell.*

"Founded upon the personal experience of the author, it must prove of value to the very wide circle of the profession who will be led to purchase it by their acquaintance with the author and his reputation."—(Philadelphia) *Medical Times.*

For Sale by D. G. BRINTON,

115 SOUTH SEVENTH STREET, PHILA.

COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious, pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

LESSONS IN GYNECOLOGY.

By WM. GOODELL, A.M., M.D.,

Professor of Clinical Gynecology in the University of Pennsylvania.

WITH NUMEROUS ILLUSTRATIONS.

1 Vol., 8vo. Price, Cloth, $3.00.

This entirely new and complete work by this distinguished author cannot fail to prove a valuable addition to gynecological literature. The following table of contents will indicate its scope:—

Lesson	I.	Gynecological Instruments.
"	II.	Caruncle, and other Affections of the Female Urethra.
"	III.	Vesical Diseases of Women.
"	IV.	Fistulæ of the Female Genital Organs.
"	V.	Closure of the Vulva for Incurable Vesico-vaginal Fistulæ—Tumors of the Vulva.
"	VI.	On the Causes, Prevention, and the Cure of Lacerations of the Female Perineum; the Primary Operation.
"	VII.	Secondary Operation for Laceration of the Female Perineum.
"	VIII.	Local and Constitutional Treatment for Chronic Metritis and Endometritis.
"	IX.	Retroversions and Retroflexions of the Womb.
"	X.	Anteversions and Anteflexions of the Womb.
"	XI.	Dilatation of Cervical Canal; Rapid Dilatation; Tents.
"	XII.	On the Use of the Closed Lever Pessary, and of the Intra-uterine Stem Pessary.
"	XIII.	Different Kinds of Pessaries; Abdominal Supporters.
Lesson	XIV.	Prolapse of the Womb; Prolapse from Simple Descent; Prolapse from Hypertrophic Elongation of the Infra-vaginal portion of Cervix.
"	XV.	Prolapse of the Womb from Hypertrophic Elongation of the Supra-vaginal Portion of the Cervix.
"	XVI.	Laceration of the Cervix Uteri.
"	XVII.	Cancer of the Womb.
"	XVIII.	Vegetations of the Endometrium.
"	XIX.	Polypus of the Womb.
"	XX.	Fibroid Tumors of the Womb.
"	XXI.	Treatment of Fibroid Tumors of the Womb.
"	XXII.	Spaying for Fibroid Tumors, and for other Diseases of the Womb.
"	XXIII.	Ovarian Cyst; its Diagnosis, and its Treatment by Tapping, by injections of Iodine, and by Drainage.
"	XXIV.	Ovariotomy by Abdominal Section.
"	XXV.	Vaginal Ovariotomy.
"	XXVI.	Nerve-tire and Womb-ills, or the Relation which the Nerves bear to the Diseases of Women.
"	XXVII.	The Prevention of Uterine Disorders.
"	XXVIII.	The Sexual Relations as Causes of Uterine Disorders.

NOTICES OF THE PRESS.

"As a work for practitioners, this book has no equal. Dr. Goodell, by his great industry, accurate observations and study, and his always practical suggestions, has justly won for himself in America a name, as a practical gynecologist, second only to that of the ever illustrious Sims. Hence this book must be in the hands of every gynecologist, as it should be thoroughly read by every practitioner."—*Virginia Medical Monthly*, August, 1879.

"An extremely practical book. . . It has a decided originality. . . We can mention larger, more thorough and exhaustive books, but we know none more useful or more reliable."—*The American Practitioner.*

"Every chapter is replete with the most practical suggestions in diagnosis and treatment."—*Cincinnati Lancet and Observer*, August, 1879

"These Lessons are in the highest style of clinical art, comprehensive, clear, and eliciting all the interest which a thorough knowledge of the subject and a thorough master of the pen could bring forth."—*Louisville Medical News.*

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research develcped the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained.

T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable.

J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily.

J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS' Oval Shape, Complete Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

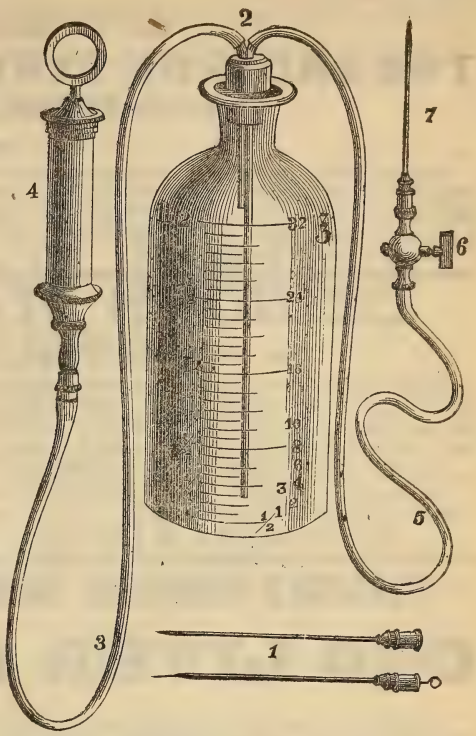
CASWELL, HAZARD & CO.,

NEW YORK.



NEW ASPIRATOR, by Dr. Potain, Paris.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer, 10 large Ivory Points, well charged on both sides	$1.50
5 large Ivory Points, " " "	.80
Large Ivory Points, less than 5, " " " each	.25
1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants, 10 small Ivory Points	1.50
1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents; per 1000	2.00
Large	per 100, 50 cents; per 1000	4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.

SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. ***See Cut.*** ***Each 25 cents.***

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

The Preliminary Term of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

The Regular Winter Session will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page* 58 *of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice :— **Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

TAMAR INDIEN;

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

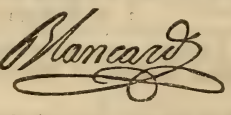
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.
without which none are genuine.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
HERRINGS & CO., "	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

1165-1190

ANIMAL

VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... **.25**
Five Whole Quills (sufficient for ten vaccinations).....**$1.00**

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address,

D. G. BRINTON, M.D.,

115 South 7th Street,

PHILADELPHIA,

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. Danforth, M.D., Pathology; John E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine; Daniel R. Brower, M.D., Secretary, Nervous and Mental Diseases; Sarah Hackett Stevenson, M.D., Corresponding Secretary, Physiology; David W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry; Wm. J. Maynard, A.M., M.D., Therapeutics and Dermatalogy; Wm. T. Montgomery, M.D., Eye and Ear; E. Fletcher Ingals, M.D., Diseases of Chest and Throat; John O. Hobbs, M.D., Demonstrator.

For information or announcement, address either of the Secretaries, at 125 State Street.

1141–1192 W. H. BYFORD, A.M., M.D., *President.*

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

Lecture Tickets, including matriculation, $45.

College, cor. of State and Sixth Sts.; Dean's Office, 181 E. State St.

Letters of inquiry should be addressed to the Dean.

Prof. FRANCIS CARTER, M.D., Dean, Columbus, Ohio.
1150–1201

Columbus Medical College.

Preliminary Course begins September 1st.
Regular Course October 1st, 1878, and closes the last week in February, 1879.

Tickets	*$30.00*
Matriculation	*5.00*
Graduation	*25.00*
Demonstrator	*5.00*

1134–1185 D. N. KINSMAN, Dean.

BETHESDA WATER.

The following will show the wonderful effects of Bethesda in Dropsy (probably Bright's Disease), in its last stages. The patient had been given up to die by two physicians. It also shows that Bethesda will relieve obstinate cases of constipation.

SAUK CITY, WIS., April 20, 1878.

DEAR SIR:—Your letter of March 20th was received. I called to see Mr. Lenz immediately after receiving it, but did not find him at home, and so had not an opportunity of seeing him for some time, although he lives but a few steps from my house. Was called to see Mr. Lenz last January, 23d. Found him in a darkened room, in bed, complaining of almost constant headache, so severe that he could not bear the light; had general dropsy (anasarca); examined his urine and found it loaded with albumen; indeed, I never saw a specimen of urine so full of albumen. I prescribed for him, with no benefit; called occasionally to see him and found him constantly failing; gave up prescribing for him (except some laxative pills to keep his bowels open, which were obstinately constipated), as I considered his case a hopeless one; and the physician who attended him before pronounced his case one of the worst cases of Bright's Disease he had ever seen. When I received your circular (not, however, having any hope that Bethesda could benefit so bad a case), I called his attention to it, through a friend of his. He at once asked me to order him some, as he had lost all confidence in medicines, and had given up in despair of relief. He says that in the first twenty-four hours after commencing to drink the water he felt a change; for the first few days dropsical swelling seemed to increase, and then gradually diminished until it entirely disappeared, until now he is free from it; pain, also, in the region of the kidneys (which I forgot to mention), is now all gone. His appetite has improved until it is now regular and quite good. He has improved gradually and steadily ever since he has been using Bethesda. He is now able to walk all over town and attend to business, and looks quite well; in fact, seems to be nearly well.

☞ Soon after commencing to drink the water his bowels became regular; he supposed, however, it was not the effect of the water, but being without it for four or five days he had to resort to pills again, until he again commenced drinking the water, when the bowels again became regular. Mr. Lenz is the proprietor of a brewery, and is well known throughout the community, and I presume has a large number of acquaintances in Milwaukee. He has always been temperate in his habits. He says Bethesda has done wonders for him. Please examine this hasty and disconnected scrawl.

Yours respectfully,

J. HOTRING, M.D.

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

WHEELER CHEMICAL WORKS,

COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

WILLIAM DARLING, A.M., M.D., F.R.C.S., LL.D., New York City, Professor of General and Special Anatomy.

HENRY D. HOLTON, A.M., M.D., Brattleboro, Vt., Professor of Materia Medica and General Pathology. Consulting Surgeon to Mary Fletcher Hospital.

JAMES L. LITTLE, M.D., New York City, Professor of the Principles and Practice of Surgery. Consulting Surgeon to Mary Fletcher Hospital.

A. P. GRINNELL, M.D., Burlington, Vt., Professor of Physiology and Microscopic Anatomy. Attending Physician to Mary Fletcher Hospital.

RUDOLPH A. WITTHAUS, M.D., New York City. Professor of Chemistry and Toxicology.

PROFESSORS FOR SPECIAL SUBJECTS.

WILLIAM A. HAMMOND, M.D., Surgeon-General U. S. Army (Retired). New York City, Professor of the Diseases of the Mind and Nervous System.

ROBERT W. TAYLOR, M.D., New York City, Professor of Diseases of the Skin.

A. T. WOODWARD, M.D., Brandon, Vt., Professor of the Surgical Diseases of Women. Consulting Physician to Mary Fletcher Hospital.

D. B. ST. JOHN ROOSA, M.D., New York City, Professor of the Diseases of the Eye and Ear.

STEPHEN M. ROBERTS, M.D., New York City, Professor of Diseases of Children.

GEORGE M. GARLAND, M.D., Boston, Mass., Professor of Thoracic Diseases.

LEROY M. BINGHAM, M.D., Burlington, Vt., Demonstrator of Anatomy. Attending Physician to Mary Fletcher Hospital.

CLINTON WAGNER, M.D., New York City, Professor of Diseases of the Throat.

HOSPITAL ADVANTAGE.—The Mary Fletcher Hospital, with its commodious amphitheatre, is open for clinical instruction during this session. The Medical and Surgical Clinics of the College will be held in the amphitheatre attached to the Hospital. In addition to these regular clinics of the College, instructions will be given at the bedside by the Professors of the Medical Department of the University.

LECTURES ON SPECIAL SUBJECTS.—These lectures, by gentlemen well-known as authorities recognized in their particular departments, will be delivered during the regular session.

CLINIQUES.—Besides these lectures, there will be Cliniques held as follows:—

SURGICAL CLINIQUE, by Professor Little, every Saturday, from 9 to 12, during the last half of the session.

MEDICAL CLINIQUE, by Professor Carpenter, on Wednesday morning, during first half of the term.

CLINIQUE FOR DISEASES OF NERVOUS SYSTEM, by Professor Hammond, during his course.

CLINIQUE FOR DISEASES OF EYE AND EAR, by Professor Roosa, during his course of lectures.

CLINIQUES FOR DISEASES OF SKIN, by Professor Taylor, during his course.

CLINIQUE FOR DISEASES OF CHILDREN, by Professor Roberts.

CLINIQUE FOR THORACIC DISEASES, by Professor Geo. M. Garland M.D.

CLINIQUE FOR DISEASES OF THROAT, by Professor Clinton Wagner.

THE PRELIMINARY TERM, consisting of a course of Lectures and Recitations in the various branches of Medicine and Surgery, will begin on the first Thursday of Nov., 1879, and continue until March 1st, 1880. FEE, $30.

THE REGULAR WINTER SESSION will commence on the first Thursday of March, 1880, and continue sixteen weeks. This course will consist of from five to six lectures daily, in the various departments of Medicine and Surgery.

FEES FOR THE REGULAR SESSION.

MATRICULATION FEE, PAYABLE EACH TERM.....$ 5 00
FEES FOR THE FULL COURSE OF LECTURES by all the Professors.. 70 00
GRADUATION FEE..... 25 00

Material for dissection will be furnished at cost. The tickets are to be taken out at the beginning of the session. Students who have already attended two full courses of lectures in other regular schools, are admitted on paying the matriculation fee and $25. Students who have attended two full courses in this College, or who have attended one full course in some regularly established medical school, and one full course in this College, are admitted to a third course of lectures on paying the matriculation fee only. GRADUATES of this school are admitted without fee. GRADUATES of other regular schools and *Theological Students* are admitted on general ticket, by paying the matriculation fee. Good board can be obtained at reasonable rates.

For further particulars and Circular, apply to the Secretary,

1181-1206eow **Prof. A. P. GRINNELL, M.D., Burlington, Vt.**

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" — *Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

FOOD IS THE BEST TONIC!!

MENSMAN'S

PEPTONIZED

BEEF TONIC.

The great necessity for a fluid food that would possess *all the elements necessary for the support of the system,* having been long felt by the medical profession, we call attention to this preparation, containing the entire nutritious properties of the muscular fibre, blood, bone, and brain of a healthy bullock, dissolved and semi-digested by aid of heat and pepsin, and preserved by spirit; thus constituting a most perfect nutritive, reconstructive tonic.

It is not a mere stimulant, like the now fashionable extracts of beef, but contains blood-making, force-generating, and life-sustaining properties, pre-eminently calculated to support the system under the exhausting and wasting process of fevers and other acute diseases, and to rebuild and recruit the tissues and forces, whether lost in the destructive march of such affections, or induced by overwork, general debility, or the more tedious forms of chronic disease.

It is friendly and helpful to the most delicate stomach, and where there is a fair remnant to build on, will reconstruct the most shattered and enfeebled constitution. It is entirely free from any drugs.

It is prepared after a thoroughly tested and scientific method.

HUNYADI JANOS MINERAL WATER.

THE BEST AND CHEAPEST

NATURAL APERIENT.

THE BRITISH MEDICAL JOURNAL.

"HUNYADI JANOS.—The most agreeable, safest and most efficacious aperient water which has been brought under our notice."

LONDON MEDICAL RECORD.

"*Hunyadi Janos.*—The most pleasant and, owing to the smallness of its dose, the CHEAPEST of all the natural Aperient Waters."

THE LANCET.

"HUNYADI JANOS.—Baron Liebig affirms that its richness in aperient salts surpasses that of all other known waters."

From Prof. MACNAMARA, Prof. of Materia Medica, Royal College of Surgeons in Ireland.

"Far the most valuable and palatable of our Aperient Mineral Waters. I have been agreeably surprised with the result of a clinical investigation."

Specially approved by the Academy of Medicine of Paris, and its Sale in France authorized by decree of the French Government.

Medals awarded: Lyons, 1872. Vienna, 1873. Paris, 1878.

USES OF HUNYADI JANOS	ACCORDING TO OPINIONS OF EMINENT AUTHORITIES.
1. For habitual constipation.	"None so prompt, mild, and can be so well borne for a length of time."—Prof. SPIEGELBERG, *University of Breslau.*
2. By persons inclined to obesity, congestive and gouty disorders.	"I have used the Hunyadi Janos water in many cases of the rheumatic and gouty diathesis with very marked benefit. In cases accompanied with great obesity I prefer it to any other laxative."—Prof. LEWIS A. SAYRE, M.D., *Bellevue Hospital, New York.* "Preferred to Friedrichshall and Pullna by those who have tried them."—Prof. AITKEN, F.R.S., *Netley.* "Of great use in catarrhal conditions of the pile-ducts and bowels, and for CONGESTION of the LIVER and OTHER ORGANS."—*Medical Times and Gazette.*
3. In chronic affections of the organs of respiration and Circulation.	"Produces remarkable relief in chronic diseases symptomatic of affections of the abdominal and thoracic organs, and in serous effusions with impediment of respiration and circulation."—Prof. ALOIS MARTIN, *Royal Medical Councillor, University of Munich.*
4. Against hæmorrhoids, and portal and hepatic congestion.	"The most certain and the most comfortable in its action of all the aperient waters. The special indications for its use are, in costiveness (especially in that of pregnancy), in portal congestion with tendency to hæmorrhoids, and in sluggish action of the liver."—Inspector-General MACPHERSON, M.D., *Author of "Baths and Wells of Europe."*
5. During pregnancy; for nursery use; and in many female disorders.	"I prescribe none but this."—Baron v. SCANZONI, *Wurzburg.* "I prefer this to any and every other."—Dr. MARION SIMS, *New York, Honorary Fellow Obstetrical Society of London and Dublin.*
6. In bilious attacks and sick headaches.	"I have made use of the Hunyadi Janos mineral water ever since its introduction into this country, and with ever increasing satisfaction. It is highly beneficial to persons of sedentary habit, and in what are called bilious attacks."—Dr. SILVER, *Lecturer on Clinical Medicine, Charing-Cross Hospital.*
7. Against evil consequences of indiscretion in Diet.	"Has invariably good and prompt success: a most valuable item in the balneological treasury."—Prof. VIRCHOW, *Berlin.*

For ordinary aperient purposes a half wineglassful of the Hunyadi Water may be taken at bed-time, or a wineglassful taken in the morning fasting. It is most efficacious when warmed to a temperature not below 60 deg., or when an equal quantity of hot water is added to it.

HUNYADI JANOS MINERAL WATER.

INDISPENSABLE TO THE TRAVELLING PUBLIC.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

Tins, 1*s*, 2*s*, 5*s*, 10*s*.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,			*With Hops (Plain),*	$1.00

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin.....8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine.....6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....	per oz. $1.00
" (" ").....	per doz. 10.00
" (in ½ ℔ ").....	per ℔. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 JACKSON STREET, CHICAGO, ILL.

Our valuable pamphlet "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

WM. L. DUDLEY, Demonstrator of Chemistry.

The Preliminary Term of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

The Regular Winter Session will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.	

JOHN A. MURPHY, M.D., Dean, 1160-1185 *163 West Seventh Street.*

WM. H. TAYLOR, M.D., Secretary, *329 West Seventh Street.*

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page 58 of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice:—**Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine,* large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia,* and especially *Propylamin,* all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis,* and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUCERA & CO., Agents,

NEW YORK.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

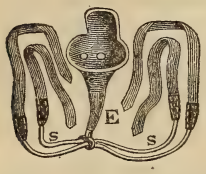
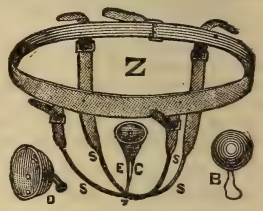
STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. *Self Sustaining.*—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. *Cup D.*—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see *Catalogue*. The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.



$1.50 $1.50

All the Instruments and Catalogue obtained through this Office.

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

DETROIT MEDICAL COLLEGE.

(MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.)

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

1165-1190

ANIMAL

VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... **.25**
Five Whole Quills (sufficient for ten vaccinations).....**$1.00**

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address,

D. G. BRINTON, M.D.,

115 South 7th Street,

PHILADELPHIA,

1183- GENERAL AGENT.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. Danforth, M.D., Pathology; John E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine; Daniel R. Brower, M.D., Secretary, Nervous and Mental Diseases; Sarah Hackett Stevenson, M.D., Corresponding Secretary, Physiology; David W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry; Wm. J. Maynard, A.M., M.D., Therapeutics and Dermatalogy; Wm. T. Montgomery, M.D., Eye and Ear; E. Fletcher Ingals, M.D., Diseases of Chest and Throat; John O. Hobbs, M.D., Demonstrator.

For information or announcement, address either of the Secretaries, at 125 State Street.

1141–1192 W. H. BYFORD, A.M., M.D., *President.*

Starling Medical College,

COLUMBUS, OHIO.

The Thirty-third Session of Starling Medical College will begin October 2, 1879, and continue until March, 1880. It will be preceded by a preliminary course beginning September 3, 1879. Extensive additions have recently been made to the Museum and other teaching facilities of the College.

FACULTY.—F. Carter, M.D., Dean; H. G. Landis, M.D.; J. H. Pooley, M.D.; S. Loving, M.D.; J. M. Wheaton, M.D.; E. B. Fullerton, M.D.; W. J. Conklin, M.D. (of Dayton); Alex. Dunlap, M.D.; Otto Frankenburg, M.D.

Lecture Tickets, including matriculation, $45.

College, cor. of State and Sixth Sts.; Dean's Office 181 E. State St.

Letters of inquiry should be addressed to the Dean.

Prof. FRANCIS CARTER, M.D., Dean, Columbus, Ohio
1150–1201

Columbus Medical College.

Preliminary Course begins September 1st.

Regular Course October 1st, 1878, and closes the last week in February, 1879.

Tickets	*$30.00*
Matriculation	*5.00*
Graduation	*25.00*
Demonstrator	*5.00*

1134–1185 D. N. KINSMAN, Dean.

BETHESDA WATER.

The following will show the wonderful effects of Bethesda in Dropsy (probably Bright's Disease), in its last stages. The patient had been given up to die by two physicians. It also shows that Bethesda will relieve obstinate cases of constipation.

SAUK CITY, WIS., April 20, 1878.

DEAR SIR:—Your letter of March 20th was received. I called to see Mr. Lenz immediately after receiving it, but did not find him at home, and so had not an opportunity of seeing him for some time, although he lives but a few steps from my house. Was called to see Mr. Lenz last January, 23d. Found him in a darkened room, in bed, complaining of almost constant headache, so severe that he could not bear the light; had general dropsy (anasarca); examined his urine and found it loaded with albumen; indeed, I never saw a specimen of urine so full of albumen. I prescribed for him, with no benefit; called occasionally to see him and found him constantly failing; gave up prescribing for him (except some laxative pills to keep his bowels open, which were obstinately constipated), as I considered his case a hopeless one; and the physician who attended him before pronounced his case one of the worst cases of Bright's Disease he had ever seen. When I received your circular (not, however, having any hope that Bethesda could benefit so bad a case), I called his attention to it, through a friend of his. He at once asked me to order him some, as he had lost all confidence in medicines, and had given up in despair of relief. He says that in the first twenty-four hours after commencing to drink the water he felt a change; for the first few days dropsical swelling seemed to increase, and then gradually diminished until it entirely disappeared, until now he is free from it; pain, also, in the region of the kidneys (which I forgot to mention), is now all gone. His appetite has improved until it is now regular and quite good. He has improved gradually and steadily ever since he has been using Bethesda. He is now able to walk all over town and attend to business, and looks quite well; in fact, seems to be nearly well.

☞ Soon after commencing to drink the water his bowels became regular; he supposed, however, it was not the effect of the water, but being without it for four or five days he had to resort to pills again, until he again commenced drinking the water, when the bowels again became regular. Mr. Lenz is the proprietor of a brewery, and is well known throughout the community, and I presume has a large number of acquaintances in Milwaukee. He has always been temperate in his habits. He says Bethesda has done wonders for him. Please examine this hasty and disconnected scrawl.

Yours respectfully,

J. HOTRING, M.D.

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.
2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.
3. Their division is rapidly effected, and with great convenience.
4. Their invariability in strength renders them capable of being prescribed with precision.
5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

SECOND EDITION. ENTIRELY RE-WRITTEN AND ENLARGED. 12MO, CLOTH. PRICE, $1.00.

—o—

The very gratifying reception given this handbook of the essentials of the obstetrical art has led the author to submit it to a careful revision, and increase its size by adding a number of new topics.

It may safely be characterized as the most convenient, compact, reliable and handy *vade mecum* on obstetrics in the language; as the following personal and editorial statements sufficiently attest.

OPINIONS OF PHYSICIANS AND THE PRESS.

"It is really a '*multum in parvo*,' and will, I am sure, be of great service to multitudes in the profession who have hitherto followed the routine of old traditions."—*Prof. Fordyce Barker.*

"It is as good for the old as for the young practitioner."—*Dr. J. Marion Sims.*

"It abounds in extremely valuable hints, and is calculated to do much good."—*Prof. Goodell.*

"Founded upon the personal experience of the author, it must prove of value to the very wide circle of the profession who will be led to purchase it by their acquaintance with the author and his reputation."—(Philadelphia) *Medical Times.*

Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

LESSONS IN GYNECOLOGY.

By WM. GOODELL, A.M., M.D.,

Professor of Clinical Gynecology in the University of Pennsylvania.

WITH NUMEROUS ILLUSTRATIONS.

1 Vol., 8vo. Price, Cloth, $3.00.

This entirely new and complete work by this distinguished author cannot fail to prove a valuable addition to gynecological literature. The following table of contents will indicate its scope:—

Lesson	I.	Gynecological Instruments.
"	II.	Caruncle, and other Affections of the Female Urethra.
"	III.	Vesical Diseases of Women.
"	IV.	Fistulæ of the Female Genital Organs.
"	V.	Closure of the Vulva for Incurable Vesico-vaginal Fistulæ—Tumors of the Vulva.
"	VI.	On the Causes, Prevention, and the Cure of Lacerations of the Female Perineum; the Primary Operation.
"	VII.	Secondary Operation for Laceration of the Female Perineum.
"	VIII.	Local and Constitutional Treatment for Chronic Metritis and Endometritis.
"	IX.	Retroversions and Retroflexions of the Womb.
"	X.	Anteversions and Anteflexions of the Womb.
"	XI.	Dilatation of Cervical Canal; Rapid Dilatation; Tents.
"	XII.	On the Use of the Closed Lever Pessary, and of the Intra-uterine Stem Pessary.
"	XIII.	Different Kinds of Pessaries; Abdominal Supporters.
Lesson	XIV.	Prolapse of the Womb; Prolapse from Simple Descent; Prolapse from Hypertrophic Elongation of the Infra-vaginal portion of Cervix.
"	XV.	Prolapse of the Womb from Hypertrophic Elongation of the Supra-vaginal Portion of the Cervix.
"	XVI.	Laceration of the Cervix Uteri.
"	XVII.	Cancer of the Womb.
"	XVIII.	Vegetations of the Endometrium.
"	XIX.	Polypus of the Womb.
"	XX.	Fibroid Tumors of the Womb.
"	XXI.	Treatment of Fibroid Tumors of the Womb.
"	XXII.	Spaying for Fibroid Tumors, and for other Diseases of the Womb.
"	XXIII.	Ovarian Cyst; its Diagnosis, and its Treatment by Tapping, by injections of Iodine, and by Drainage.
"	XXIV.	Ovariotomy by Abdominal Section.
"	XXV.	Vaginal Ovariotomy.
"	XXVI.	Nerve-tire and Womb-ills, or the Relation which the Nerves bear to the Diseases of Women.
"	XXVII.	The Prevention of Uterine Disorders.
"	XXVIII.	The Sexual Relations as Causes of Uterine Disorders.

NOTICES OF THE PRESS.

"As a work for practitioners, this book has no equal. Dr. Goodell, by his great industry, accurate observations and study, and his always practical suggestions, has justly won for himself in America a name, as a practical gynecologist, second only to that of the ever illustrious Sims. Hence this book must be in the hands of every gynecologist, as it should be thoroughly read by every practitioner."—*Virginia Medical Monthly*, August, 1879.

"An extremely practical book. . . It has a decided originality. . . We can mention larger, more thorough and exhaustive books, but we know none more useful or more reliable."—*The American Practitioner.*

"Every chapter is replete with the most practical suggestions in diagnosis and treatment."—*Cincinnati Lancet and Observer*, August, 1879

"These Lessons are in the highest style of clinical art, comprehensive, clear, and eliciting all the interest which a thorough knowledge of the subject and a thorough master of the pen could bring forth."—*Louisville Medical News.*

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in eve y respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia*, *Chlorosis*, *Cachexias*, *Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away*.

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue**, and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints, the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

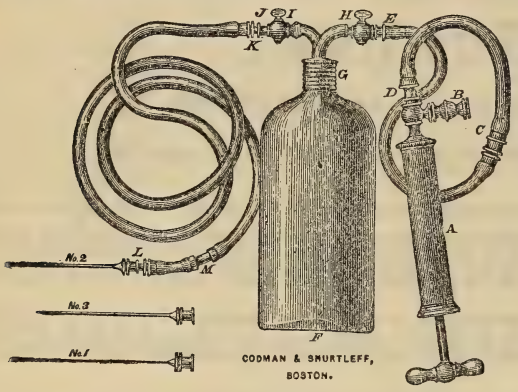

Fig. 68.

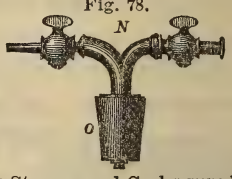
Fig. 77.

Fig. 78.



The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator, Nickel-plated, with two Needles, Tubes, etc., in case $14 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, postpaid, on application.

UNIVERSITY OF VERMONT.

MEDICAL DEPARTMENT, BURLINGTON, Vt.

TWENTY-SEVENTH SESSION, 1880.

FACULTY OF MEDICINE.

MATTHEW HENRY BUCKHAM, A.M., D.D., Burlington, Vt., President.
SAMUEL WHITE THAYER, M.D. L.L.D., Burlington, Vt., Emeritus Professor of General and Special Anatomy. Consulting Surgeon to Mary Fletcher Hospital.
WALTER CARPENTER, M.D., Burlington, Vt., Professor of the Theory and Practice of Medicine. Consulting Physician to Mary Fletcher Hospital.
JOHN ORDRONAUX, M.D., L.L.D., New York City, Emeritus Professor of Medical Jurisprudence.
A. F. A. KING, M.D., Washington, D. C., Professor of Obstetrics and the Diseases of Women. Consulting Physician to Mary Fletcher Hospital.
WILLIAM DARLING, A.M., M.D., F.R.C.S., LL.D., New York City, Professor of General and Special Anatomy.
HENRY D. HOLTON, A.M., M.D., Brattleboro, Vt., Professor of Materia Medica and General Pathology. Consulting Surgeon to Mary Fletcher Hospital.
JAMES L. LITTLE, M.D., New York City, Professor of the Principles and Practice of Surgery. Consulting Surgeon to Mary Fletcher Hospital.
A. P. GRINNELL, M.D., Burlington, Vt., Professor of Physiology and Microscopic Anatomy. Attending Physician to Mary Fletcher Hospital.
RUDOLPH A. WITTHAUS, M.D., New York City, Professor of Chemistry and Toxicology.

PROFESSORS FOR SPECIAL SUBJECTS.

WILLIAM A. HAMMOND, M.D., Surgeon-General U. S. Army (Retired). New York City, Professor of the Diseases of the Mind and Nervous System.
ROBERT W. TAYLOR, M.D., New York City, Professor of Diseases of the Skin.
A. T. WOODWARD, M.D., Brandon, Vt., Professor of the Surgical Diseases of Women. Consulting Physician to Mary Fletcher Hospital.
D. B. ST. JOHN ROOSA, M.D., New York City, Professor of the Diseases of the Eye and Ear.
STEPHEN M. ROBERTS, M.D., New York City, Professor of Diseases of Children.
GEORGE M. GARLAND, M.D., Boston, Mass., Professor of Thoracic Diseases.
LEROY M. BINGHAM, M.D., Burlington, Vt., Demonstrator of Anatomy. Attending Physician to Mary Fletcher Hospital.
CLINTON WAGNER, M.D., New York City, Professor of Diseases of the Throat.

HOSPITAL ADVANTAGE.—The Mary Fletcher Hospital, with its commodious amphitheatre, is open for clinical instruction during this session. The Medical and Surgical Clinics of the College will be held in the amphitheatre attached to the Hospital. In addition to these regular clinics of the College, instructions will be given at the bedside by the Professors of the Medical Department of the University.

LECTURES ON SPECIAL SUBJECTS.—These lectures, by gentlemen well-known as authorities recognized in their particular departments, will be delivered during the regular session.

CLINIQUES.—Besides these lectures, there will be Cliniques held as follows:—

SURGICAL CLINIQUE, by Professor Little, every Saturday, from 9 to 12, during the last half of the session.
MEDICAL CLINIQUE, by Professor Carpenter, on Wednesday morning, during first half of the term.
CLINIQUE FOR DISEASES OF NERVOUS SYSTEM, by Professor Hammond, during his course.
CLINIQUE FOR DISEASES OF EYE AND EAR, by Professor Roosa, during his course of lectures.
CLINIQUES FOR DISEASES OF SKIN, by Professor Taylor, during his course.
CLINIQUE FOR DISEASES OF CHILDREN, by Professor Roberts.
CLINIQUE FOR THORACIC DISEASES, by Professor Geo. M. Garland M.D.
CLINIQUE FOR DISEASES OF THROAT, by Professor Clinton Wagner.

THE PRELIMINARY TERM, consisting of a course of Lectures and Recitations in the various branches of Medicine and Surgery, will begin on the first Thursday of Nov., 1879, and continue until March 1st, 1880. FEE, $30.

THE REGULAR WINTER SESSION will commence on the first Thursday of March, 1880, and continue sixteen weeks. This course will consist of from five to six lectures daily, in the various departments of Medicine and Surgery.

FEES FOR THE REGULAR SESSION.

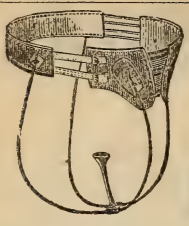
MATRICULATION FEE, PAYABLE EACH TERM.....$ 5 00
FEES FOR THE FULL COURSE OF LECTURES by all the Professors.. 70 00
GRADUATION FEE..... 25 00

Material for dissection will be furnished at cost. The tickets are to be taken out at the beginning of the session. Students who have already attended two full courses of lectures in other regular schools, are admitted on paying the matriculation fee and $25. Students who have attended two full courses in this College, or who have attended one full course in some regularly established medical school, and one full course in this College, are admitted to a third course of lectures on paying the matriculation fee only. GRADUATES of this school are admitted without fee. GRADUATES of other regular schools and *Theological Students* are admitted on general ticket, by paying the matriculation fee. Good board can be obtained at reasonable rates.

For further particulars and Circular, apply to the Secretary,

1181-1206eow

Prof. A. P. GRINNELL, M.D., Burlington, Vt.



DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

Member of the American Medical College Association.

FACULTY.

JOHN A. MURPHY, M.D., Professor of Principles and Practice of Medicine and Clinical Medicine.
WM. H. MUSSEY, M.D., Professor of Operative and Clinical Surgery and Surgical Diseases of Women.
E. WILLIAMS, M.D., Professor of Ophthalmology, Aural Surgery and Clinical Ophthalmology.
WM. CLENDENIN, M.D., Professor of Descriptive and Surgical Anatomy.
WM. H. TAYLOR, M.D., Professor of Obstetrics and Clinical Midwifery.
THOMAS H. KEARNEY, M.D., Professor of Principles of Surgery, Surgical Diseases and Clinical Surgery.
J. C. MACKENZIE, M.D., Professor of Physiology and Pathology and Clinical Medicine.
J. F. JUDGE, M.D., Lecturer on Chemistry and Toxicology.
WM. B. DAVIS, M.D., Professor of Materia Medica and Therapeutics.
BYRON STANTON, M.D., Professor of Diseases of Women and Children and Clinical Gnyæcology.
WM. H. DE WITT, M.D., Lecturer on Mental Diseases.
B. P. GOODE, M.D., Lecturer on Diseases of Children.
ROBT. SATTLER, M.D., Lecturer on Diseases of the Eye and Ear.
A. D. BENDER, M.D., Lecturer on Laryngoscopy and Diseases of the Throat, and Demonstrator of Anatomy.
C. A. LE BOUTILLIER, M.D., Lecturer on Surgical Dressings.
CHAS. W. MATHERS, M.D., Demonstrator of Anatomy.
WM. L. DUDLEY, Demonstrator of Chemistry.

☞ THE PRELIMINARY TERM of Lectures will begin September 3d, 1879, and continue one month. This Course will be one of *unusual interest and importance* to physicians as well as students.

THE REGULAR WINTER SESSION will begin October 1st, 1879, and continue five months. This course will consist of Didactic Lectures with Demonstrations, Recitations, Clinical and Special Instruction, involving Physical Manipulations. From five to six Didactic Lectures and Demonstrations are delivered daily, covering the general topics of Medicine and Surgery as taught in all regular medical colleges.

CLINICS.—The Faculty confidently announce that students have, in this college, unsurpassed clinical advantages. *Four Special Clinics* are held daily, in the college building (at which more than six thousand patients are examined annually), viz.: In Practice, Surgery, Gynæcology, Diseases of Children, Ophthalmology and Larnygology, in all of which advanced students have opportunities to make full examinations, especially in *Thoracic Diseases* and *Gynæcology*, and frequently to witness *Obstetric* cases. These clinics are free to students of the college. Two clinical lectures are delivered daily at the Cincinnati Hospital (near the college), during the entire college session.

The College also affords the fullest advantages in *Practical Chemistry*, *Practical Anatomy*, *Practical Physiology* and *Microscopy*.

FEES.

Matriculation fee (annually)	$ 5 00	Demonstrator's Ticket	$5 00
Regular Lecture Term	75 00	Hospital Ticket	5 00
Graduation Fee	25 00	Alumni of this institution free.

BARON LEIBIG, the greatest authority on Infant Diet, states that the majority of children who die under one year of age, do so from the effects of improper food, or from the improper administration of the food.

HORLICK'S FOOD.

A Concentrated Extract, prepared according to the Formula of Baron Liebig, and, unlike other Foods,

IS NOT FARINACEOUS.

It is acknowledged by Physicians to be the best Food

For Infants, Dyspeptics and Invalids.

Prof. J. Lewis Smith Says,

Speaking of **HORLICK'S FOOD:** "Being carefully prepared, according to Liebig's Formula, by Chemists fully competent, it possesses certain advantages, such as quick and easy preparation and a pleasant flavor, and is therefore highly esteemed by those who have used it." [*Page* 58 *of the fourth edition of a Treatise on Diseases of Infancy and Childhood. By J. Lewis Smith, M. D., etc.*—1879] Also, speaking in another place [page 647] of artificial food for infants, especially those suffering from intestinal catarrh, he says: "I prefer Liebig's, especially **HORLICK'S** preparation of it."

Report from Bellevue Hospital, New York.

In *The Hospital Gazette* for February 6th. 1879 [page 108] Dr. E. Hochheimer makes a report from BELLEVUE HOSPITAL of a case of Infantile Paralysis, which was followed by an exhausting diarrhœa—Speaking of the treatment, he says: "Her condition continued unchanged for the next three weeks; she was put upon a diet consisting principally of milk, but the diarrhœa persisted in spite of opiates and astringents."

"*Nov. 17th.—Milk was stopped, and she was put upon a diet of HORLICK'S FOOD; after this she began to mend, the diarrhœa became less and finally disappeared; she began to gain flesh, and her general condition was much improved.*"

We also beg to refer, by permission, to the following eminent medical men, who have used our Food extensively in their practice :— **Prof. DeLaskie Miller,** (Rush Medical College); **Prof. Wm. H. Byford,** (Chicago Medical College); **Prof. J. Adams Allen,** (Rush Medical College); **Drs. J. P. Oliver** and **C. P. Putnam,** (Harvard Medical School); **Prof. Gawne,** (Cleveland Medical College); and several hundred others whose testimonial letters are on file in our office.

PRICE, 75 Cents per bottle. Trial Size, 40 Cents.

TAMAR INDIEN;

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de 1ère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the Introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

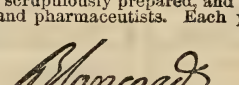
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.
without which none are genuine.

BEWARE OF IMITATIONS.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts**, and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

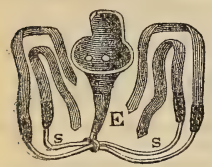
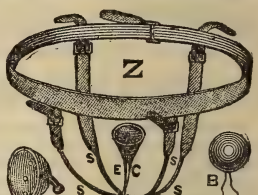
STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



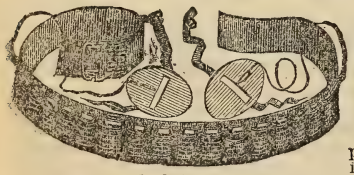
Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. *Self Sustaining.*—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. *Cup D.*—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see *Catalogue.* The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.



$1.50 $1.50

All the Instruments and Catalogue obtained through this Office.

(***Med. and Surgical Reporter.***)



DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

ANIMAL

VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... .25
Five Whole Quills (sufficient for ten vaccinations).....$1.00

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address,

D. G. BRINTON, M.D.,

115 South 7th Street,

PHILADELPHIA,

1183- GENERAL AGENT.

HINTS IN THE OBSTETRIC PROCEDURE.

By WILLIAM B. ATKINSON, A.M., M.D.,

Lecturer on Diseases of Children, at the Jefferson Medical College. Physician to the Department of Obstetrics and Diseases of Children, Howard Hospital, Philadelphia.

SECOND EDITION. ENTIRELY RE-WRITTEN AND ENLARGED.

12mo, CLOTH. PRICE, $1.00.

NOTICES OF THE SECOND EDITION.

"The charmingly informal style of the author renders the reading of the monograph a positive pleasure. Conscientiously we feel that we are working in the interests of both physician and patient when we say to all who do not own it now, order at once a copy of these *Hints* for your own use."—*The Detroit Lancet*, July, 1879.

"The author, a teacher of experience, treats his subject in a way to make it especially useful to the student, but not to the student alone."—*The Richmond and Louisville Medical Journal*, June, 1879.

"Dr. Atkinson fully appreciates the vast importance of the obstetric art in both its immediate and remote effects on mothers and children, as well as the reputation of the physician, and, in this interesting little work, gives valuable hints, which are intended to guide us in the management of women before, during, and after the termination of labor."—*Canada Journal of Medical Science*, July, 1879.

"The many valuable points cited, the practical manner in which they are stated, together with the sound views of practice enunciated, make this little monograph truly valuable."—*The Southern Practitioner*, January, 1879.

"It is the gist of the obstetric art in convenient form, and will serve to refresh the practitioner's mind in any case pertaining thereto."—*Maryland Medical Journal*, June, 1879.

"The young man without obstetric experience . . . and likewise certain practitioners who have had no inconsiderable experience and been years in gaining it, but who have not kept abreast with advancing thought and polemic literature in obstetric channels, will find themselves refreshed and enlightened by a persual of Dr. Atkinson's Hints."—*The American Practitioner*, August, 1879.

"We take pleasure, however, in commending the book to the profession, with the belief that the useful knowledge it contains will more than compensate any one for reading it."—*The Medical Herald*, July, 1879.

"This little book is just of the size to put in one's pocket when he goes out to attend a confinement case, and it is just of the kind that he will find to be useful and agreeable reading while waiting for the *denouément*. It will refresh his mind and prepare him to meet accidents which may occur."—*Michigan Medical News*, July, 1879.

TRADE MARK
[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October, 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

LESSONS IN GYNECOLOGY.

By WM. GOODELL, A.M., M.D.,

Professor of Clinical Gynecology in the University of Pennsylvania.

WITH NUMEROUS ILLUSTRATIONS.

1 Vol., 8vo. Price, Cloth, $3.00.

This entirely new and complete work by this distinguished author cannot fail to prove a valuable addition to gynecological literature. The following table of contents will indicate its scope:—

Lesson	I.	Gynecological Instruments.
"	II.	Caruncle, and other Affections of the Female Urethra.
"	III.	Vesical Diseases of Women.
"	IV.	Fistulæ of the Female Genital Organs.
"	V.	Closure of the Vulva for Incurable Vesico-vaginal Fistulæ—Tumors of the Vulva.
"	VI.	On the Causes, Prevention, and the Cure of Lacerations of the Female Perineum; the Primary Operation.
"	VII.	Secondary Operation for Laceration of the Female Perineum.
"	VIII.	Local and Constitutional Treatment for Chronic Metritis and Endometritis.
"	IX.	Retroversions and Retroflexions of the Womb.
"	X.	Anteversions and Anteflexions of the Womb.
"	XI.	Dilatation of Cervical Canal; Rapid Dilatation; Tents.
"	XII.	On the Use of the Closed Lever Pessary, and of the Intra-uterine Stem Pessary.
"	XIII.	Different Kinds of Pessaries; Abdominal Supporters.
Lesson	XIV.	Prolapse of the Womb; Prolapse from Simple Descent; Prolapse from Hypertrophic Elongation of the Infra-vaginal portion of Cervix.
"	XV.	Prolapse of the Womb from Hypertrophic Elongation of the Supra-vaginal Portion of the Cervix.
"	XVI.	Laceration of the Cervix Uteri.
"	XVII.	Cancer of the Womb.
"	XVIII.	Vegetations of the Endometrium.
"	XIX.	Polypus of the Womb.
"	XX.	Fibroid Tumors of the Womb.
"	XXI.	Treatment of Fibroid Tumors of the Womb.
"	XXII.	Spaying for Fibroid Tumors, and for other Diseases of the Womb.
"	XXIII.	Ovarian Cyst; its Diagnosis, and its Treatment by Tapping, by injections of Iodine, and by Drainage.
"	XXIV.	Ovariotomy by Abdominal Section.
"	XXV.	Vaginal Ovariotomy.
"	XXVI.	Nerve-tire and Womb-ills, or the Relation which the Nerves bear to the Diseases of Women.
"	XXVII.	The Prevention of Uterine Disorders.
"	XXVIII.	The Sexual Relations as Causes of Uterine Disorders.

NOTICES OF THE PRESS.

"As a work for practitioners, this book has no equal. Dr. Goodell, by his great industry, accurate observations and study, and his always practical suggestions, has justly won for himself in America a name, as a practical gynecologist, second only to that of the ever illustrious Sims. Hence this book must be in the hands of every gynecologist, as it should be thoroughly read by every practitioner."—*Virginia Medical Monthly*, August, 1879.

"An extremely practical book. . . It has a decided originality. . . We can mention larger, more thorough and exhaustive books, but we know none more useful or more reliable."—*The American Practitioner.*

"Every chapter is replete with the most practical suggestions in diagnosis and treatment."—*Cincinnati Lancet and Observer*, August, 1879

"These Lessons are in the highest style of clinical art, comprehensive, clear, and eliciting all the interest which a thorough knowledge of the subject and a thorough master of the pen could bring forth."—*Louisville Medical News.*

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*"—*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*"—PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

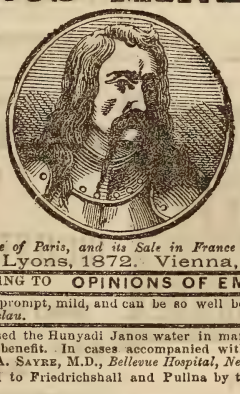
HUNYADI JANOS MINERAL WATER.

THE BEST AND CHEAPEST NATURAL APERIENT.



THE BRITISH MEDICAL JOURNAL.

"HUNYADI JANOS.—The most agreeable, safest and most efficacious aperient water which has been brought under our notice."

THE LANCET.

"HUNYADI JANOS.—Baron Liebig affirms that its richness in aperient salts surpasses that of all other known waters."

LONDON MEDICAL RECORD.

"*Hunyadi Janos.*—The most pleasant and, owing to the smallness of its dose, the CHEAPEST of all the natural Aperient Waters."

From Prof. MACNAMARA, Prof. of Materia Medica, Royal College of Surgeons in Ireland.

"Far the most valuable and palatable of our Aperient Mineral Waters. I have been agreeably surprised with the result of a clinical investigation."

Specially approved by the Academy of Medicine of Paris, and its Sale in France authorized by decree of the French Government.

Medals awarded: Lyons, 1872. Vienna, 1873. Paris, 1878.

USES OF HUNYADI JANOS ACCORDING TO	OPINIONS OF EMINENT AUTHORITIES.
1. For habitual constipation.	"None so prompt, mild, and can be so well borne for a length of time."—Prof. SPIEGELBERG, *University of Breslau.*
2. By persons inclined to obesity, congestive and gouty disorders.	"I have used the Hunyadi Janos water in many cases of the rheumatic and gouty diathesis with very marked benefit. In cases accompanied with great obesity I prefer it to any other laxative."—Prof. LEWIS A. SAYRE, M.D., *Bellevue Hospital, New York.* "Preferred to Friedrichshall and Pullna by those who have tried them."—Prof. AITKEN, F.R.S., *Netley.* "Of great use in catarrhal conditions of the pile-ducts and bowels, and for CONGESTION of the LIVER and OTHER ORGANS."—*Medical Times and Gazette.*
3. In chronic affections of the organs of respiration and Circulation.	"Produces remarkable relief in chronic diseases symptomatic of affections of the abdominal and thoracic organs, and in serous effusions with impediment of respiration and circulation."—Prof. ALOIS MARTIN, *Royal Medical Councillor, University of Munich.*
4. Against hæmorrhoids, and portal and hepatic congestion.	"The most certain and the most comfortable in its action of all the aperient waters. The special indications for its use are, in costiveness (especially in that of pregnancy), in portal congestion with tendency to hæmorrhoids, and in sluggish action of the liver."—Inspector-General MACPHERSON, M.D., *Author of "Baths and Wells of Europe."*
5. During pregnancy; for nursery use; and in many female disorders.	"I prescribe none but this."—Baron v. SCANZONI, *Wurzburg.* "I prefer this to any and every other."—Dr. MARION SIMS, *New York, Honorary Fellow Obstetrical Society of London and Dublin.*
6. In bilious attacks and sick headaches.	"I have made use of the Hunyadi Janos mineral water ever since its introduction into this country, and with ever increasing satisfaction. It is highly beneficial to persons of sedentary habit, and in what are called bilious attacks."—Dr. SILVER, *Lecturer on Clinical Medicine, Charing-Cross Hospital.*
7. Against evil consequences of indiscretion in Diet.	"Has invariably good and prompt success: a most valuable item in the balneological treasury."—Prof. VIRCHOW, *Berlin.*

For ordinary aperient purposes a half wineglassful of the Hunyadi Water may be taken at bed-time, or a wineglassful taken in the morning fasting. It is most efficacious when warmed to a temperature not below 60 deg., or when an equal quantity of hot water is added to it.

HUNYADI JANOS MINERAL WATER.

INDISPENSABLE TO THE TRAVELLING PUBLIC.

To secure the genuine Water, require bottles with a blue label bearing the name

The APOLLINARIS COMPANY, Limited, 19 Regent St., London, England.

Sole Agents for the United States, **FREDK. DE BARY & CO.,** 41 and 43 Warren St., New York.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more valuable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

SAVORY & MOORE'S BEST FOOD FOR INFANTS

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expenses of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With Hops (Plain)*,	- - - - - - - -	$1.00
" " "	*Pyrophosphate of Iron (Ferrated)*,	- - - - -	1.00

NEW HYPODERMIC SYRINGES.

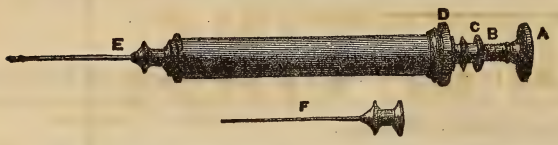

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

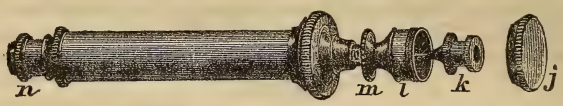
No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3 50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02



No. 3.

These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).

No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

☞ *Any of the above will be sent by return mail on receipt of Price and Postage.* ☜

HYPODERMIC SYRINGES OF ALL KINDS PROMPTLY REPAIRED.

Our new *Illustrated Catalogue of Surgical Instruments,* also a new Pamphlet on Inhalation of Atomized Liquids, by distinguished medical authority, with many valuable formulas, will be forwarded, postpaid, on application.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

LEWIS A. SAYRE, M.D.,
Professor of Orthopædic Surgery and Clinical Surgery, Bellevue Hospital Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.,
Professor of Chem., Mat. Med. and Therap. in the N. Y. College of Dent.; Prof. of Chem. and Hygiene in the Am. Vet. College, etc., etc.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

A. VAN DEVEER, M.D.,
ALBANY, N. Y., June 8th, 1878.
Prof. of the Prin. and Prac. of Surg., Albany Med. Col.; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JOHN H. PACKARD, M.D.,
PHILADELPHIA, PA., May 30th, 1878.
Pres't Phila. Co. Obstet. Society; Surg. Episcopal and Women's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D.,
PHILADELPHIA, June 20th, 1878.
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phy. to Penn. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D.,
CINCINNATI, O., June 21st, 1878.
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D.,
WASHINGTON, D. C., June 19th, 1878.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D.,
LOUISVILLE, KY., March 7th, 1878.
Prof. of the Science and Art of Surg. and Clinical Surg., University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

ROBT. BATTEY, M.D.,
ROME, GA., June 8th, 1878.
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA., June 8th, 1878.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it."

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG., February 22d, 1876.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion.

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz.	$1.00
" (" ").....per doz.	10.00
" (in ½ lb ").....per lb.	12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

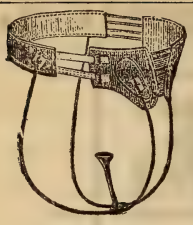
P. O. BOX 1574.

1140-1191eow



DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcomé by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

A New Pharmaceutical Preparation.

DRY EXTRACT OF MALT.

Warranted free from any adulteration whatever; made with the utmost care, from selected Canada Barley Malt. It possesses the following advantages over the liquid extracts of malt—

Dry Extract of Malt
Dry Extract of Malt
Dry Extract of Malt

Will not change or ferment in hot weather.
Will not get mouldy.
Is a more convenient and elegant preparation.
Has not the appearance of molasses.
Will make an emulsion with cod-liver oil.
Will instantly dissolve in hot water or milk.
Can be used for children and invalids in place of cane sugar.
Is only half the price of liquid extracts of malt.

Barley Water may be made by dissolving one teaspoonful in half a pint of water.

PRICE—18-oz. BOTTLE, $1.00. 8-oz. BOTTLE, 50 CTS.

In prescribing, specify HORLICK'S MALT.

Horlick's Food, for Infants and Invalids.

ENTIRELY SOLUBLE, NOT FARINACEOUS, requires NO BOILING or STRAINING; when dissolved in hot water and milk, makes the genuine Liebig's soup. We refer, by permission, to the following eminent medical men, who have used it extensively in their practice:—Professors I. LEWIS SMITH, DE LASKIE MILLER, WM. H. BYFORD, I. ADAMS ALLEN, I. P. OLIVER, C. P. PUTNAM, A. J. GAWNE, H. O. MARCY, etc., etc.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Horlick's Food, for Adults.

A pure, dry extract of malted wheat, barley and oats.

The superiority of this preparation over the liquid extracts made from these cereals, and now so extensively advertised, will be readily seen, as it does **not ferment**, and is entirely soluble in milk or water, making a highly nutritious article of diet, in a convenient and portable form, that will readily be borne by the weakest stomach.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Manufact'd by J. & W. HORLICK & CO., Racine, Wis.

Wholesale and Retail Agent,
J. F. HAYES,
St. George Pharmacy, Philadelphia.

London Agent,
F. NEWBERRY & SONS,
37 Newgate Street, London E., Eng.

Sold by Druggists everywhere.

An eight-ounce bottle of either or all of the above preparations sent FREE to physicians, on application.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUCERA & CO., Agents,

NEW YORK.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs. W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,

DETROIT MEDICAL COLLEGE.

(MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.)

SESSIONS OF 1879-'80.

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

1165-1190

ANIMAL

VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... **.25**
Five Whole Quills (sufficient for ten vaccinations).....**$1.00**

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address,

D. G. BRINTON, M.D.,

115 South 7th Street,

PHILADELPHIA,

1183- GENERAL AGENT.

HINTS IN THE OBSTETRIC PROCEDURE.

By WILLIAM B. ATKINSON, A.M., M.D.,

Lecturer on Diseases of Children, at the Jefferson Medical College. Physician to the Department of Obstetrics and Diseases of Children, Howard Hospital, Philadelphia.

SECOND EDITION. ENTIRELY RE-WRITTEN AND ENLARGED.

12mo, CLOTH. PRICE, $1.00.

NOTICES OF THE SECOND EDITION.

"The charmingly informal style of the author renders the reading of the monograph a positive pleasure. Conscientiously we feel that we are working in the interests of both physician and patient when we say to all who do not own it now, order at once a copy of these *Hints* for your own use."—*The Detroit Lancet*, July, 1879.

"The author, a teacher of experience, treats his subject in a way to make it especially useful to the student, but not to the student alone."—*The Richmond and Louisville Medical Journal*, June, 1879.

"Dr. Atkinson fully appreciates the vast importance of the obstetric art in both its immediate and remote effects on mothers and children, as well as the reputation of the physician, and, in this interesting little work, gives valuable hints, which are intended to guide us in the management of women before, during, and after the termination of labor."—*Canada Journal of Medical Science*, July, 1879.

"The many valuable points cited, the practical manner in which they are stated, together with the sound views of practice enunciated, make this little monograph truly valuable."—*The Southern Practitioner*, January, 1879.

"It is the gist of the obstetric art in convenient form, and will serve to refresh the practitioner's mind in any case pertaining thereto."—*Maryland Medical Journal*, June, 1879.

"The young man without obstetric experience . . . and likewise certain practitioners who have had no inconsiderable experience and been years in gaining it, but who have not kept abreast with advancing thought and polemic literature in obstetric channels, will find themselves refreshed and enlightened by a persual of Dr. Atkinson's Hints."—*The American Practitioner*, August, 1879.

"We take pleasure, however, in commending the book to the profession, with the belief that the useful knowledge it contains will more than compensate any one for reading it."—*The Medical Herald*, July, 1879.

"This little book is just of the size to put in one's pocket when he goes out to attend a confinement case, and it is just of the kind that he will find to be useful and agreeable reading while waiting for the *denouément*. It will refresh his mind and prepare him to meet accidents which may occur."—*Michigan Medical News*, July, 1879.

PUBLISHED AND FOR SALE BY

D. G. BRINTON,

115 South Seventh Street, Philadelphia.

COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

Prepared by J. F. HAYES,

Chemist,

ST. GEORGE PHARMACY, BROAD & WALNUT.

1177-1189

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,

Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.

2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.

3. Their division is rapidly effected, and with great convenience.

4. Their invariability in strength renders them capable of being prescribed with precision.

5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

WHEELER CHEMICAL WORKS,

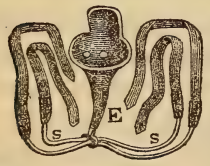
STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7 00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. ***Self Sustaining.***—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. ***Cup D.***—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see ***Catalogue.*** The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.

NOW READY!

"A work of universal interest to the medical profession, and indispensable to the student of our country's history."

A Biographical Dictionary of Contemporary American Physicians and Surgeons.

Edited by WM. B. ATKINSON, M.D.,

Permanent Secretary of the American Medical Association, and of the Pennsylvania State Medical Society; Lecturer on Diseases of Children at the Jefferson Medical College, etc.

One volume, royal octavo, double columns, 780 pages, on fine, tinted, supercalendered paper. Price: In extra cloth, beveled edges, $5.00; in full leather, $6.00.

☞ The work will be sent by mail, postage prepaid, on receipt of the price by the publisher.

This really monumental work, the fruit of enormous labor and outlay, contains the biographical sketches of more than twenty-eight hundred contemporary regular physicians of the United States, prepared from materials in most instances furnished by themselves, and hence entirely trustworthy. Indexes of names and places are appended. The effort has been made to embrace all who have visibly contributed to the advancement of medical science in all parts of the Union, and the volume presents a mass of most valuable historical, biographical and scientific material. It ranks with the collections of American medical biographies prepared by the venerable Dr. James Thacher, in 1828, and by Dr. S. L. Williams (edited by Prof. S. D. Gross, M.D.), in 1845; and as preserving innumerable facts not elsewhere recorded, it will surely have a permanent historical value for generations to come.

As it embraces not only the strictly professional aspect of the subjects selected, but also gives the facts of their political, personal and social history, its interest is not limited to medical men, but extends to all the intelligent reading classes of the community. It is a work which should be in every general library, in every collection of works of reference, and in every private library which aims to be at all complete in regard to the issues of the day in this country.

Every physician and medical student should have it, so that he may familiarize himself with the distinguished names in his own profession, and be able to judge of the legitimate claims of each; every editor should have it, in order to cull from it the facts he needs in order to write of medical men as they rise in prominence or pass to their graves; every statesman and historical student should have it, for the innumerable facts it presents of eminent men, and the light it throws on contemporary history; every intelligent general reader will find in its pages matters personal, genealogical, biographical and historical, sure to interest him in many relations.

The work is published at an unusually low price for its size and the quality of its manufacture, in the belief that it is one which deserves, and will achieve, popularity among readers of many different classes.

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

SOLUTION
FERROUS CHLORIDE.

This Solution of Iron is the lowest form of Chloride. It is much less styptic in taste than Tr. Iron Chloride, consequently pleasanter to the patient; it is much more easily assimilated by weak and irritable stomachs.

Knowing how difficult it is to introduce into the blood, in a proper form, a sufficient quantity of iron to be beneficial, we have manufactured and introduce the **Ferrous Chloride** as being easily absorbed and acting with much efficacy, even when given in small doses.

Dr. Rabuteau, who has specially studied the protochloride of iron, and shown that it is the most natural of ferruginous salts, thinks that he has found the very thing required:—

EXTRACT FROM THE REPORTS OF THE ACADEMY OF SCIENCES OF PARIS.
(*Sitting of* 11 *December*, 1871.)

". . . . . The most important thing is the facility with which the protochloride of iron is absorbed by the stomach. Two or three hours after from 4 to 10 grains of this salt have been ingested, almost the whole is absorbed. Having finally observed that the reduced iron and the ferruginous oxyds and carbonates are changed into protochloride in the stomach by the contact with the hydrochloric acid of the gastric juice, I thought it necessary to substitute this salt for all the preceding for medicinal purposes. My observations in the wards of hospitals and in my own practice have convinced me of the successful results of the protochloride of iron, which is easily borne when pure and administered in a proper way."

For details, see the memoirs on the protochloride of iron published in the *Union Médicale, Paris*, 1871 and 1872.

Each fluid drachm contains two grains of the Anhydrous **Ferrous Chloride.**

CASWELL, HAZARD & CO., Druggists and Chemists,
New York.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. **"Queen of Table Waters."**—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford, A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

E. FOUGERA, Pharmacist,
372 Seventh Street, Brooklyn, L. I.,

SOLD BY DRUGGISTS GENERALLY.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established stables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer, 10 large Ivory Points, well charged on both sides	$1.50
5 large Ivory Points, " " "	.80
Large Ivory Points, less than 5, " " " each	.25
1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants, 10 small Ivory Points	1.50
1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small per 100, 25 cents; per 1000	2.00
Large per 100, 50 cents; per 1000	4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.

SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

New Illustrated Catalogue of Surgical Instruments sent, post-paid, on request.

Dr. W. B. CARPENTER,	JULIA KAVANAGH,	TENNYSON,
FRANCES POWER COBBE,	THOMAS HARDY,	BROWNING,

and many others, are represented in the pages of

LITTELL'S LIVING AGE.

In 1880, THE LIVING AGE enters upon its thirty-seventh year, admittedly unrivalled and continuously successful. A WEEKLY MAGAZINE, of sixty-four pages, it gives more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness* attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year, Serial and Short Stories by the **Most Eminent Foreign Authors** will be given, together with an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day from the pens of the foremost Essayists, Scientists, Critics, Discoverers, and Editors, above-named and many others, representing every department of Knowledge and Progress.

The importance of THE LIVING AGE to every American reader, as the only **satisfactorily fresh and complete** compilation of a generally inaccessible but indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics,—is sufficiently indicated by the following recent

Opinions.

"The last volume of THE LIVING AGE presents a fresh example of the judgment in selection and adaptation to the demands of the best popular literature, which have secured so wide a circulation to that periodical, and given it a high place among the magazines of the day."—*New York Tribune.*

"THE LIVING AGE supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading matter, which it is well worth while to read, than any other publication . . . It is simply indispensable."—*Boston Journal.*

"It is, by all odds, the best eclectic published."—*Southern Churchman.*

"In no other single publication can there be found so much of sterling literary excellence."—*N. Y. Evening Post.*

"It has no equal in any country."—*Philadelphia Press.*

"To read it weekly is a liberal education."—*Zion's Herald, Boston.*

"Gives the best of all at the price of one."—*New York Independent.*

"It moves majestically on in the literary firmament as a star of the first magnitude, standing confessedly at the head of all the weekly publications of the civilized world. It is a library within itself."—*St. Louis Observer.*

"It being a weekly publication, is, comparatively speaking, the cheapest magazine published. Its contents are of the finest literature in our language."—*Commercial Advertiser, Detroit.*

"This noble magazine stands forth confessedly without a peer in the literary world. It is the embodiment of the purest and truest literature of the age."—*American Christian Review, Cincinnati.*

"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics, and science of the day."—*The Methodist, New York.*

"The reader finds little occasion to go beyond its columns for instructive or entertaining articles of any description."—*Boston Evening Traveller.*

"Commend us to LITTELL for a knowledge of what we ought to know, in the most portable shape, short of the latest cyclopædia."—*Boston Commonwealth.*

"We can only repeat what we have already said, that THE LIVING AGE leads all other publications of its kind, not only in years but in merit."—*Watchman, Boston.*

"As an eclectic, in the amount and value of its selections, THE LIVING AGE is without a peer."—*Presbyterian Banner, Pittsburgh.*

"It is a *thorough compilation* of what is best in the literature of the day, whether relating to history, biography, fiction, poetry, wit, science, politics, theology, criticism, or art."—*Hartford Courant.*

"There is no other way of procuring the same amount of excellent literature for anything like the same price."—*Boston Advertiser.*

"This, as we have often said, is the best eclectic we have."—*Richmond Whig.*

"Its publication in weekly numbers gives to it a great advantage over its monthly contemporaries in the spirit and freshness of its contents."—*The Pacific, San Francisco.*

"This is the most complete of all the magazines."—*Evangel, San Francisco.*

"LITTELL holds the palm against all rivals in the same field."—*Commercial, Louisville.*

"It remains altogether the best collection of the kind."—*Springfield Republican*

"The best and cheapest periodical in America."—*Evangelical Churchman, Toronto.*

"In it we find the best productions of the best writers upon all subjects ready to our hand. . . . . Through its pages alone it is possible to be as thoroughly well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Daily Register.*

PUBLISHED WEEKLY, at $8.00 a year *free of postage.* An extra copy sent *gratis* to any one getting up a club of five new subscribers.

Extra Offer for 1880.

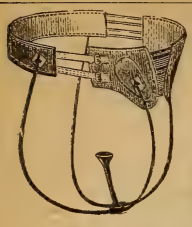
To all new subscribers for 1880 will be sent gratis the numbers of 1879 which contain, besides other interesting matter, the first chapters of "HE WHO WILL NOT WHEN HE MAY," a new story by **MRS. OLIPHANT,** now appearing in THE LIVING AGE from advance sheets.

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

["Possessed of 'LITTELL'S LIVING AGE' and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"]—*Philadelphia Evening Bulletin.*

For $10.50, THE LIVING AGE and *either* one of the *four-dollar* monthly Magazines (or *Harper's Weekly* or *Bazar*), will be sent for a year, *with postage prepaid on both;* or, for $9.50, THE LIVING AGE and the *St. Nicholas*, or *Appleton's Journal, both postpaid.*

ADDRESS **LITTELL & CO., 17 Bromfield St., Boston.**



DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

Long Island College Hospital, Brooklyn, N.Y.

ANNUAL ANNOUNCEMENT, 1879-80.

THE READING AND RECITATION TERM will commence October 2, 1879, and close at the beginning of the Regular Term. THE REGULAR TERM will open February 2, 1880, and continue five months.

FACULTY OF THE COLLEGE.

DANIEL AYRES, M.D., LL.D.,
Emeritus Professor of Surgical Pathology and Clinical Surgery.

SAMUEL G. ARMOR, M.D., LL.D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine, and Dean of the Faculty.

GEORGE W. PLYMPTON, M.D.,
Professor of Chemistry and Toxicology.

CORYDON L. FORD, M.D.,
Professor of Anatomy.

ALEXANDER J. C. SKENE, M.D.,
Professor of the Medical and Surgical Diseases of Women and Children.

JARVIS S. WIGHT, M.D.,
Professor of the Principles and Practice of Surgery and Clinical Surgery, and Registrar.

JOSEPH H. RAYMOND, M.D.,
Professor of Physiology and Microscopic Anatomy.

EDWARD SEAMAN BUNKER, M.D.,
Professor of Histology and General Pathology.

JOHN D. RUSHMORE, M.D.,
Professor of Principles and Practice of Obstetrics and Clinical Obstetrics.

JOHN A. McCORKLE, M.D.,
Lecturer on Materia Medica and Therapeutics.

The Clinical Advantages of the Long Island College Hospital are Unsurpassed in this Country.

A New Pharmaceutical Preparation.

DRY EXTRACT OF MALT.

Warranted free from any adulteration whatever; made with the utmost care, from selected Canada Barley Malt. It possesses the following advantages over the liquid extracts of malt—

Dry Extract of Malt
Dry Extract of Malt
Dry Extract of Malt

Will not change or ferment in hot weather.
Will not get mouldy.
Is a more convenient and elegant preparation.
Has not the appearance of molasses.
Will make an emulsion with cod-liver oil.
Will instantly dissolve in hot water or milk.
Can be used for children and invalids in place of cane sugar.
Is only half the price of liquid extracts of malt.

Barley Water may be made by dissolving one teaspoonful in half a pint of water.

PRICE—18-oz. BOTTLE, $1.00. 8-oz. BOTTLE, 50 CTS.

In prescribing, specify HORLICK'S MALT.

Horlick's Food, for Infants and Invalids.

ENTIRELY SOLUBLE, NOT FARINACEOUS, requires NO BOILING or STRAINING; when dissolved in hot water and milk, makes the genuine Liebig's soup. We refer, by permission, to the following eminent medical men, who have used it extensively in their practice:—Professors I. LEWIS SMITH, DE LASKIE MILLER, WM. H. BYFORD, I. ADAMS ALLEN, I. P. OLIVER, C. P. PUTNAM, A. J. GAWNE, H. O. MARCY, etc., etc.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Horlick's Food, for Adults.

A pure, dry extract of malted wheat, barley and oats.

The superiority of this preparation over the liquid extracts made from these cereals, and now so extensively advertised, will be readily seen, as it does **not ferment,** and is entirely soluble in milk or water, making a highly nutritious article of diet, in a convenient and portable form, that will readily be borne by the weakest stomach.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Manufact'd by J. & W. HORLICK & CO., Racine, Wis.

Wholesale and Retail Agent,
J. F. HAYES,

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

Prize Medal.

Silver Medal.

Gold Medal.

Medal of Merit

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, **BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE,** as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that **BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE** that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Pharmacien, No. 40 Rue Benaparte, Paris.

without which none are genuine.

SPECIAL FACTS CONCERNING

BELLADONNA PLASTER

IN RUBBER COMBINATION.

PREPARED BY

SEABURY & JOHNSON.

In undertaking the manufacture of Medicinal Plasters we had but one object in view—THE IMPROVEMENT OF ALL KINDS OF PLASTERS. Among the various plasters manufactured by us was BELLADONNA PLASTER. This article met with a larger demand than some of the others, acquired a reputation among the best druggists, and received the confidence of the profession. Its large sale interfered with rival manufacturers, and continuous efforts have been made on their part to prejudice physicians against it.

As these attacks have been of late more malicious than usual, we have deemed it advisable, in self-defence, and in order to place our article fairly before the practitioner, to assign reasons why we consider it the most thoroughly reliable preparation ever offered the medical profession. First, it is a combination of the Alcoholic Extract of Belladonna only, with purified rubber, and thus possesses all of the advantages of the rubber base, being pliable, convenient of application, and not subject to the deteriorating influence of age, as is the case when any other base is used. Secondly, it is freed from all irritative properties. Thirdly, it is more adhesive than any other plasters. Fourthly, we believe it to be as perfect, in every respect, as it is possible to make a Belladonna plaster.

ENGLISH EXTRACTS—WHY WE DO NOT EMPLOY THEM.

Imported English Extracts are prepared from the Inspissated Juice of the leaf, while our pharmacopœia formula is treated by Alcohol. The active principle of Belladonna (Atropia) is only partially obtained by Inspissation. The employment of Alcoholic or Hydro-Alcoholic Solvents completely exhausts the entire strength of the drug.

The value of both preparations is clearly presented in an able treatise published in the *American Journal of Pharmacy*, April 1876, page 145. Our own investigations are substantially identical :—

TABLE OF RESULTS,

	Test solution requisite for 100 cc. of Ext. Solution.	Percentage of Atropia in Extract.
EXT. BELLADONNÆ ALCOH. U. S. P.	*17·732*	*2·571*
GEO. ALLEN & CO., English	*9·73*	*1·411*
*HERRINGS & CO., " *	*8·133*	*1·179*
E. MERCK, Germany (aqueous extract), made 1869	*1·9*	*·275*

This analysis clearly establishes the fact that the **Alcoholic Extract of Belladonna of the U. S. P. averages over twice the strength of English Extracts,** and should, therefore, be preferred in all cases where a reliable article is desired. Inspissated and Aqueous Extracts deteriorate, while Alcoholic remain stable.

Therefore the assumption of pretentious manufacturers, that the English Extracts are the superior preparations, must be based on a former supposition rather than present facts. The following analysis substantiates our claim regarding English Extracts.

ANALYSIS OF BELLADONNA PLASTERS, BY PROF. R. OGDEN DOREMUS.

"BELLEVUE HOSPITAL COLLEGE, New York, Sept. 7, 1878.

"GENTLEMEN—I obtained from Messrs W. H. Schieffelin & Co., of this city, samples of Belladonna Plasters prepared by Grosvenor & Richards, Boston ; Mitchell Novelty Plaster Works ; Seabury & Johnson, New York and London. I have examined these varieties for the purpose of determining which possesses the largest quantity of Atropine. I employed equal surfaces of each, and *my analysis demonstrated that* SEABURY & JOHNSON'S *contains the greatest proportion* of the active principle of Belladonna. "R. OGDEN DOREMUS, M.D., L.L.D."

Belladonna Plaster, prepared by Seabury & Johnson, is packed in elegant tin cases, which contain 1 yard each, and can be obtained of almost any druggist throughout the United States and Canada, or will be furnished direct by mail. Samples sent on application.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

DETROIT MEDICAL COLLEGE.

(MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.)

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The **Recitation Session** begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

1165-1190

ANIMAL

VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... **.25**
Five Whole Quills (sufficient for ten vaccinations).....**$1.00**

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address,

D. G. BRINTON, M. D.,

115 South 7th Street,

PHILADELPHIA,

1183- GENERAL AGENT.

UNIVERSITY OF VERMONT.

MEDICAL DEPARTMENT, BURLINGTON, Vt.

TWENTY-SEVENTH SESSION, 1880.

FACULTY OF MEDICINE.

MATTHEW HENRY BUCKHAM, A.M., D.D., Burlington, Vt., President.

SAMUEL WHITE THAYER, M.D. L.L.D., Burlington, Vt., Emeritus Professor of General and Special Anatomy. Consulting Surgeon to Mary Fletcher Hospital.

WALTER CARPENTER, M.D., Burlington, Vt., Professor of the Theory and Practice of Medicine. Consulting Physician to Mary Fletcher Hospital.

JOHN ORDRONAUX, M.D., L.L.D., New York City, Emeritus Professor of Medical Jurisprudence.

A. F. A. KING, M.D., Washington, D. C., Professor of Obstetrics and the Diseases of Women. Consulting Physician to Mary Fletcher Hospital.

WILLIAM DARLING, A.M., M.D., F.R.C.S., LL.D., New York City, Professor of General and Special Anatomy.

HENRY D. HOLTON, A.M., M.D., Brattleboro, Vt., Professor of Materia Medica and General Pathology. Consulting Surgeon to Mary Fletcher Hospital.

JAMES L. LITTLE, M.D., New York City, Professor of the Principles and Practice of Surgery. Consulting Surgeon to Mary Fletcher Hospital.

A. P. GRINNELL, M.D., Burlington, Vt., Professor of Physiology and Microscopic Anatomy. Attending Physician to Mary Fletcher Hospital.

RUDOLPH A. WITTHAUS, M.D., New York City, Professor of Chemistry and Toxicology.

PROFESSORS FOR SPECIAL SUBJECTS.

WILLIAM A. HAMMOND, M.D., Surgeon-General U. S. Army (Retired). New York City, Professor of the Diseases of the Mind and Nervous System.

ROBERT W. TAYLOR, M.D., New York City, Professor of Diseases of the Skin.

A. T. WOODWARD, M.D., Brandon, Vt., Professor of the Surgical Diseases of Women. Consulting Physician to Mary Fletcher Hospital.

D. B. ST. JOHN ROOSA, M.D., New York City, Professor of the Diseases of the Eye and Ear.

STEPHEN M. ROBERTS, M.D., New York City, Professor of Diseases of Children.

GEORGE M. GARLAND, M.D., Boston, Mass., Professor of Thoracic Diseases.

LEROY M. BINGHAM, M.D., Burlington, Vt., Demonstrator of Anatomy. Attending Physician to Mary Fletcher Hospital.

CLINTON WAGNER, M.D., New York City, Professor of Diseases of the Throat.

HOSPITAL ADVANTAGE.—The Mary Fletcher Hospital, with its commodious amphitheatre, is open for clinical instruction during this session. The Medical and Surgical Clinics of the College will be held in the amphitheatre attached to the Hospital. In addition to these regular clinics of the College, instructions will be given at the bedside by the Professors of the Medical Department of the University.

LECTURES ON SPECIAL SUBJECTS.—These lectures, by gentlemen well-known as authorities recognized in their particular departments, will be delivered during the regular session.

CLINIQUES.—Besides these lectures, there will be Cliniques held as follows:—

SURGICAL CLINIQUE, by Professor Little, every Saturday, from 9 to 12, during the last half of the session.

MEDICAL CLINIQUE, by Professor Carpenter, on Wednesday morning, during first half of the term.

CLINIQUE FOR DISEASES OF NERVOUS SYSTEM, by Professor Hammond, during his course.

CLINIQUE FOR DISEASES OF EYE AND EAR, by Professor Roosa, during his course of lectures.

CLINIQUES FOR DISEASES OF SKIN, by Professor Taylor, during his course.

CLINIQUE FOR DISEASES OF CHILDREN, by Professor Roberts.

CLINIQUE FOR THORACIC DISEASES, by Professor Geo. M. Garland M.D.

CLINIQUE FOR DISEASES OF THROAT, by Professor Clinton Wagner.

THE PRELIMINARY TERM, consisting of a course of Lectures and Recitations in the various branches of Medicine and Surgery, will begin on the first Thursday of Nov., 1879, and continue until March 1st, 1880. FEE, $30.

THE REGULAR WINTER SESSION will commence on the first Thursday of March, 1880, and continue sixteen weeks. This course will consist of from five to six lectures daily, in the various departments of Medicine and Surgery.

FEES FOR THE REGULAR SESSION.

MATRICULATION FEE, PAYABLE EACH TERM	$ 5 00
FEES FOR THE FULL COURSE OF LECTURES by all the Professors	70 00
GRADUATION FEE	25 00

Material for dissection will be furnished at cost. The tickets are to be taken out at the beginning of the session.

Students who have already attended two full courses of lectures in other regular schools, are admitted on paying the matriculation fee and $25. Students who have attended two full courses in this College, or who have attended one full course in some regularly established medical school, and one full course in this College, are admitted to a third course of lectures on paying the matriculation fee only. GRADUATES of this school are admitted without fee. GRADUATES of other regular schools and *Theological Students* are admitted on general ticket, by paying the matriculation fee. Good board can be obtained at reasonable rates.

For further particulars and Circular, apply to the Secretary,

1181-1206eow **Prof. A. P. GRINNELL, M.D., Burlington, Vt.**

COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

Prepared by J. F. HAYES,

Chemist,

ST. GEORGE PHARMACY, BROAD & WALNUT.

1177–1189

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,

Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.

2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.

3. Their division is rapidly effected, and with great convenience.

4. Their invariability in strength renders them capable of being prescribed with precision.

5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

NOW READY!

"A work of universal interest to the medical profession, and indispensable to the student of our country's history."

A Biographical Dictionary of Contemporary American Physicians and Surgeons.

Edited by WM. B. ATKINSON, M.D.,

Permanent Secretary of the American Medical Association, and of the Pennsylvania State Medical Society; Lecturer on Diseases of Children at the Jefferson Medical College, etc.

One volume, royal octavo, double columns, 780 pages, on fine, tinted, super-calendered paper. Price: In extra cloth, beveled edges, $5.00; in full leather, $6.00.

☞ The work will be sent by mail, postage prepaid, on receipt of the price by the publisher.

This really monumental work, the fruit of enormous labor and outlay, contains the biographical sketches of more than twenty-eight hundred contemporary regular physicians of the United States, prepared from materials in most instances furnished by themselves, and hence entirely trustworthy. Indexes of names and places are appended. The effort has been made to embrace all who have visibly contributed to the advancement of medical science in all parts of the Union, and the volume presents a mass of most valuable historical, biographical and scientific material. It ranks with the collections of American medical biographies prepared by the venerable Dr. James Thacher, in 1828, and by Dr. S. L. Williams (edited by Prof. S. D. Gross, M.D.), in 1845; and as preserving innumerable facts not elsewhere recorded, it will surely have a permanent historical value for generations to come.

As it embraces not only the strictly professional aspect of the subjects selected, but also gives the facts of their political, personal and social history, its interest is not limited to medical men, but extends to all the intelligent reading classes of the community. It is a work which should be in every general library, in every collection of works of reference, and in every private library which aims to be at all complete in regard to the issues of the day in this country.

Every physician and medical student should have it, so that he may familiarize himself with the distinguished names in his own profession, and be able to judge of the legitimate claims of each; every editor should have it, in order to cull from it the facts he needs in order to write of medical men as they rise in prominence or pass to their graves; every statesman and historical student should have it, for the innumerable facts it presents of eminent men, and the light it throws on contemporary history; every intelligent general reader will find in its pages matters personal, genealogical, biographical and historical, sure to interest him in many relations.

The work is published at an unusually low price for its size and the quality of its manufacture, in the belief that it is one which deserves, and will achieve, popularity among readers of many different classes.

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

An Audacious Attempt at Deception

Has been practiced on the Medical Profession by the writers of an advertisement "About the Bitter Waters of Friedrichshall," which has recently appeared. To the advertisement has been appended a FALSE TRANSLATION of a certificate given by Professor VIRCHOW to the proprietors of the Friedrichshall Spring, by which it would appear that Professor VIRCHOW stated that the Friedrichshall Water was, "under all circumstances, the most preferable and absolutely the best;" whereas the proper translation of the original, which has thus impudently been falsified, is: "I quite willingly affirm that it was far from me to recommend any other similar water as that which is to be preferred under all circumstances, and as absolutely the best." The water referred to by Professor Virchow is the Hunyadi Janos Bitter Water, in favor of which he has given a strong expression of approval. It is further pretended that to this fabricated statement the concurrence is given of other eminent Medical men. The Sole Exporters of the Hunyadi Janos Bitter Water deem it necessary to expose this attempt to mislead medical opinion by the falsification of important documents.

THE APPOLLINARIS COMPANY (Limited),
SOLE EXPORTERS,
LONDON, ENGLAND.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly, SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain)*,	- - - - - - -	$1.00

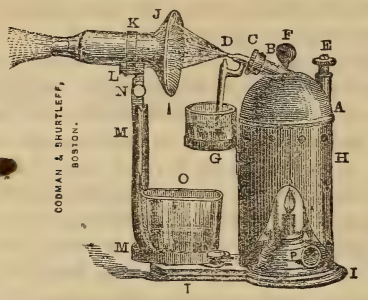
CODMAN & SHURTLEFF'S

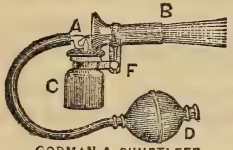
ATOMIZING APPARATUS.

PRICES REDUCED.

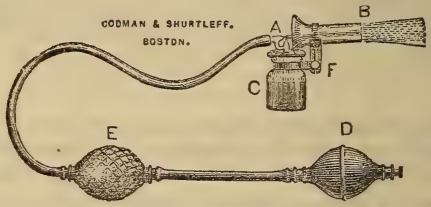


THE COMPLETE STEAM ATOMIZER. (Patented March 24, 1868.)

All its joints are hard-soldered.
Every one is tested by hydrostatic pressure, to more than one hundred pounds to the square inch.
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.
It does not throw spirts of hot water, is convenient, durable, portable, compact, and cheap, in the best sense of the word. Price $5.00. Postage 59c.
Brass parts, nickel-plated, additional, $2.00.
Neatly made, strong Black Walnut Box, with convenient Handle, additional, $2.50. Postage 44c.



THE BOSTON ATOMIZER. (Patented.)



SHURTLEFF'S ATOMIZING APPARATUS. (Patented.)

The most desirable Hand Apparatus. Rubber warranted of the very best quality. Valves imperishable, every one carefully fitted, and will work perfectly in all positions. Price $3.50.
The Bulbs are adapted to all the Atomizing Tubes made by us.
Each of the above Apparatus is supplied with two carefully made annealed glass Atomizing Tubes, and accompanied with directions for use. Each Apparatus is carefully packed for transportation, and warranted perfect.

The Antiseptic Atomizer		*$15.00, $25.00, $45.00, and $50.00*
Atomizer by Compressed Air, with Regulating Self-acting Cut-off		*45.00*
Dr. Oliver's Atomizer		*4.00*
Dr. Clarke's Atomizer	*(Postage 20)*	*3.00*

A MANUAL OF

EXAMINATION OF THE EYES.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

BY DR. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America. We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day. This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and relations of the optic nerve and its sheaths. I believe that it is unique; at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime importance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

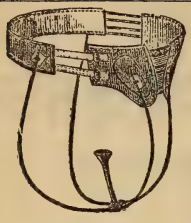
"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

PUBLISHED AND FOR SALE BY

D. G. BRINTON,

No. 115 South Seventh Street, Philadelphia.



DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

A New Pharmaceutical Preparation.

DRY EXTRACT OF MALT.

Warranted free from any adulteration whatever; made with the utmost care, from selected Canada Barley Malt. It possesses the following advantages over the liquid extracts of malt—

Dry Extract of Malt
Dry Extract of Malt
Dry Extract of Malt

Will not change or ferment in hot weather.
Will not get mouldy.
Is a more convenient and elegant preparation.
Has not the appearance of molasses.
Will make an emulsion with cod-liver oil.
Will instantly dissolve in hot water or milk.
Can be used for children and invalids in place of cane sugar.
Is only half the price of liquid extracts of malt.

Barley Water may be made by dissolving one teaspoonful in half a pint of water.

PRICE—18-oz. BOTTLE, $1.00. 8-oz. BOTTLE, 50 CTS.

In prescribing, specify HORLICK'S MALT.

Horlick's Food, for Infants and Invalids.

ENTIRELY SOLUBLE, NOT FARINACEOUS, requires NO BOILING or STRAINING; when dissolved in hot water and milk, makes the genuine Liebig's soup. We refer, by permission, to the following eminent medical men, who have used it extensively in their practice:—Professors I. LEWIS SMITH, DE LASKIE MILLER, WM. H. BYFORD, I. ADAMS ALLEN, I. P. OLIVER, C. P. PUTNAM, A. J. GAWNE, H. O. MARCY, etc., etc.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Horlick's Food, for Adults.

A pure, dry extract of malted wheat, barley and oats.

The superiority of this preparation over the liquid extracts made from these cereals, and now so extensively advertised, will be readily seen, as it does **not ferment,** and is entirely soluble in milk or water, making a highly nutritious article of diet, in a convenient and portable form, that will readily be borne by the weakest stomach.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Manufact'd by J. & W. HORLICK & CO., Racine, Wis.

Wholesale and Retail Agent,
J. F. HAYES,
St. George Pharmacy, Philadelphia.

London Agent,
F. NEWBERRY & SONS,
37 Newgate Street, London E., Eng.

Sold by Druggists everywhere.

An eight-ounce bottle of either or all of the above preparations sent FREE to physicians, on application.

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M. D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

SAMUEL R. PERCY, M. D.,
Professor Materia Medica, New York Medical College.

F. LE ROY SATTERLEE, M. D., PH. D.
Professor of Chemistry, Materia Medica and Therapeutics, in the New York College of Dentistry; Professor of Chemistry and Hygiene in the American Veterinary College, etc., etc.

A. VAN DEVEER, M.D., ALBANY, N. Y.,
Prof. of the Prin. and Prac. of Surg., Albany Med. College; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good, thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JULIUS F. MINER, M.D.,
Prof. Special Surgery, University of Buffalo, N. Y.
"I have used LACTOPEPTINE in private practice for the past two years, in many cases with highly satisfactory results."

JOHN H. PACKARD, M.D., PHILADELPHIA, PA.,
Pres't Phila. Co. Obstet. Society; Surgeon Episcopal and Woman's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

D. HAYES AGNEW, M.D., LL D.,
Prof. of Surgery, University of Pennsylvania, Phila., Pa.
"I have found decided benefit follow the use of LACTOPEPTINE in certain forms of Dyspepsia."

JAS. AITKEN MEIGS, M.D., PHILADELPHIA, PA.,
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phys. to Penna. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D., CINCINNATI, O.,
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D., WASHINGTON, D. C.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE, both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D., LOUISVILLE, KY.,
Prof. of the Science and Art of Surg. and Clinical Surgery, University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

L. P. YANDELL, M.D.,
Prof. of Clinical Medicine, Diseases of Children, and Dermatology, University of Louisville, Ky.
"LACTOPEPTINE is an exceedingly valuable preparation, and no one who gives it a fair trial can fail to be impressed with its usefulness in Dyspepsia."

ROBERT BATTEY, M.D., ROME, GA.,
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it.

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion."

PRICE LIST.

LACTOPEPTINE (in oz. bottles).....per oz.	$1.00
" (" ").....per doz.	10.00
" (in ½ lb ").....per lb.	12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

CLOTH CASES FOR BINDING THE REPORTER, can be had at this office. Price 25 cts. each, by mail. Each case is neatly lettered, and fits one volume. tf.

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

DR. L. D. McINTOSH'S

Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

DETROIT MEDICAL COLLEGE.

(MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.)

SESSIONS OF 1879-'80.

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory*, *clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

ANIMAL

VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... **.25**
Five Whole Quills (sufficient for ten vaccinations).....**$1.00**

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address,

D. G. BRINTON, M.D.,

115 South 7th Street,

PHILADELPHIA,

1183- GENERAL AGENT.

HINTS IN THE OBSTETRIC PROCEDURE.

By WILLIAM B. ATKINSON, A.M., M.D.,

Lecturer on Diseases of Children, at the Jefferson Medical College. Physician to the Department of Obstetrics and Diseases of Children, Howard Hospital, Philadelphia.

SECOND EDITION. ENTIRELY RE-WRITTEN AND ENLARGED.

12mo, CLOTH. PRICE, $1.00.

NOTICES OF THE SECOND EDITION.

"The charmingly informal style of the author renders the reading of the monograph a positive pleasure. Conscientiously we feel that we are working in the interests of both physician and patient when we say to all who do not own it now, order at once a copy of these *Hints* for your own use."—*The Detroit Lancet*, July, 1879.

"The author, a teacher of experience, treats his subject in a way to make it especially useful to the student, but not to the student alone."—*The Richmond and Louisville Medical Journal*, June, 1879.

"Dr. Atkinson fully appreciates the vast importance of the obstetric art in both its immediate and remote effects on mothers and children, as well as the reputation of the physician, and, in this interesting little work, gives valuable hints, which are intended to guide us in the management of women before, during, and after the termination of labor."—*Canada Journal of Medical Science*, July, 1879.

"The many valuable points cited, the practical manner in which they are stated, together with the sound views of practice enunciated, make this little monograph truly valuable."—*The Southern Practitioner*, January, 1879.

"It is the gist of the obstetric art in convenient form, and will serve to refresh the practitioner's mind in any case pertaining thereto."—*Maryland Medical Journal*, June, 1879.

"The young man without obstetric experience . . . and likewise certain practitioners who have had no inconsiderable experience and been years in gaining it, but who have not kept abreast with advancing thought and polemic literature in obstetric channels, will find themselves refreshed and enlightened by a persual of Dr. Atkinson's Hints."—*The American Practitioner*, August, 1879.

"We take pleasure, however, in commending the book to the profession, with the belief that the useful knowledge it contains will more than compensate any one for reading it."—*The Medical Herald*, July, 1879.

"This little book is just of the size to put in one's pocket when he goes out to attend a confinement case, and it is just of the kind that he will find to be useful and agreeable reading while waiting for the *denouément*. It will refresh his mind and prepare him to meet accidents which may occur."—*Michigan Medical News*, July, 1879.

COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

Prepared by J. F. HAYES,

Chemist,

ST. GEORGE PHARMACY, BROAD & WALNUT.

1177-1189

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,

Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.

2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.

3. Their division is rapidly effected, and with great convenience.

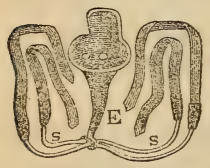
4. Their invariability in strength renders them capable of being prescribed with precision.

5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

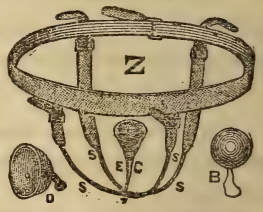
WHEELER CHEMICAL WORKS,

1172-1197 *Office, 87 Clark Street, Chicago.*

STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



Stem Uterine Supporters.—There are three variti s. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position properly, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. ***Self Sustaining.***—That a globular pessary has a tendency to be well retained and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. ***Cup D.***—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price List and Abdominal Supporting Belts and Internal Supporters combined, &c., see *Catalogue*. The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.



$1.50 $1.50

1150-1201

NOW READY!

"A work of universal interest to the medical profession, and indispensable to the student of our country's history."

A Biographical Dictionary of Contemporary American Physicians and Surgeons.

Edited by WM. B. ATKINSON, M.D.,

Permanent Secretary of the American Medical Association, and of the Pennsylvania State Medical Society; Lecturer on Diseases of Children at the Jefferson Medical College, etc.

One volume, royal octavo, double columns, 780 pages, on fine, tinted, supercalendered paper. Price: In extra cloth, beveled edges, $5.00; in full leather, $6.00.

☞ The work will be sent by mail, postage prepaid, on receipt of the price by the publisher.

This really monumental work, the fruit of enormous labor and outlay, contains the biographical sketches of more than twenty-eight hundred contemporary regular physicians of the United States, prepared from materials in most instances furnished by themselves, and hence entirely trustworthy. Indexes of names and places are appended. The effort has been made to embrace all who have visibly contributed to the advancement of medical science in all parts of the Union, and the volume presents a mass of most valuable historical, biographical and scientific material. It ranks with the collections of American medical biographies prepared by the venerable Dr. James Thacher, in 1828, and by Dr. S. L. Williams (edited by Prof. S. D. Gross, M.D.), in 1845; and as preserving innumerable facts not elsewhere recorded, it will surely have a permanent historical value for generations to come.

As it embraces not only the strictly professional aspect of the subjects selected, but also gives the facts of their political, personal and social history, its interest is not limited to medical men, but extends to all the intelligent reading classes of the community. It is a work which should be in every general library, in every collection of works of reference, and in every private library which aims to be at all complete in regard to the issues of the day in this country.

Every physician and medical student should have it, so that he may familiarize himself with the distinguished names in his own profession, and be able to judge of the legitimate claims of each; every editor should have it, in order to cull from it the facts he needs in order to write of medical men as they rise in prominence or pass to their graves; every statesman and historical student should have it, for the innumerable facts it presents of eminent men, and the light it throws on contemporary history; every intelligent general reader will find in its pages matters personal, genealogical, biographical and historical, sure to interest him in many relations.

The work is published at an unusually low price for its size and the quality of its manufacture, in the belief that it is one which deserves, and will achieve, popularity among readers of many different classes.

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in eve y respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS Oval Shape. Complete Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

FOOD IS THE BEST TONIC!!

MENSMAN'S

PEPTONIZED

BEEF TONIC.

The great necessity for a fluid food that would possess *all the elements necessary for the support of the system,* having been long felt by the medical profession, we call attention to this preparation, containing the entire nutritious properties of the muscular fibre, blood, bone, and brain of a healthy bullock, dissolved and semi-digested by aid of heat and pepsin, and preserved by spirit; thus constituting a most perfect nutritive, reconstructive tonic.

It is not a mere stimulant, like the now fashionable extracts of beef, but contains blood-making, force-generating, and life-sustaining properties, pre-eminently calculated to support the system under the exhausting and wasting process of fevers and other acute diseases, and to rebuild and recruit the tissues and forces, whether lost in the destructive march of such affections, or induced by overwork, general debility, or the more tedious forms of chronic disease.

It is friendly and helpful to the most delicate stomach, and where there is a fair remnant to build on, will reconstruct the most shattered and enfeebled constitution. It is entirely free from any drugs.

It is prepared after a thoroughly tested and scientific method.

PROPRIETORS,

CASWELL, HAZARD & CO.,

Druggists and Chemists,

FIFTH AVE., COR. 24th ST., and SIXTH AVE., COR. 39th ST., NEW YORK.

An Audacious Attempt at Deception

Has been practiced on the Medical Profession by the writers of an advertisement "About the Bitter Waters of Friedrichshall," which has recently appeared. To the advertisement has been appended a FALSE TRANSLATION of a certificate given by Professor VIRCHOW to the proprietors of the Friedrichshall Spring, by which it would appear that Professor VIRCHOW stated that the Friedrichshall Water was, "under all circumstances, the most preferable and absolutely the best;" whereas the proper translation of the original, which has thus impudently been falsified, is: "I quite willingly affirm that it was far from me to recommend any other similar water as that which is to be preferred under all circumstances, and as absolutely the best." The water referred to by Professor Virchow is the Hunyadi Janos Bitter Water, in favor of which he has given a strong expression of approval. It is further pretended that to this fabricated statement the concurrence is given of other eminent Medical men. The Sole Exporters of the Hunyadi Janos Bitter Water deem it necessary to expose this attempt to mislead medical opinion by the falsification of important documents.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anæmia*, *Chlorosis*, *Cachexias*, *Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away*.

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus**, which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue**, and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

In corresponding with Advertisers please mention THE MEDICAL AND SURGICAL REPORTER.

PNEUMATIC ASPIRATION,

AFTER THE MANNER OF DIEULAFOY.

"It is always possible, owing to Aspiration, to search for a fluid collection without any danger, whatever may be its seat or its nature."

"I have thrust these needles into almost every part of the body; into the Joints the Liver, the Spleen, the Bladder, the Intestines, the Lungs and the Meninges; and I can affirm, and a great number of observers affirm with me, that we have never seen consecutive accidents."—*Dieulafoy on Pneumatic Aspiration*, pp. 21, 24.

We invite the attention of the Medical Profession to this New Apparatus for Aspiration, constructed upon the general plan of Potain's modification of Dieulafoy's Aspirator, but containing the following improvements and inventions of our own:—

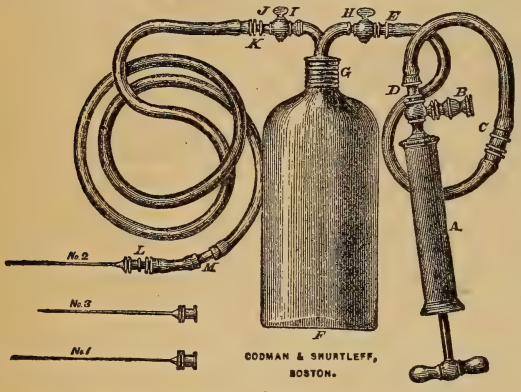

Fig. 68.

Fig. 77.

Fig. 78.

The Stopper and Cocks supplied with Apparatus No. 2.

1st. Means of changing the pump from an exhaust to a force-pump, and *vice versa*, thereby enabling the operator not only to draw an abnormal fluid, but to inject the cavity through the tubes and needle of the apparatus with one adapted to induce healthy action.—*See Dieulafoy on Aspiration*, pp. 276, 278.

2d. The employment, in our apparatus No. 1, of a metal Screw Cap, fitting the neck of the receiver supplied with this apparatus so securely that it cannot be forced from its place by condensed air while injecting, or accidentally removed while the receiver is in a state of vacuum for aspiration

3d. The substitution, for the ordinary oiled silk valves of other apparatus, of a kind indestructible, both in form and material.

4th. A simple and comparatively inexpensive attachment for evacuating the contents of the stomach, equal, if not superior, to any in use hitherto.

Commendations bestowed upon our Aspirators, by physicians familiar with the latest European and American ones, lead us to believe that, in some important particulars, at least, they are superior to any.

In his work on Pneumatic Aspiration, Dieulafoy shows the harmlessness of the Aspiratory puncture, and its great superiority to the Exploring Trocar as a means of accurate diagnosis in all collections of Pathological Fluids. It has been used with unprecedented success in the Retention of Urine, Reduction of Strangulated Hernia, in Ascites, Hydrothorax, Empyema, Pneumothorax, Effusions into the Pericardium, Serous, Purulent and Hematic Effusions of the Knee, Hydrocele, Hydatid Cysts, Abscesses of the Liver, and in various other Pathological Lesions.

PRICES OF APPARATUS.

No. 1. Air Pump—exhaust or condensing as described; 16 oz. receiver, of strong glass, with screw-cap; three steel, gold plated Aspiratory Needles, together with the necessary tubes, stop-cocks, etc., as shown in Fig. 77, fitted in a neat case, accompanied with printed directions $16.00. Postage 64 cents.

No. 2. The same, without receiver, and with rubber stopper (see Fig. 78) to fit almost any bottle of quart capacity, or less, instead of screw-cap arrangement, also with printed directions $14.00. Postage 32 cents.

No. 3. Dieulafoy's Notched Aspirator. Nickel-plated, with two Needles, Tubes, etc., in case $11 00

No. 4. Stomach Attachment, as described, adapted to pump accompanying Nos. 1 and 2, additional $6.00. Postage 22 cents.

The foregoing are the product of our own factory, and are warranted in every respect.

Also, **Dieulafoy on Pneumatic Aspiration,** post paid, by mail, on receipt of..... 3 40

☞ *Full description on application.*

An illustrated Catalogue of Surgical Instruments, also a New Pamphlet on Atomization of Liquids, with description of Improved Apparatus and Formulæ of Remedies successfully employed, will be forwarded, postpaid, on application.

A MANUAL OF

EXAMINATION OF THE EYES.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

BY DR. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America. We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day. This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and r lations of the optic nerve and its sheaths. I believe that it is unique; at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime importance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

[Unguentum Petrolei]

SAMPLES FURNISHED ON APPLICATION.

THE POST-OFFICE LAWS

Forbid anything of an oleaginous nature being sent through the mail.

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

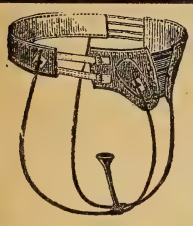
From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

PREPARED BY

E. F. HOUGHTON & CO.,

1109-eow-tf 211 S. FRONT STREET, PHILADELPHIA.



DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,
192 JACKSON STREET, CHICAGO, ILL.

Our valuable pamphlet "Some Practical Facts about Displacements of the Womb," will be sent you free on application.

A New Pharmaceutical Preparation.

DRY EXTRACT OF MALT.

Warranted free from any adulteration whatever; made with the utmost care, from selected Canada Barley Malt. It possesses the following advantages over the liquid extracts of malt—

Dry Extract of Malt
Dry Extract of Malt
Dry Extract of Malt

- Will not change or ferment in hot weather.
- Will not get mouldy.
- Is a more convenient and elegant preparation.
- Has not the appearance of molasses.
- Will make an emulsion with cod-liver oil.
- Will instantly dissolve in hot water or milk.
- Can be used for children and invalids in place of cane sugar.
- Is only half the price of liquid extracts of malt.

Barley Water may be made by dissolving one teaspoonful in half a pint of water.

PRICE—18-oz. BOTTLE, $1.00. 8-oz. BOTTLE, 50 CTS.

In prescribing, specify HORLICK'S MALT.

Horlick's Food, for Infants and Invalids.

ENTIRELY SOLUBLE, NOT FARINACEOUS, requires NO BOILING or STRAINING; when dissolved in hot water and milk, makes the genuine Liebig's soup. We refer, by permission, to the following eminent medical men, who have used it extensively in their practice:—Professors I. LEWIS SMITH, DE LASKIE MILLER, WM. H. BYFORD, I. ADAMS ALLEN, I. P. OLIVER, C. P. PUTNAM, A. J. GAWNE, H. O. MARCY, etc., etc.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Horlick's Food, for Adults.

A pure, dry extract of malted wheat, barley and oats.

The superiority of this preparation over the liquid extracts made from these cereals, and now so extensively advertised, will be readily seen, as it does **not ferment**, and is entirely soluble in milk or water, making a highly nutritious article of diet, in a convenient and portable form, that will readily be borne by the weakest stomach.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Manufact'd by J. & W. HORLICK & CO., Racine, Wis.

Wholesale and Retail Agent,
J. F. HAYES,
St. George Pharmacy, Philadelphia.

London Agent,
F. NEWBERRY & SONS,
37 Newgate Street, London E., Eng.

Sold by Druggists everywhere.

An eight-ounce bottle of either or all of the above preparations sent FREE to physicians, on application.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. 1868. 1872. 1873, VIENNA.

Prize Medal. Silver Medal. Gold Medal. Medal of Merit.

BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of

Blancard

Pharmacien, No. 40 Rue Benaparte, Paris.

without which none are genuine.

HOSPITAL ADVANTAGE.—The Mary Fletcher Hospital, with its commodious amphitheatre, is open for clinical instruction during this session. The Medical and Surgical Clinics of the College will be held in the amphitheatre attached to the Hospital. In addition to these regular clinics of the College, instructions will be given at the bedside by the Professors of the Medical Department of the University.

LECTURES ON SPECIAL SUBJECTS.—These lectures, by gentlemen well-known as authorities recognized in their particular departments, will be delivered during the regular session.

CLINIQUES.—Besides these lectures, there will be Cliniques held as follows:—

SURGICAL CLINIQUE, by Professor Little, every Saturday, from 9 to 12, during the last half of the session.

MEDICAL CLINIQUE, by Professor Carpenter, on Wednesday morning, during first half of the term.

CLINIQUE FOR DISEASES OF NERVOUS SYSTEM, by Professor Hammond, during his course.

CLINIQUE FOR DISEASES OF EYE AND EAR, by Professor Roosa, during his course of lectures.

CLINIQUES FOR DISEASES OF SKIN, by Professor Taylor, during his course.

CLINIQUE FOR DISEASES OF CHILDREN, by Professor Roberts.

CLINIQUE FOR THORACIC DISEASES, by Professor Geo. M. Garland M.D.

CLINIQUE FOR DISEASES OF THROAT, by Professor Clinton Wagner.

THE PRELIMINARY TERM, consisting of a course of Lectures and Recitations in the various branches of Medicine and Surgery, will begin on the first Thursday of Nov., 1879, and continue until March 1st, 1880. FEE, $30.

THE REGULAR WINTER SESSION will commence on the first Thursday of March, 1880, and continue sixteen weeks. This course will consist of from five to six lectures daily, in the various departments of Medicine and Surgery.

FEES FOR THE REGULAR SESSION.

MATRICULATION FEE, PAYABLE EACH TERM.....$ 5 00
FEES FOR THE FULL COURSE OF LECTURES by all the Professors.. 70 00
GRADUATION FEE..... 25 00

Material for dissection will be furnished at cost. The tickets are to be taken out at the beginning of the session.

Students who have already attended two full courses of lectures in other regular schools, are admitted on paying the matriculation fee and $25. Students who have attended two full courses in this College, or who have attended one full course in some regularly established medical school, and one full course in this College, are admitted to a third course of lectures on paying the matriculation fee only. GRADUATES of this school are admitted without fee. GRADUATES of other regular schools and *Theological Students* are admitted on general ticket, by paying the matriculation fee. Good board can be obtained at reasonable rates.

For further particulars and Circular, apply to the Secretary,

1181–1206eow **Prof. A. P. GRINNELL, M.D., Burlington, Vt.**

WOMAN'S HOSPITAL MEDICAL COLLEGE

337 and 339 S. Lincoln St., Chicago.

The *Tenth Annual Course of Lectures* will commence the first Tuesday in October. 1879, and continue twenty-one weeks. The Spring Term will commence April 1st, and continue twelve weeks. College building new. Clinical and Dissecting advantages unsurpassed.

FACULTY.—William H. Byford, A.M., M.D., President, Obstetrics; T. Davis Fitch, M.D., Gynecology; Chas. Warrington Earle, M.D., Treasurer, Diseases of Children; Isaac N. Danforth, M.D., Pathology; John E. Owens, M.D., Surgery; Henry M. Lyman, A.M., M.D., Practice of Medicine, Daniel R. Brower, M.D., Secretary, Nervous and Mental Diseases; Sarah Hackett Stevenson, M.D., Corresponding Secretary, Physiology; David W. Graham, A.M., M.D., Anatomy; Plymouth S. Hayes, M.D., Chemistry; Wm. J. Maynard, A.M., M.D., Therapeutics and Dermatalogy; Wm. T. Montgomery, M.D., Eye and Ear; E. Fletcher Ingals, M.D., Diseases of Chest and Throat; John O. Hobbs, M.D., Demonstrator.

For information or announcement, address either of the Secretaries, at 125 State Street.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

CLOTH CASES FOR BINDING THE REPORTER, can be had at this office. Price 25 cts. each. by mail. Each case is neatly lettered, and fits one volume. tf.

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

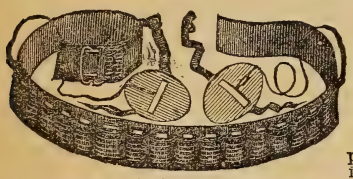
ARTIFICIAL EYES.

The finest, best, and most natural Artificial Eyes in the world, inserted and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Sixth St., Philadelphia, General Agent for the United States of L. Mueller's Celebrated German Artificial Eyes, which received the Gold Medal at Berlin, Vienna, Philadelphia (1876), etc. 1142-tf



DR. L. D. McINTOSH'S

Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The Recitation Session begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

1165-1190

DIFFERENTIAL DIAGNOSIS;

A MANUAL OF THE

COMPARATIVE SEMEIOLOGY

OF THE MORE IMPORTANT DISEASES,

BY F. DE HAVILLAND HALL, M. D.,

Assistant Physician to the Westminster Hospital, London.

American Edition, with Extensive Additions.

One Volume, 8vo., pp. 205. Printed on handsome tinted paper; bound in English pebbled cloth, with beveled boards. Price $2.00.

SENT BY MAIL, POST-PAID, ON RECEIPT OF THE PRICE.

DR. HALL'S work has received the highest encomiums from the English medical press, for its lucid arrangement, completeness, and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher. His work has been considerably enlarged in this edition, the editor having devoted especial attention to (1) pointing out the *early* and often overlooked symptoms of disease (2), enumerating the *pathognomonic* symptoms, and (3) bringing into relief the *peculiar features* of diseases in this country.

Most of the diseases which may be confounded are presented in comparative tables, setting forth their distinctive characteristics in the clearest possible light, and thus greatly facilitating their prompt diagnosis.

THE CONTENTS follow, in a general way, the nomenclature of the College of Physicians · thus the work is divided into two parts, the one on General Diseases, the other on Local Diseases.

The First Part contains, among other matters—

The Symptoms of the Febrile State Defined. Comparative Table of the Temperature and Pulse in the Leading Febrile Diseases. Differences between Symptomatic and Essential Fever. Tabular Comparison of Rötheln, Scarlet Fever, Measles, and Smallpox. Comparison of the Symptoms of Typhoid and Typhus; of Typhoid and Malarial Fever; of Typhoid and Typho-Malarial; of Typhoid Fever and the Typhoid State; of Typhoid and Relapsing Fever. Diagnosis between Epidemic and Sporadic Cerebro-spinal Meningitis; between Epidemic Meningitis and Typhus; between the Same and Congestive Malarial Fever. The Signs of the Arthritic, the Scrofulous, the Syphilitic, and the Tubercular Dyscrasiæ. Gout, Rheumatism, and their Allies.

The Second Part includes the Diagnosis of Local Diseases; embracing, for example—

The Differential Points between Hemorrhage, Thrombosis, and Embolism in the Brain; between the various forms of Sclerosis, Syphilosis, Paralysis, and Ataxy of the Spinal Cord; and between Organic, Functional, Toxic, and Hysterical Paralyses. These extremely difficult problems in diagnosis are set forth with the utmost clearness.

Neuralgia and its Counterfeits (myalgia, spinal irritation, cerebral abscess, alcoholism, hysteria, etc.)

Diagnostic Table of Acute, Chronic, Syphilitic, and Tubercular Laryngitis, Perichondritis, Benign and Malignant Growths, and Neuroses of the Larynx. Distinctions between Inflammatory Croup and Spasmodic Croup, on the one hand, and Membranous Croup and Diphtheria, on the other. Catarrhal as Distinct from Parenchymatous Tonsillitis.

Normal and Abnormal Chest Sounds (in all, eleven very carefully prepared tables). Dr John Hughes Bennett's General Rules for Diagnosing Heart and Lung Affections. Comparison of the Three Forms of Phthisis. The Diagnosis of Incipient Phthisis (sixteen different signs are given of its very earliest stage). Differential Diagnoses between Incipient Phthisis and Bronchitis; between Acute Phthisis and Typhoid Fever; between Capillary Bronchitis and Pneumonia; between Pneumonia and Pleurisy; Pneumothorax and Pneumo-Hydrothorax, etc.

Dr. Dobell's Aphorisms on the Significance of Pain at and near the Heart; his Aphorisms on the Significance of Clubbing of the Finger Ends. Diagnosis between the Various Cardiac, Aortic, and Mitral Diseases. The Cheyne-Stokes Respiration Discussed.

To Distinguish Acidity of the Stomach from Fermentation and from Hypersecretion; Stomachal Vertigo from Cerebral Vertigo; Gastric Vomiting from Cerebral Vomiting. Comparative Symptoms of Atonic Dyspepsia, Chronic Gastritis, Gastric Ulcer, and Gastric Cancer. Special Points in the Diagnosis of Gastric Cancer. Abdominal Phthisis as Distinguished from Typhoid Fever. The Diagnosis of Hepatic Diseases. Hardy's Handy Tests for Bile in the Urine. What Pain in the Liver may Signify. What Jaundice may Signify. Hepatic Diseases Classified with Regard to the Size of the Liver. The Seven Forms of Bright's Disease Compared. The Four Forms of Diabetes Compared. The Kinds of Calculi and their Tests, etc.

The *British Medical Journal*, says:—"This is not of the type of books brought out by 'grinders.' The tables it contains are invaluable aids by the bedside, enabling the student and practitioner readily to compare signs met with in disease."

The *North Carolina Medical Journal*, says:—"The tabular method of comparing symptoms is well utilized. Very many valuable diagnostic formulæ are brought together."

The *Atlanta Medical Journal*, says:—"The comparative symptoms are given in a very satisfactory manner. The work will afford valuable aid to practitioners."

ANIMAL

VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... **.25**
Five Whole Quills (sufficient for ten vaccinations).....**$1.00**

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address

COMPRESSED
Coated Tablets.

I ask the attention of physicians to the above new and elegant form of preparing medicines.

The discovery and successful application of the process of compression to the coating of medicines with a thin envelope of chocolate, sugar, etc., thereby avoiding the application of heat and the employment of tenacious pill-mass excipients, marks a great advance in elegant pharmacy, and fully meets the requirements of a refined taste.

The process is available for nearly every medicine, including, besides those articles adapted to pill and powder form, several others, such as Chloral Hydrate, Iodide and Bromide of Potassium and Pepsin; while for Quinine and other bitter and nauseous remedies it is unsurpassed.

Owing to their small bulk, thinness and lenticular shape, they may be easily swallowed, and are readily taken even by children.

All officinal and standard unofficinal formulæ for pills, etc., are put up in this new form.

The prices will correspond as near as possible to the best made pills and granules in the market.

Chocolate coating is used regularly, unless the sugar is ordered.

Send for samples.

Prepared by J. F. HAYES,

Chemist,

ST. GEORGE PHARMACY, BROAD & WALNUT.
1177-1189

A NEW FORM OF MEDICATION,

COMBINING

Reliability and Accuracy for the Physician,
Convenience and Elegance for the Pharmacist.

Saccharated Extracts.

THE DRY, SOLUBLE, EXTRACTIVE MATTER OF THE DRUG IS TRITURATED WITH MILK SUGAR IN SUCH PROPORTION THAT ONE TROY OUNCE OF THESE EXTRACTS REPRESENTS ONE TROY OUNCE OF THE DRUG.

A Soluble Drug of Uniform Strength and Quality.

The **percentage of Dry Extract** is in all cases **indicated** on the label.

In the more **powerful remedies** the **percentage** of **alkaloid** is also indicated.

The advantages of the **Saccharated Extracts** over ordinary extracts are:—

1. They are stable at all temperatures and under all conditions; they will not swell, ferment, or waste.

2. They are always of a uniform and convenient consistency, not becoming solid, as is the case with ordinary powdered extracts.

3. Their division is rapidly effected, and with great convenience.

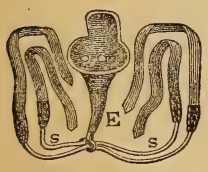
4. Their invariability in strength renders them capable of being prescribed with precision.

5. Their general application to any form of medication, as Capsules, Compressed Pills, Troches, etc.

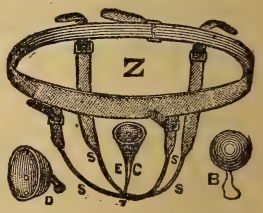
WHEELER CHEMICAL WORKS,

1172-1197 *Office, 87 Clark Street, Chicago.*

STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of Instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. ***Self Sustaining.***—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. ***Cup D.***—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see ***Catalogue.*** The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.



$1.50 $1.50

All the Instruments and Catalogue obtained through this Office.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bond fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established 12 years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a Companion Journal to the Medical and Surgical Reporter; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research develcped the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

RELIABLE

ANIMAL VACCINE.

The undersigned respectfully announces that he has discontinued the practice of furnishing Vaccine *at his residence.*

Physicians can obtain the *Animal Vaccine* of MESSRS. CASWELL, HAZARD & CO., BROADWAY, CORNER 24TH STREET.

FRANK P. FOSTER, M.D.

By our arrangement with Dr. Foster, *all* Vaccine supplied by *us* is *absolutely fresh.*

We can furnish it in any quantity desired, either by express or by mail, if remittance is made to cover postage.

Dr. Foster's Animal Vaccine is the only kind that may be said to have the unqualified endorsement of the Medical Profession of New York.

QUILL SLIPS (half quill, charged on convex surface, at square-cut end).....25 cts.
CAPILLARY TUBES.....$2 00

For ordinary use *Quill Slips* are the most reliable of all forms of stored Vaccine, and in cases of failure with them in *primary* vaccination, if used within one week of their issue, and strictly in accordance with the printed directions, *being in the meantime kept cool and dry*, a second supply will be furnished gratis.

Tubes are intended chiefly for transportation to long distances, as the virus is preserved for a considerable length of time. They are superior to crusts, but inferior to quill slips.

Crusts are not recommended, and are not sold, for the reason that, however fresh, and however well formed they may be, they are apt to prove inefficient.

CASWELL, HAZARD & CO., New York.

APOLLINARIS WATER.

HIGHLY EFFERVESCENT.

Approved by the Academy of Medicine of France, and its Sale in France as a Natural Mineral Water authorized by Special Decree of the French Government.

"The Exquisite Apollinaris."—Dr. J. Milner Fothergill. "Queen of Table Waters."—Lon. Med. Record.

APOLLINARIS WATER has been the subject of the most favorable reports from Professors Fordyce Barker, Ogden Doremus, Austin Flint, W. A. Hammond, Loomis, F. N. Otis, E. R. Peaslee, Sayre, Marion Sims, James R. Wood, New York, etc., etc.

APOLLINARIS	Used habitually as a table water, its pleasant taste and richness in pure carbonic acid favorably distinguish it from the other similar mineral waters.—Prof. Dr. VIRCHOW, *Member of the German Parliament, and Professor University of Berlin.*
APOLLINARIS	EXCEPTIONALLY VALUABLE and PLEASANT as a table-water in HYGIENIC as well as DIETETIC respects; maintains its FRESHNESS on the PALATE when constantly used.—Prof. Dr. OSCAR LIEBREICH, Berlin.
APOLLINARIS	I have for many years always obtained the best success with this water in cases of severe DISORDERS of the DIGESTION; in PHTHISIS, during CONVALESCENCE from severe Illnesses, after TYPHUS PNEUMONIA, ARTICULAR RHEUMATISM, and also in DIPHTHERIA, and in the various other diseases in which it was necessary to produce a TONIC EFFECT upon the STOMACH and the DIGESTION. I have of late almost EXCLUSIVELY EMPLOYED IT.—Prof. Dr. OERTEL, Munich, *Author of Treatise on Diphtheria, &c., Ziemssen's Cyclopædia.*
APOLLINARIS	REFRESHING, PROMOTES DIGESTION, and is especially to be recommended as an adjuvant in the following morbid conditions: DYSPEPSIA characterized by ACIDITY of the STOMACH, GASTRO-ENTERALGIA, tendency to GALL-STONES, GOUTY conditions, CATARRHAL affections of the GENITO-URINARY MUCOUS MEMBRANE, and UTERINE CONGESTION leading to CATAMENIAL HEMORRHAGE. The habit of drinking Apollinaris Water has SAVED many from TYPHOID Fever, while their COMPANIONS drinking COMMON WATER were INFECTED.—Dr. HERMANN WEBER, *Fellow of the Royal College of Physicians, London, &c., &c.*

Further Testimonials from numerous authorities, including Professors Frankland, F.R.S., Lond.; Odling, F.R.S., Oxford; A. W. Hoffmann, F.R.S., Privy Councillor, Berlin; Kekulé, Rector of University of Bonn; Professors Ditterich, Munich; Nussbaum, Munich; Varrentrapp, Frankfort; T. K. Chambers, Physician to the Prince of Wales; Peter Hood, M.D.; Peter Squire, F.L.S., Chemist to the Queen, and others; Professors Drs. Labbé, Fauvel, A. Latour, L. Championnière, Constantin James, Lutaud, &c., France, and many others, have been published and may be obtained on application to

F. DE BARY & CO., 41 & 43 Warren St., New York.

Apollinaris Water may be had of all Wine Merchants, Grocers, Druggists, and Mineral Water dealers throughout the United States.

SAVORY & MOORE beg to call the attention of the Profession to some of their Special Preparations, the purity and uniform strength of which are Guaranteed.

PANCREATIC EMULSION,

Prepared in accordance with the direction of the Physician who introduced this purely

MEDICINAL FOOD FOR CONSUMPTION AND WASTING DISEASES.

Pancreatic Emulsion will always take precedence of Cod-Liver Oil, by reason of its introducing the STABLE SOLID FATS INTO THE SYSTEM, instead of the evanescent fluid fats or oils.

Neither Cod-Liver Oil nor EMULSIONS of COD-LIVER OIL can supply the kind of fat necessary for sound and vigorous human life. In addition to this, all the Oily Emulsions are liable to rancidity, and most of them are highly objectionable in consequence of the SAPONIFICATION and ULTIMATE PUTREFACTION, produced by the chemical agents used instead of Pancreatic Juice.

Pancreatic Emulsion (properly so-called), is THE NECESSARY FOOD OF THE CONSUMPTIVE, and the most reliable form of nutriment for counteracting the tendency to Phthisis and other wasting diseases. It presents to the lacteals fat, in essentially the same condition for assimilation and absorption as in a vigorous human frame, and THE AGENT of the important change is THE NATURAL SECRETION of the PANCREAS.

Pancreatic Emulsion may therefore be regarded as Chyle obtained by nature's own process. In certain cases both Cod-Liver Oil and Pancreatic Emulsion are required—one to supply the blood with oil or liquid fat, the other with the more stable solid fats; but it cannot be too strongly urged that both PANCREATIC EMULSION and Cod-Liver Oil are *not to be regarded as Medicines, but as articles of diet*, without which patients, with their defect of health, will as surely starve as healthy persons would if deprived of the most nutritive part of their food.

Pancreatized (Digestive) Cod-Liver Oil. By Pancreatized Cod-Liver Oil, the active digestive principle of the Pancreatic Juice is imparted to it, which renders it in a highly favorable condition for rapid and complete digestion and assimilation, preventing nausea, and largely increasing the beneficial properties of the Oil.

Pancreatine effects the digestion and assimilation of Cod-Liver Oil and Fat, as well as Food generally. This palatable and popular remedy is therefore invaluable to PATIENTS WHO ARE UNABLE TO DIGEST COD-LIVER OIL, and who are thus deprived of its nourishing and invigorating properties.

Pancreatine Wine. An excellent vehicle for taking Cod-Liver Oil and promoting the digestion of it.

TROMMER'S EXTRACT OF MALT.

The rapidly increasing demand for our IMPROVED EXTRACT OF MALT, during the four years that it has been manufactured and offered to the medical profession in America, justifies the belief that in its production here we are meeting a generally felt want.

Long experience in manufacturing Malt Extract has enabled us to completely overcome the many difficulties attending its manufacture in large quantities; and we positively assure the profession that our Extract of Malt is not only perfectly pure and reliable, but that it will keep for years, in any climate, without fermenting or moulding, and that its flavor actually improves by age. Our Extract is guaranteed to equal, in every respect, the best German make, while, by avoiding the expense of importation, it is afforded at less than half the price of the foreign article.

The Malt from which it is made is obtained by carefully malting the very best quality of selected Toronto Canada Barley. The extract is prepared by an *improved process*, which prevents injury to its properties or flavor by excess of heat. **It represents the soluble constituents of Malt and Hops**, viz: MALT SUGAR, DEXTRINE, DIASTASE, RESIN and BITTER of HOPS, PHOSPHATES of LIME and MAGNESIA, and ALKALINE SALTS.

Attention is invited to the following analysis of this Extract, as given by S. H. Douglas, Professor of Chemistry, University of Michigan, Ann Arbor.

TROMMER EXTRACT OF MALT CO:—I enclose herewith my analysis of your Extract of Malt:—
Malt Sugar 46.1; Dextrine, Hop-bitter, Extractive Matter, 23.6; Albuminous Matter (Diastase), 2.469; Ash—Phosphates, 1.712. Alkalies .377; Water, 25.7; Total, 99.958.
In comparing the above analysis with that of the Extract of Malt of the German Pharmacopœia, as given by Hager, that has been so generally received by the profession, I find it to substantially agree with that article.

Yours truly,
SILAS H. DOUGLAS,
Prof. of Analytical and Applied Chemistry.

This invaluable preparation is highly recommended by the medical profession, as a most effective therapeutic agent, for the restoration of delicate and exhausted constitutions. It is very nutritious, being rich in both muscle and fat-producing materials.

The very large proportion of *Diastase* renders it most effective in those forms of disease originating in *imperfect digestion of the starchy elements* of food.

A single dose of the Improved Trommer's Extract of Malt contains a larger quantity of the active properties of Malt than a pint of the best ale or porter; and not having undergone fermentation, is absolutely free from alcohol and carbonic acid.

The dose for adults is from a dessert to a tablespoonful three times daily. It is best taken after meals, pure, or mixed with a glass of milk, or in water, wine, or any kind of spirituous liquor. Each bottle contains 1½ pounds of the Extract.

Our preparations of Malt are for sale by druggists generally, throughout the United States and Canada, at the following prices:—

EXTRACT OF MALT,	*With*	*Hops (Plain)*,	- - - - - - -	$1.00

NEW HYPODERMIC SYRINGES.

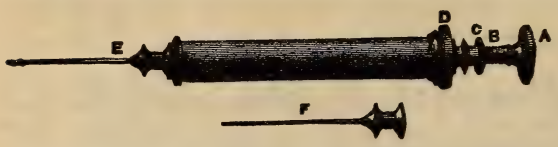

FIG. 48.—No. 2.

These cuts (two-thirds the actual size) represent a New Hypodermic Syringe of our Manufacture. With the exception of the needles, it is of German Silver, a material chosen as possessing, next to steel, the greatest rigidity and durability, while free from liability to oxydation. The barrel is formed by a process peculiar to ourselves, securing uniformity of calibre without soldered joint or seam. It is plated inside and outside with nickel. The piston is packed in the double parachute form, with leather prepared expressly for the purpose. It will be found to retain its elasticity, to operate smoothly, to resist all tendency of fluid to pass above, as of air below it. A nicely-engraved scale upon the piston-rod indicates minims, thirty being the capacity of the syringe.

Syringes Nos. 2, 3, and 4 have also a screw thread upon the piston-rod, and a traverse nut, thereby favoring the utmost nicety in the graduation of doses.

No. 3, Compact, has hollow piston-rod to receive one needle, also a protecting cover and fluid retainer; it may be carried in the Pocket Instrument or Vial Case, or without any case.

No. 4, Compact, is like No. 3, with the addition of a second needle, carried upon the syringe in the usual place, protected by a metal shield.

Nos. 1 and 2 are put up in neat morocco-covered case, with vial.

Two sizes of needles are furnished with each instrument, Nos. 1, 2, and 4; one only with No. 3. They are of refined steel, carefully tempered, and thoroughly plated with gold; they are of small diameter and large relative calibre, sharpened to such an angle as will offer least resistance to penetration, and therefore cause least pain. At the point of union with the socket they are reinforced with an outer covering of German silver, thereby overcoming the tendency to become broken at this place. They are connected with the barrels by a screw thread.

Prices: No. 1, *$3.50* No. 2, *$4.00* Postage, .03
" No. 3, *2.50* No. 4, *3.50* " .02

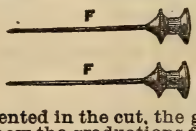
No. 3.

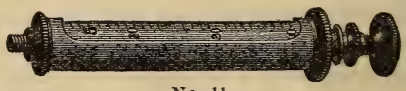
These Syringes are so thoroughly and strongly made as to be free from the annoying accidents common to most Hypodermic Syringes; and we believe that, for convenience, durability, and nicety of construction, they have no superior.

OTHER HYPODERMIC SYRINGES.

		Postage.
No. 7, glass-barrel, graduation engraved on barrel, with screw nut on piston, nickel-plated mountings, two best steel gilt needles, in neat case	*$3.00*	.02
No. 9, glass, graduation engraved and numbered on piston-rod, with screw nut, best steel gilt needles, in neat case	*3.00*	.02
No. 7 or No. 9, with two steel unplated needles, either	*2.50*	.02
No. 10, glass, Luer's (French), graduation as No. 9, one gold needle and two steel needles, silver mountings, neat velvet-lined morocco case	*12.00*	.02

No. 11, glass cylinder, fenestrated, nickel-plated metal mounting (see cut).





No. 11.

		Postage.
As represented in the cut, the glass cylinder is encased in a metal mounting, fenestrated to show the graduations for minims. The instrument may readily be taken apart for cleaning, and for those who prefer glass, is recommended for its non-liability to breakage. Price, with two best steel gilt needles, in a neat case	*$3.50*	.02

A MANUAL OF

EXAMINATION OF THE EYES.

A COURSE OF LECTURES DELIVERED AT THE "ÉCOLE PRATIQUE,"

BY DR. E. LANDOLT,

Directeur-Adjoint of the Ophthalmological Laboratory at the Sorbonne, Paris.

TRANSLATED BY

SWAN M. BURNETT, M.D.,

Lecturer on Ophthalmology and Otology in the Medical Department of the University of Georgetown, and Ophthalmic Surgeon to the Central Dispensary, Washington, D. C.

REVISED AND ENLARGED BY THE AUTHOR.

1 vol. 8vo, pp. 307. With numerous Illustrations and a large Chart. Price, cloth, $3.00.

This entirely new and valuable work has received the very highest testimonials, both in Europe and America. We quote the following from the American press:—

"Dr. Landolt is one of the clearest writers of the day. This little manual will certainly, in its English dress, prove of very great value to students of ophthalmology, and to those general practitioners who have a taste for examining eyes, for it gives instructions on very complicated subjects in a very terse and clear way. It would hardly seem possible to get so great an amount of matter into so small a space as Dr. Landolt has done in this book."—*Cincinnati Lancet and Clinic*, April, 1879.

"The author of this excellent work has succeeded in simplifying the subjects which he has put before the profession to such an extent as to render his book far superior to anything of the kind that has yet appeared in print.

"The plain, easy, and yet scientific manner in which Dr. Landolt presents the various subjects contained in his work is emphatically suggestive of an honest, earnest, astute student, and shows at once that the contents of the volume are the result of the work of a careful and conscientious observer. The book has no scent of scissors or paste pot. Although reference is made to other authors, I believe there is not a single quotation in it.

"The twenty-second lecture is upon examination of the fundus in detail. The special feature of this lecture is the manner in which the optic nerve and its sheaths are described. Nowhere can there be found a cut which so nearly represents the true nature and relations of the optic nerve and its sheaths. I believe that it is unique; at all events, it far excels all other efforts in this direction.

"The book is one that can be recommended to the doctor and student, with the assurance that it will meet every demand. May the author live long and continue his work in the same direction, is the wish of the reviewer."—*Louisville Medical News*, July, 1879.

"This book is a most admirable and complete *exposé* of our means and methods of making a thorough scientific examination of the human eye. Written in the attractive, easy style of lectures, unincumbered by unnecessary mathematical formulas, printed on heavy paper and in large and clear type, translated with care and skill into fluent English, this book will contribute largely toward awakening greater interest for ophthalmology among the reading members of our profession."—*Chicago Medical Journal and Examiner*, August, 1879.

"In the diseases of this organ diagnosis is of prime inportance. Accurate diagnosis is impossible except as based on an exhaustive examination. Directions for making such examinations are here given with great explicitness. * * * Many other points of general interest we had marked, but the foregoing must suffice to indicate the character of the work. Two charts are added to the text, exhibiting the various movements of the eyes and their derangements, and the general laws of paralysis of the ocular muscles.

"The book is an excellent one for specialist, practitioner and medical student. Written in good style, thoroughly abreast with modern investigation, broad in its statements and reasonings, it cannot fail to meet with a hearty welcome from all interested in its subject matter."—*The Detroit Lancet*, August, 1879.

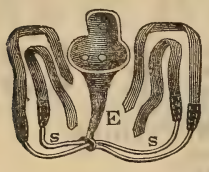
"We often see book notices containing the phrase, "This book supplies a want long felt in the profession." While we do not want to say anything against this phrase as applied to some publications, we will say that there is certainly no book, from the pen of even the ablest medical writers of the age, of which this can more truly be said than of the above volume. There was a want in the profession of just such a work, which is especially of great value to the busy practitioner, who has no time to spend in wading through the many volumes on Diseases of the Eye, in order to learn how to properly examine an eye, and diagnosticate its diseases correctly. It is a system of twenty-four lectures delivered by the author, in which he lays down correct rules for a systematic examination of the eye, so as to guard against errors in diagnosis, which in this branch of medicine are only too frequent. It is admirably written, clear and comprehensive, so that no one can help understanding the meaning of the author, and by following his directions many mistakes will be avoided, which, in as delicate an organ as the eye, would cause its destruction."—*The Southern Practitioner*, May, 1879.

PUBLISHED AND FOR SALE BY

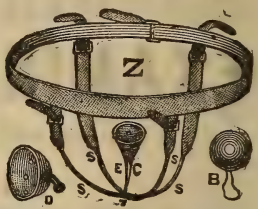
D. G. BRINTON,

No. 115 South Seventh Street, Philadelphia.

STAUFER'S SERIES OF HARD RUBBER UTERINE INSTRUMENTS.



Stem Uterine Supporters.—There are three varities. 1. The Spring Stem Prolapsus and Retroversion Cup E, by which the bed-ridden retroversion cases are now raised without the use of the dangerous Intra-Uterine Stems. The simplicity of this is apparent, and highly gratifying. Price on Elastic Belt Z, $7.00. 2. Spring Stem Prolapsus Cup on same Belt, $6.00. 3. Permanent Stem Prolapsus and Procidentia Cup E C, (*Economy*), $4.50. All elastically suspended on gums S S. All the Cups have borders to obviate sharp edges. In depth to embrace the entire cervix, leaning on the stems, and formed after the angle of the axis of the Uterus and Vagina. Without this property, no Stem Uterine Supporter can take its position proper, or move with every motion of the body, without producing friction liable to irritate; hence, the numerous rejected instruments already in the physicians' drawers, from whence arise a common distrust of a mechanical support, and slighting even Procidentia cases, which are the easiest to correct by a proper selection from this series of instruments. Used in sizes across the top; Virgins, 1¼ to 1⅝; Multiparea, 1⅝ to 2, and Procidentia to 2¼ inches and over sometimes. Waist measure taken for belt Z. *Self Sustaining.*—That a globular pessary has a tendency to be well retained, and its ascending power is long confirmed by the heavy Glass Balls. The advantage of this light, Hard Rubber Shell Globe is easy to be seen. *Cup D.*—Supliments E C, similar to shifting top on spring stem prolapsus cup. For Anteversion, full price list and Abdominal Supporting Belts and Internal Supporters combined, &c., see *Catalogue*. The Catalogue contains over 100 sections reading matter on the latest discoveries in Gynecology. Mailed on application, with numerous references. It illustrates over 150 in size and style new Uterine Supporting and Examing Instruments, so simple that the slightly experienced can bring to full view the entire Vaginal portion of the Uterus. Delivered free when pre-paid, and all the Hard Rubber parts on the Catalogue, including the Ink-Preserving Inkstand exchanged at cost without limit of time, to cover the purchaser's risk, repairing damages only, excepted. The inventor cheerfully renders any assistance, or answers any questions in *Gynecology* that his library and a twenty years' experience can furnish.



$1.50 $1.50

All the Instruments and Catalogue obtained through this Office.

Long Island College Hospital, Brooklyn, N.Y.

ANNUAL ANNOUNCEMENT, 1879-80.

THE READING AND RECITATION TERM will commence October 2, 1879, and close at the beginning of the Regular Term. THE REGULAR TERM will open February 2, 1880, and continue five months.

FACULTY OF THE COLLEGE.

DANIEL AYRES, M.D., LL.D.,
Emeritus Professor of Surgical Pathology and Clinical Surgery.

SAMUEL G. ARMOR, M.D., LL.D.,
Professor of the Principles and Practice of Medicine and Clinical Medicine, and Dean of the Faculty.

GEORGE W. PLYMPTON, M.D.,
Professor of Chemistry and Toxicology.

CORYDON L. FORD, M.D.,
Professor of Anatomy.

ALEXANDER J. C. SKENE, M.D.,
Professor of the Medical and Surgical Diseases of Women and Children.

JARVIS S. WIGHT, M.D.,
Professor of the Principles and Practice of Surgery and Clinical Surgery, and Registrar.

JOSEPH H. RAYMOND, M.D.,
Professor of Physiology and Microscopic Anatomy.

EDWARD SEAMAN BUNKER, M.D.,
Professor of Histology and General Pathology.

JOHN D. RUSHMORE, M.D.,
Professor of Principles and Practice of Obstetrics and Clinical Obstetrics.

JOHN A. McCORKLE, M.D.,
Lecturer on Materia Medica and Therapeutics.

The Clinical Advantages of the Long Island College Hospital are Unsurpassed in this Country.

For Circulars, address **Prof. SAMUEL G. ARMOR, M. D., Dean.**

A New Pharmaceutical Preparation.

DRY EXTRACT OF MALT.

Warranted free from any adulteration whatever; made with the utmost care, from selected Canada Barley Malt. It possesses the following advantages over the liquid extracts of malt—

Dry Extract of Malt
Dry Extract of Malt
Dry Extract of Malt

Will not change or ferment in hot weather.
Will not get mouldy.
Is a more convenient and elegant preparation.
Has not the appearance of molasses.
Will make an emulsion with cod-liver oil.
Will instantly dissolve in hot water or milk.
Can be used for children and invalids in place of cane sugar.
Is only half the price of liquid extracts of malt.

Barley Water may be made by dissolving one teaspoonful in half a pint of water.

PRICE—18-oz. BOTTLE, $1.00. 8-oz. BOTTLE, 50 CTS.

In prescribing, specify HORLICK'S MALT.

Horlick's Food, for Infants and Invalids.

ENTIRELY SOLUBLE, NOT FARINACEOUS, requires NO BOILING or STRAINING; when dissolved in hot water and milk, makes the genuine Liebig's soup. We refer, by permission, to the following eminent medical men, who have used it extensively in their practice:—Professors I. LEWIS SMITH, DE LASKIE MILLER, WM. H. BYFORD, I. ADAMS ALLEN, I. P. OLIVER, C. P. PUTNAM, A. J. GAWNE, H. O. MARCY, etc., etc.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Horlick's Food, for Adults.

A pure, dry extract of malted wheat, barley and oats.

The superiority of this preparation over the liquid extracts made from these cereals, and now so extensively advertised, will be readily seen, as it does **not ferment**, and is entirely soluble in milk or water, making a highly nutritious article of diet, in a convenient and portable form, that will readily be borne by the weakest stomach.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Manufact'd by J. & W. HORLICK & CO., Racine, Wis.

Wholesale and Retail Agent,
J. F. HAYES,
St. George Pharmacy, Philadelphia.

London Agent,
F. NEWBERRY & SONS,
37 Newgate Street, London E., Eng.

Sold by Druggists everywhere.

An eight-ounce bottle of either or all of the above preparations sent FREE to physicians, on application.

1166-1217

DOCTOR RABUTEAU'S

(Laureate of the Institute of France.)

DRAGEES, ELIXIR & SYRUP

Of Proto-Chloride of Iron.

"The experiments made in the hospitals of Paris have demonstrated that *Dr. Rabuteau's Dragees, Elixir and Syrup* regenerate the red globules of the blood with a rapidity never observed with the use of the other ferruginous preparations. These results have been proved by the various *Compt-Globules.*

"The ferruginous preparations of *Dr. Rabuteau* do not cause any constipation, and are perfectly tolerated by the weakest persons."—*Gazette des Hospitaux.*

Dr. Rabuteau's Elixir is prescribed when some difficulty is experienced in swallowing the Dragees; it is especially adapted to weak persons, whose digestive functions need strengthening or stimulating.

Dr. Rabuteau's Syrup is especially prepared for children, who take it readily, because of its agreeable taste.

MEYNET'S

DRAGEES OF COD-LIVER EXTRACT.

Careful experiments have established the fact that the **EXTRACT OF COD LIVERS** contains very valuable properties, which render it superior to the ordinary cod-liver oil. It is composed principally of *Gaduine*, large proportions of *Iodides, Chlorides, Bromides, Phosphoric Acid, Lime, Soda* and *Ammonia*, and especially *Propylamin*, all of which enter, but in very small proportions, into cod-liver oil.

These dragees of pure cod-liver extract take the place of cod-liver oil, and have been used with eminent success by medical celebrities of Europe in cases of *Scrofula, Rheumatic Affections, Rachitism, Phthisis*, and in all cases where a propylamic medication is indicated.

MEYNET'S DRAGEES are sold in bottles containing 100 dragees. Dose, 2 to 6 a day. Each dragee is equivalent to two tablespoonfuls of cod-liver oil.

MEYNET'S GRAINS are small granules intended for children. 10 are equivalent to 1 dragee.

E. FOUGERA & CO., New York, Agents for the U. S.

RIGOLLOT'S MUSTARD PAPER.

Is one of the most important and useful discoveries of the age, but it is not (as certain dealers of bad faith pretend) a preparation that any one can make, for it is not manufactured with a mustard that every one can buy.

RIGOLLOT'S MUSTARD PAPER.

Is the invention of Mr. P. RIGOLLOT, who is the exclusive owner; it is the only preparation which has been adopted by the civil and military hospitals and the armies and navies of France and England, and which has obtained a medal at the Centennial Exposition at Philadelphia. All other mustard plasters or leaves of whatever name, are but imitations of the original

RIGOLLOT'S MUSTARD PAPER.

Physicians will find it the most reliable sinapism, prompt and certain in its action, and will therefore always prescribe it. Every sheet in order to be genuine must bear the annexed signature of the inventor, *P. Rigollot*

Sold in tin boxes containing 10 sheets, also 25 and 100 sheets, by all respectable chemists throughout the world.

E. FOUGERA & CO., Agents,

NEW YORK.

TO THE MEDICAL PROFESSION.

LACTOPEPTINE,

The most important remedial agent ever presented to the Profession for Indigestion, Dyspepsia, Vomiting in Pregnancy, Cholera Infantum, Constipation, and all diseases arising from Imperfect Nutrition, containing the five active agents of digestion, viz.: Pepsin, Pancreatine, Diastase, or Veg. Ptyalin, Lactic and Hydrochloric Acids, in Combination with Sugar of Milk.

FORMULA OF LACTOPEPTINE.

Sugar of Milk.....40 ounces.	Veg. Ptyalin or Diastase.....4 drachms.
Pepsin..... 8 ounces.	Lactic Acid.....5 fl. drachms.
Pancreatine..... 6 ounces.	Hydrochloric Acid.....5 fl. drachms.

LACTOPEPTINE owes its great success solely to the Medical Profession, and is sold almost entirely by Physicians' Prescriptions. Its almost universal adoption by the Profession is the strongest guarantee we can give that its therapeutic value has been most thoroughly established.

The undersigned having tested LACTOPEPTINE, recommend it to the Profession:—

ALFRED L. LOOMIS, M.D.,
Professor of Pathology and Practice of Medicine, University of the City of New York.

SAMUEL R. PERCY, M.D.,
Professor Materia Medica, New York Medical College.

F. LE ROY SATTERLEE, M.D., PH.D.
Professor of Chemistry, Materia Medica and Therapeutics, in the New York College of Dentistry; Professor of Chemistry and Hygiene in the American Veterinary College, etc., etc.

A. VAN DEVEER, M.D., ALBANY, N. Y.,
Prof. of the Prin. and Prac. of Surg., Albany Med. College; Surg. Albany and St. Peter's Hospitals.
"I have given LACTOPEPTINE a good, thorough trial, and have been greatly pleased with the excellent results that have followed its administration."

JULIUS F. MINER, M.D.,
Prof. Special Surgery, University of Buffalo, N. Y.
"I have used LACTOPEPTINE in private practice for the past two years, in many cases with highly satisfactory results."

JOHN H. PACKARD, M.D., PHILADELPHIA, PA.,
Pres't Phila. Co. Obstet. Society; Surgeon Episcopal and Woman's Hospitals.
"I have found great satisfaction in the use of LACTOPEPTINE, and have ordered it frequently in cases of Dyspepsia, especially where there is want of tone and defective secretion."

JAS. AITKEN MEIGS, M.D., PHILADELPHIA, PA.,
Prof. of the Institutes of Med. and Med. Juris., Jeff. Medical College; Phys. to Penna. Hos.
"I have used LACTOPEPTINE with very good effect in a number of cases of Dyspepsia."

W. W. DAWSON, M.D., CINCINNATI, O.,
Prof. Prin. and Prac. Surg., Med. Col. of Ohio; Surg. to Good Samaritan Hospital.
"I have used LACTOPEPTINE with great advantage in cases of feeble digestion."

ALBERT F. A. KING, M.D., WASHINGTON, D. C.
Prof. of Obstetrics, University of Vermont.
"I have used LACTOPEPTINE, both in hospital and private practice, and have found it to answer fully the purposes for which it is recommended. As an immediate aid to the digestive function, I know of no remedy which acts more directly."

D. W. YANDELL, M.D., LOUISVILLE, KY.,
Prof. of the Science and Art of Surg. and Clinical Surgery, University of Louisville.
"I have made much use of LACTOPEPTINE, and take great pleasure in stating that it has rarely disappointed me. I shall, of course, continue to prescribe it."

L. P. YANDELL, M.D.,
Prof. of Clinical Medicine, Diseases of Children, and Dermatology, University of Louisville, Ky.
"LACTOPEPTINE is an exceedingly valuable preparation, and no one who gives it a fair trial can fail to be impressed with its usefulness in Dyspepsia."

ROBERT BATTEY, M.D., ROME, GA.,
Emeritus Prof. of Obstetrics, Atlanta Med. College, and Ex-Pres. Med. Association of Ga.
"I have used LACTOPEPTINE in a case of Dyspepsia with satisfaction. I think well of it."

CLAUDE H. MASTIN, M.D., LL.D.,
MOBILE, ALA.
"I consider LACTOPEPTINE the very best preparation of the kind which I have ever employed, and for patients with feeble digestion I know of nothing that is equal to it.

Prof. H. C. BARTLETT, PH.D., F.C.S.,
LONDON, ENG.
"I find the preparation of LACTOPEPTINE contains within itself all the principles required to promote a healthy digestion."

PRICE LIST.

LACTOPEPTINE	(in oz. bottles).....	per oz. $1.00
"	(" ").....	per doz. 10.00
"	(in ½ lb ").....	per lb. 12.00

We also prepare the various Elixirs and Syrups, in combination with Lactopeptine.

Sunnyside Medical Retreat

For Mental and Nervous Diseases, Inebriety and the Opium Habit,

FORT WASHINGTON, NEW YORK CITY.

This home, situated on the banks of the Hudson, under the management of Dr. Edward C. Mann, late Medical Superintendent of the New York State Emigrant Insane Asylum, receives cases of either sex affected with mental disorders, Inebriety or the Opium habit. The beauty of location and surroundings, handsomely furnished apartments, and the attentions and comforts of home life, all combine to make Sunnyside an attractive and popular private retreat. Applications may be made to Dr. Mann, either by mail or personally, at Fort Washington. Twelve trains daily from Hudson River Depot, 30th St., and 10th Ave. Broadway and 23d St. line of stages run direct to depot. The profession respectfully invited to call, and cordially welcomed. 1152-1y

CLOTH CASES FOR BINDING THE REPORTER, can be had at this office. Price 25 cts. each, by mail. Each case is neatly lettered, and fits one volume. tf.

BURN-BRAE,

A PRIVATE HOSPITAL

FOR

MENTAL DISORDERS.

Location beautiful and salubrious. Grounds extensive and handsomely laid out. Distance from Chestnut Street Bridge, Philadelphia, six miles. Access by Baltimore Turnpike, or West Chester and Philadelphia Railroad; nearest station, Oak Lane.

BURN-BRAE accommodates twenty patients of each sex. Though possessing all the safeguards and appliances of a Public Hospital, the arrangements are domestic and familiar. No efforts spared to make the house a comfortable *Home* for its guests.

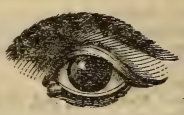
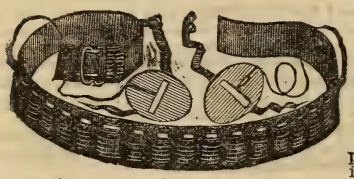
ARTIFICIAL EYES.



The finest, best, and most natural Artificial Eyes in the world, inserted and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Sixth St., Philadelphia, General Agent for the United States of L. Mueller's Celebrated German Artificial Eyes, which received the Gold Medal at Berlin, Vienna, Philadelphia (1876), etc. 1142-tf



DR. L. D. McINTOSH'S

Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

McINTOSH GALVANIC BELT AND BATTERY CO.,

DETROIT MEDICAL COLLEGE.

(MEMBER OF THE AMERICAN MEDICAL COLLEGE ASSOCIATION.)

SESSIONS OF 1879-'80

FACULTY.

JAMES F. NOYES, M.D.,
Emeritus Professor of Ophthalmology and Otology.

THEO. A. McGRAW, M.D., President,
Professor of Principles and Practice of Surgery and Clinical Surgery.

GEORGE P. ANDREWS, M.D.,
Professor of Principles and Practice of Medicine and Clinical Medicine.

C. B. GILBERT, M.D.,
Professor of Obstetrics, and Diseases of Women and Children.

N. W. WEBBER, M.D.,
Professor of General and Descriptive Anatomy, and Clinical Surgery.

SAMUEL P. DUFFIELD, PH.D., M.D.,
Professor of Toxicology and Medical Jurisprudence.

ALBERT B. LYONS, M.D.,
Professor of Chemistry and Director of the Chemical Laboratory.

LEARTUS CONNOR, M.D., Secretary,
Professor of Physiology and Diseases of the Eye and Ear.

H. O. WALKER, M.D.,
Lecturer on Anatomy and Genito-Urinary Diseases.

E. L. SHURLY, M.D.,
Lecturer on Materia Medica, Therapeutics and Clinical Laryngology.

HAL. C. WYMAN, M.D.,
Lecturer on Physiology.

J. G. JOHNSON, M.D.,
Lecturer on Diseases of Mind and Nervous System.

J. H. CARSTENS, M.D.,
Lecturer on Clinical Medicine.

F. A. SPALDING, M.D.,
Lecturer on Diseases of the Skin.

C. C. YEMANS, M.D.,
Lecturer on Chemistry.

E. A. CHAPOTON, M.D.,
Demonstrator of Practical Physiology and Instructor in Anatomy and Surgery.

J. W. ROBERTSON, M.D.,
Demonstrator of Practical Microscopy.

DAVID INGLIS, M.D.,
Instructor in Chemistry and Physiology.

E. B. WARD, M.D.,
Curator of Museum and Librarian.

The Collegiate Year is divided into three sessions.

Preliminary Session opens Wednesday, September 3d, 1879, and closes September 30th. The Clinics are held and the Lectures delivered by the Professors of the regular Faculty, and in the same order and frequency as during the Winter Term. Opportunity is given to dissect or work in the Chemical and Physiological Laboratories.

The Regular Session opens Wednesday, October 1st, 1879, and closes March 2d, 1880. During this term all the branches of *General Medicine* and *Surgery*, both scientific and practical, are taught with care and thoroughness. All students are daily examined on the subjects of the lectures and on their dissecting and laboratory work.

Senior students have *daily practice* in the *art of examining patients*, in forming their own diagnosis, prognosis and treatment. As this is done under the direction of the professor holding each clinic, and in the presence of the class, it constitutes an invaluable course of training.

The **Recitation Session** begins March 10th, 1880, and closes June 23d, 1880. Daily during this term will be held recitations for both Seniors and Juniors, and one or two clinics and a lecture.

The recitations will embrace a thorough drill upon the general subjects of the Regular Session, viz.: Anatomy, Chemistry, Physiology, Practice of Medicine, Materia Medica and Therapeutics, Surgery, Obstetrics, Diseases of Women and Children.

Though the Recitation and Preliminary Sessions are optional, it is hoped that all who can will avail themselves of their manifest advantages in commencing the study of medicine, or in supplementing the regular winter course.

Three Hospitals—Harper's, St. Mary's and St. Luke's—with two large free dispensaries, afford an abundance of clinical material for illustrative and practical teaching.

All lectures are delivered on Hospital grounds. The *peculiar feature* of this school is the *intimate union* between its *laboratory, clinical* and *didactic* instruction.

Fees.—For Preliminary and Regular Sessions: Matriculation, $5. Hospital Fees, $10. Lecture Fees, $40. Graduation, $25. Lecture Fees to third course students, $25.

For the Recitation Term the Lecture Fees are $10, to those who attend the other courses. All others are required to matriculate and take out the Hospital tickets.

All fees payable in advance to the *Secretary*.

Announcement and Catalogue, or any further information which may be desired, can be promptly obtained by addressing

LEARTUS CONNOR, M.D., Secretary,
92 Cass Street, Detroit.

DIFFERENTIAL DIAGNOSIS;

A MANUAL OF THE

COMPARATIVE SEMEIOLOGY

OF THE MORE IMPORTANT DISEASES,

BY F. DE HAVILLAND HALL, M.D.,

Assistant Physician to the Westminster Hospital, London.

American Edition, with Extensive Additions.

One Volume, 8vo., pp. 205. Printed on handsome tinted paper; bound in English pebbled cloth, with beveled boards. Price $2.00.

SENT BY MAIL, POST-PAID, ON RECEIPT OF THE PRICE.

DR. HALL'S work has received the highest encomiums from the English medical press, for its lucid arrangement, completeness, and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher. His work has been considerably enlarged in this edition, the editor having devoted especial attention to (1) pointing out the *early* and often overlooked symptoms of disease (2), enumerating the *pathognomonic* symptoms, and (3) bringing into relief the *peculiar features* of diseases in this country.

Most of the diseases which may be confounded are presented in comparative tables, setting forth their distinctive characteristics in the clearest possible light, and thus greatly facilitating their prompt diagnosis.

THE CONTENTS follow, in a general way, the nomenclature of the College of Physicians · thus the work is divided into two parts, the one on General Diseases, the other on Local Diseases.

The First Part contains, among other matters—

The Symptoms of the Febrile State Defined. Comparative Table of the Temperature and Pulse in the Leading Febrile Diseases. Differences between Symptomatic and Essential Fever. Tabular Comparison of Rötheln, Scarlet Fever, Measles, and Smallpox. Comparison of the Symptoms of Typhoid and Typhus; of Typhoid and Malarial Fever; of Typhoid and Typho-Malarial; of Typhoid Fever and the Typhoid State; of Typhoid and Relapsing Fever. Diagnosis between Epidemic and Sporadic Cerebro-spinal Meningitis; between Epidemic Meningitis and Typhus; between the Same and Congestive Malarial Fever. The Signs of the Arthritic, the Scrofulous, the Syphilitic, and the Tubercular Dyscrasiæ. Gout, Rheumatism, and their Allies.

The Second Part includes the Diagnosis of Local Diseases; embracing, for example—

The Differential Points between Hemorrhage, Thrombosis, and Embolism in the Brain; between the various forms of Sclerosis, Syphilosis, Paralysis, and Ataxy of the Spinal Cord; and between Organic, Functional, Toxic, and Hysterical Paralyses. These extremely difficult problems in diagnosis are set forth with the utmost clearness.

Neuralgia and its Counterfeits (myalgia, spinal irritation, cerebral abscess, alcoholism, hysteria, etc.)

Diagnostic Table of Acute, Chronic, Syphilitic, and Tubercular Laryngitis, Perichondritis, Benign and Malignant Growths, and Neuroses of the Larynx. Distinctions between Inflammatory Croup and Spasmodic Croup, on the one hand, and Membranous Croup and Diphtheria, on the other. Catarrhal as Distinct from Parenchymatous Tonsillitis.

Normal and Abnormal Chest Sounds (in all, eleven very carefully prepared tables). Dr. John Hughes Bennett's General Rules for Diagnosing Heart and Lung Affections. Comparison of the Three Forms of Phthisis. The Diagnosis of Incipient Phthisis (sixteen different signs are given of its very earliest stage). Differential Diagnoses between Incipient Phthisis and Bronchitis; between Acute Phthisis and Typhoid Fever; between Capillary Bronchitis and Pneumonia; between Pneumonia and Pleurisy; Pneumothorax and Pneumo-Hydrothorax, etc.

Dr. Dobell's Aphorisms on the Significance of Pain at and near the Heart; his Aphorisms on the Significance of Clubbing of the Finger Ends. Diagnosis between the Various Cardiac, Aortic, and Mitral Diseases. The Cheyne-Stokes Respiration Discussed.

To Distinguish Acidity of the Stomach from Fermentation and from Hypersecretion; Stomachal Vertigo from Cerebral Vertigo; Gastric Vomiting from Cerebral Vomiting. Comparative Symptoms of Atonic Dyspepsia, Chronic Gastritis, Gastric Ulcer, and Gastric Cancer. Special Points in the Diagnosis of Gastric Cancer. Abdominal Phthisis as Distinguished from Typhoid Fever. The Diagnosis of Hepatic Diseases. Hardy's Handy Tests for Bile in the Urine. What Pain in the Liver may Signify. What Jaundice may Signify. Hepatic Diseases Classified with Regard to the Size of the Liver. The Seven Forms of Bright's Disease Compared. The Four Forms of Diabetes Compared. The Kinds of Calculi and their Tests, etc.

The *British Medical Journal*, says:—"This is not of the type of books brought out by 'grinders.' The tables it contains are invaluable aids by the bedside, enabling the student and practitioner readily to compare signs met with in disease."

The *North Carolina Medical Journal*, says:—"The tabular method of comparing symptoms is well utilized. Very many valuable diagnostic formulæ are brought together."

The *Atlanta Medical Journal*, says:—"The comparative symptoms are given in a very satisfactory manner. The work will afford valuable aid to practitioners."

ANIMAL

VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... **.25**
Five Whole Quills (sufficient for ten vaccinations).....**$1.00**

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address

SCOTT'S EMULSION

PURE COD LIVER OIL

WITH

HYPOPHOSPHITES OF LIME AND SODA

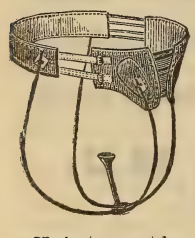
PERFECT, PERMANENT, PALATABLE.

The high character and wide reputation **Scott's Emulsion** has attained, through the agency of the Medical Profession, and the hearty support they have given it since its first introduction, is a sufficient guarantee of its superior virtues. The claims we have made—as to its permanency, perfection and palatableness—we believe have been fully sustained, and we can positively assure the profession that its high standard of excellence will be fully maintained. We believe the profession will bear us out in the statement that no combination has produced as good results in the wasting disorders incident to childhood, in the latter as well as the incipient stages of Phthisis, and in Scrofula, Anæmia and General Debility. We would respectfully ask the profession for a continuance of their patronage, and those who have not prescribed it to give it a trial. Samples will be furnished free upon application.

FORMULA.—50 per cent. of pure Cod-liver Oil, 6 grs. of the Hypophosphite of Lime, and 3 grs. of the Hypophosphite of Soda to a fluid ounce.

SCOTT & BOWNE,

1190-1215 eow **Manufacturing Chemists, 125 Hudson Street, N. Y.**



DR. McINTOSH'S

Natural

UTERINE SUPPORTER.

No instrument has ever been placed before the medical profession which has given such universal satisfaction. The combination is such that the Physician is able to meet every indication of Uterine Displacements. Falling Womb, Anteversion, Retroversion and Flexions are overcome by this instrument, where others fail; this is proven by the fact that since its introduction to the Profession it has come into more general use than all other instruments combined.

Among the many reasons which recommend this Supporter to the Physician is its self-adjusting qualities. The Physician after applying it need have no fear that he will be called in haste to remove or readjust it, as is often the case with rings and various pessaries held in position by pressure against the vaginal wall, as the patient can remove it at will and replace it without assistance.

The Abdominal Supporter is a broad morocco leather belt, with elastic straps to buckle around the hips, with concave front, so shaped as to hold up the abdomen. The Uterine Support is a cup and stem made of highly polished hard rubber, very light and durable, shaped to fit the neck of the womb, with openings for the secretions to pass out; as shown by the cuts. Cups are made with extended lips, to correct flexions and versions of the womb.

The cup and stem is suspended to the belt by two soft elastic Rubber Tubes, which are fastened to the front of the belt by simple loops, passing down through the stem of the cup and up to the back of the belt. These soft rubber tubes being elastic adapt themselves to all the varying positions of the body, and perform the service of the ligaments of the womb.

The instrument is very comfortable to the patient, can be removed or replaced by her at will, can be worn at all times, will not interfere with nature's necessities, will not corrode, and is lighter than metal. It will answer for all cases of Anteversion, Retroversions, or any Flexions of the Womb, and is used by the leading Physicians with never failing success, even in the most difficult cases.

Price—to Physicians, $8.00; to Patients, $12.00

Instruments sent by mail, at our risk, on receipt of price with 16 cents added for postage, or by Express, C. O. D.

DR. McINTOSH'S NATURAL UTERINE SUPPORTER CO.,

192 JACKSON STREET, CHICAGO, ILL.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bona fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established 12 years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a Companion Journal to the Medical and Surgical Reporter; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON, May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER, January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.

MALTINE with Hops.
MALTINE with Hypophosphites.
MALTINE with Pepsin and Pancreatine.
MALTINE with Phosphates.
MALTINE with Phosphate Iron, Quinia and Strychnia.
MALTINE Ferrated.
MALTINE WINE.
MALTINE WINE with Pepsin and Pancreatine.
MALTO-YERBINE.

———:‡o‡:———

MALTINE is now in the hands of the Wholesale Trade throughout the United States.

We guarantee that MALTINE *will keep perfectly in any climate, or any season of the year.*

FAITHFULLY YOURS,

REED & CARNRICK, New York.

BE CAREFUL TO SPECIFY McKESSON & ROBBINS'.

SPECIFY McKESSON & ROBBINS | Oval Shape. | Complete Coating.

IMPORTANT TO PHYSICIANS!

The fact that Sulphate of Quinine is only soluble in over 700 parts of water is not generally known, or if known is not usually considered, except in prescriptions, when this difficulty is overcome by the addition of Acid; and the further fact that **Bi-Sulphate of Quinine** is soluble in **only 10 parts of water** is as little appreciated.

McKesson & Robbins have paid much attention to the subject of putting Quinine into Pills, in a condition approaching that of a solution, and have at last succeeded in their **BI-SULPHATE OF QUININE PILLS,** and offer the same to the profession, confident that they will stand any test for solubility and prompt action. Physicians will please always specify **McK. & R. Bi-Sulph. Quinine Pills,** and they will not be disappointed in results.

Note.--With no reference to *respectable* druggists, we would say that cases have come to our knowledge and have been noted, where other pills have been substituted on prescriptions for ours.

POWDERED PURIFIED CHINOIDINE.

Containing all the Non-Crystalizable Alkaloids of Cinchona Bark.

Similar preparations have been lately offered in market AT HIGH PRICES under different fancy appellations, and claims made for the same as of equal efficiency with Quinine.

As a great demand exists for a cheap anti-malarial remedy, we introduce this preparation at low figures; and, in order that the profession may judge practically of its merits, will forward a sample to any physician's address, or mail one ounce upon receipt of FIFTY CENTS.

Yours respectfully,

McKESSON & ROBBINS,

Wholesale Druggists and Manufacturing Chemists,

91 FULTON ST., NEW YORK.

DUREL'S
TAR AND IRON SYRUP AND CAPSULES.

PREPARED BY DUREL, PHARMACIST, PARIS.

The combination in one preparation of the stimulating and balsamic properties of Tar with the tonic properties of a salt of iron is a desideratum which has at last been attained in these preparations. The indications for such a remedy are many, but it has been found especially useful in CHLOROSIS, BRONCHIAL CATARRH, CATARRH OF THE BLADDER, CHRONIC UTERINE DISCHARGES, depending upon an enfeebled or relaxed state of the system.

Sold by Chemists generally.

CRINON'S HÆMOGLOBIN,

The Albuminoid Ferruginous Principle of Blood.

HÆMOGLOBIN is the only physiological chalybeate. Associated as it is with the phosphates of the blood, it forms the most powerful of tonics, and at the same time a most nourishing food. It is especially useful in cases of *Anœmia, Chlorosis, Cachexias, Exhaustion* caused by excess of work, nervous debility, fatigue resulting from parturition and lactation. It replaces entirely liquid blood, which has been recommended and used with success in *Phthisis* and *wasting away.*

It is offered in two forms: In cachets (wafers), 60 of which are contained in a box; combined with chocolate in small squares, 30 of which are in a box; both forms can be sent by mail.

Prepared by C. CRINON, Paris, Pharmacist of the first class, Laureate of the Hospitals of Paris. Samples may be obtained by application to

E. FOUGERA & CO., New York, Agents for the U. S.

FOUGERA'S COMPOUND IODINISED
COD LIVER OIL.

Since the introduction of this oil in 1858, it has been found to be superior to all other kinds of Cod Liver Oil for the treatment of **General Debility, Consumption, Scrofula, Rickets, etc.**

It possesses not only all the **nourishing** qualities of the best Cod Liver Oil, but also the **tonic, stimulant** and **alterative** properties of **Iodine, Bromine** and **Phosphorus,** which are added in such proportions as to render it therapeutically five times as efficacious as pure Cod Liver Oil.

Through its **increased curative action, FOUGERA'S COD LIVER OIL** will be found to cure disease in a much shorter time than the pure oil; while favorable results will be obtained by its use in many advanced cases when the pure Cod Liver Oil would fail entirely.

FOUGERA'S READY-MADE MUSTARD PLASTERS.

A most useful, convenient, clean, and economical preparation. Not liable to change if kept in a dry place. Made of two strengths. Plasters No. 1, of pure mustard; Plasters No. 2, of one-half mustard. Price 40 cents, the tin box, or tin roll, of 10 plasters each. DIRECTIONS.—Dip the Plaster, or Plasters, a minute or two, in cold water; apply on the part, and cover with a band.

FOUGERA'S COMPOUND ICELAND MOSS PASTE.

(Iceland Moss, Lactucarium, Ipecac and Tolu.)

Used with great success against nervous and convulsive coughs, Whooping Cough, Acute Bronchitis, Chronic Catarrh, Influenza, etc.

Wakefulness, Cough, and other sufferings in Consumption, are greatly relieved by the soothing and expectorant properties of this Paste.

FOUGERA'S IODO-FERRO-PHOSPHATED ELIXIR OF HORSE-RADISH.

This Elixir contains Iodine, Pyrophosphate of Iron, the active principles of antiscorbutic and aromatic plants, and acts as a **tonic, stimulant, emmenagogue,** and a **powerful regenerator of the blood.** It is an invaluable remedy for all constitutional disorders due to the impurity and poverty of the blood. One of the advantages of this new preparation consists in combining the virtues of Iodine and Iron without the inky taste of Iodide of Iron.

HINTS IN THE OBSTETRIC PROCEDURE.

BY

WILLIAM B. ATKINSON, A.M., M.D.,

Lecturer on Diseases of Children, at the Jefferson Medical College; Physician to the Department of Obstetrics and Diseases of Women, Howard Hospital, Philad'a.

SECOND EDITION. ENTIRELY RE-WRITTEN AND ENLARGED. 12MO, CLOTH. PRICE, $1.00.

—o—

The very gratifying reception given this handbook of the essentials of the obstetrical art has led the author to submit it to a careful revision, and increase its size by adding a number of new topics.

It may safely be characterized as the most convenient, compact, reliable and handy *vade mecum* on obstetrics in the language; as the following personal and editorial statements sufficiently attest.

OPINIONS OF PHYSICIANS AND THE PRESS.

"It is really a '*multum in parvo*,' and will, I am sure, be of great service to multitudes in the profession who have hitherto followed the routine of old traditions."—*Prof. Fordyce Barker.*

"It is as good for the old as for the young practitioner."—*Dr. J. Marion Sims.*

"It abounds in extremely valuable hints, and is calculated to do much good."—*Prof. Goodell.*

"Founded upon the personal experience of the author, it must prove of value to the very wide circle of the profession who will be led to purchase it by their acquaintance with the author and his reputation."—(Philadelphia) *Medical Times.*

THEOPHILUS REDWOOD, Ph.D., F. C. S., Professor of Chemistry and Pharmacy to the Pharmaceutical Society of Great Britain, says, in reference to this preparation:—

"UNGUENTUM PETROLEI appears to be obtained from crude Petroleum by fractional distillation and subsequent purification. Products of a similar description have been introduced in pharmacy, and recommended as substitutes for animal or vegetable fats in the preparation of ointments or liniments.

"Among these the UNGUENTUM PETROLEI is distinguished by its having a firmer consistence and a higher melting point, and in these respects it resembles pure lard, from which it differs in that it is entirely free from liability to become rancid or to undergo any chemical change. It has an amber color, and a smooth, jelly-like appearance and is almost wholly free from odor or taste. It is free from, and insoluble in, water. It is very slightly soluble in rectified spirit, but very soluble in ether, in fixed oils and fats. I am of opinion that its characters and properties are such as to render it a valuable adjunct to our Materia Medica."

Dr. TILBURY FOX, London, writes:—"I like the UNGUENTUM PETROLEI very much indeed, and shall not fail to prescribe it."

From "THE LANCET," London, October 20th, 1878.—"Semi-transparent, pale yellow in color, and perfectly free from offensive smell. We consider it a valuable preparation, and hope its use will become as common in England as it is said to be in America."

From "THE MEDICAL TIMES AND GAZETTE," London, October 20th, 1878.—"The substance introduced under the name of UNGUENTUM PETROLEI is of about the consistence of good lard, has no smell, keeps any length of time, apparently without becoming rancid, and may be exposed to any kind of atmosphere without undergoing chemical change. It has long been, we understand, in use in America, where it enjoys a wide-spread popularity; and it will, we doubt not, come into extensive use here also, as a vehicle for making ointments, as a demulcent in various diseases of the skin, and as a lubricant."

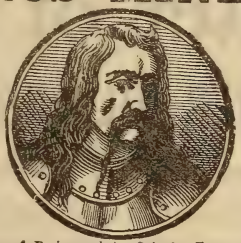
HUNYADI JANOS MINERAL WATER.

THE BEST AND CHEAPEST

NATURAL APERIENT.



THE BRITISH MEDICAL JOURNAL.

"HUNYADI JANOS.—The most agreeable, safest and most efficacious aperient water which has been brought under our notice."

LONDON MEDICAL RECORD.

"*Hunyadi Janos.*—The most pleasant and, owing to the smallness of its dose, the CHEAPEST of all the natural Aperient Waters."

THE LANCET.

"HUNYADI JANOS.—Baron Liebig affirms that its richness in aperient salts surpasses that of all other known waters."

From Prof. MACNAMARA, Prof. of Materia Medica, Royal College of Surgeons in Ireland.

"Far the most valuable and palatable of our Aperient Mineral Waters. I have been agreeably surprised with the result of a clinical investigation."

Specially approved by the Academy of Medicine of Paris, and its Sale in France authorized by decree of the French Government.

Medals awarded: Lyons, 1872. Vienna, 1873. Paris, 1878.

USES OF HUNYADI JANOS	ACCORDING TO OPINIONS OF EMINENT AUTHORITIES.
1. For habitual constipation.	"None so prompt, mild, and can be so well borne for a length of time."—Prof. SPIEGELBERG, *University of Breslau.*
2. By persons inclined to obesity, congestive and gouty disorders.	"I have used the Hunyadi Janos water in many cases of the rheumatic and gouty diathesis with very marked benefit. In cases accompanied with great obesity I prefer it to any other laxative."—Prof. LEWIS A. SAYRE, M.D., *Bellevue Hospital, New York.* "Preferred to Friedrichshall and Pullna by those who have tried them."—Prof. AITKEN, F.R.S., *Netley.* "Of great use in catarrhal conditions of the pile-ducts and bowels, and for CONGESTION of the LIVER and OTHER ORGANS."—*Medical Times and Gazette.*
3. In chronic affections of the organs of respiration and Circulation.	"Produces remarkable relief in chronic diseases symptomatic of affections of the abdominal and thoracic organs, and in serous effusions with impediment of respiration and circulation."—Prof. ALOIS MARTIN, *Royal Medical Councillor, University of Munich.*
4. Against hæmorrhoids, and portal and hepatic congestion.	"The most certain and the most comfortable in its action of all the aperient waters. The special indications for its use are, in costiveness (especially in that of pregnancy), in portal congestion with tendency to hæmorrhoids, and in sluggish action of the liver."—Inspector-General MACPHERSON, M.D., *Author of "Baths and Wells of Europe."*
5. During pregnancy; for nursery use; and in many female disorders.	"I prescribe none but this."—Baron v. SCANZONI, *Wurzburg.* "I prefer this to any and every other."—Dr. MARION SIMS, *New York, Honorary Fellow Obstetrical Society of London and Dublin.*
6. In bilious attacks and sick headaches.	"I have made use of the Hunyadi Janos mineral water ever since its introduction into this country, and with ever increasing satisfaction. It is highly beneficial to persons of sedentary habit, and in what are called bilious attacks."—Dr. SILVER, *Lecturer on Clinical Medicine, Charing-Cross Hospital.*
7. Against evil consequences of indiscretion in Diet.	"Has invariably good and prompt success: a most valuable item in the balneological treasury."—Prof. VIRCHOW, *Berlin.*

For ordinary aperient purposes a half wineglassful of the Hunyadi Water may be taken at bed-time, or a wineglassful taken in the morning fasting. It is most efficacious when warmed to a temperature not below 60 deg., or when an equal quantity of hot water is added to it.

HUNYADI JANOS MINERAL WATER.

INDISPENSABLE TO THE TRAVELLING PUBLIC.

To secure the genuine Water, require bottles with a blue label bearing the name

Sole Agents for the United States, **FREDK. DE BARY & CO.,** 41 and 43 Warren St., New York.

The Trommer Extract of Malt Company guarantee to the Medical Profession the excellent quality and absolute reliability of their Extract of Malt. and all its combinations.

Extract of Malt,

WITH COD-LIVER OIL,

FIRST PROPOSED BY DR. F. H. DAVIS, OF CHICAGO,

(See Transactions of American Medical Association, for 1876, page 176.)

Is presented to the medical profession as an efficient, palatable and very stable combination, consisting of equal parts of the ***Extract of Canadian Barley Malt*** and the best quality of genuine ***Norwegian Cod-liver Oil.*** Many patients take this preparation who cannot take the oil in any other form. It may be employed in all cases where Cod-liver Oil is appropriate, but is peculiarly adapted to those complicated with disordered digestion.

Extract of Malt,

WITH COD-LIVER OIL AND PHOSPHORUS,

Consists of equal parts of Extract of Malt and pure fresh Norwegian Cod-liver Oil, Phosphorus being added in the proportion of $\frac{1}{100}$ grain to the dose, and so combined as to be perfectly protected from oxidation. The ***Trommer Extract of Malt Company*** prepare this combination agreeably to the suggestion of ***Dr. Wilson Fox.*** It is specially adapted to cases of phthisis, bronchitis, pernicious anæmia, and diseases of the nervous system.

Extract of Malt,

WITH COD-LIVER OIL AND IODIDE OF IRON

added in the proportion of one grain to the dose. This combination is intended to meet those cases where the physician desires to add a more energetic alterative and restorative to the treatment with Cod-liver Oil and Extract of Malt. The manufacturers have received numerous letters from prominent physicians, referring to it in terms of high praise.

1090-1115eow

VACCINE VIRUS.

In order to meet properly the continued demand upon us for ANIMAL VIRUS, we have established tables for its propagation upon carefully selected heifers. The lymph used is of the well-known "Beaugency" stock, imported by ourselves expressly for this purpose. The result of several years' experience in supplying this lymph leads us to believe that its excellence is unsurpassed. The establishment is under the care of a competent physician, who will spare no pains to produce a perfectly RELIABLE and PURE article, which we are prepared to furnish FRESH, DAILY.

We can also furnish, to those who prefer it, HUMANIZED VIRUS, from healthy children, procured for us by physicians of undoubted reliability.

All our Virus is put up in strong, *air-tight, sealed packages*, for safe conveyance by mail or express, and will be sent (post-paid if by mail) upon the following terms:—

From the Heifer,	10 large Ivory Points, well charged on both sides	$1.50
	5 large Ivory Points, " " "	.80
	Large Ivory Points, less than 5, " " " each	.25
	1 Crust, new method, in air-tight Glass Capsule	2.00
From Healthy Infants,	10 small Ivory Points	1.50
	1 Crust from Unruptured Vesicles	2.00

Directions for vaccinating with either form of Virus, derived from methods successfully employed, will be furnished with Virus if requested.

We will warrant every package of Points and every Crust, giving a fresh supply in case of failure reported within fifteen days for Points, thirty days for Human, and ninety days for Kine Crusts. We can usually furnish Crusts one remove from the heifer, if preferred.

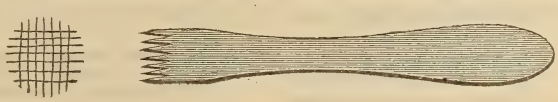
On account of their unreliability, we have hitherto furnished the usual form of Kine Crust unwillingly. Under our new method of taking and preserving them, however, after careful tests and an experience extending over several months, the results attained have been so satisfactory that we now offer them as not less active and reliable than other forms of Virus, while less liable to become inert with lapse of time. We now offer them on very favorable terms, and recommend them for transmission to a distance, and in all cases where it is desired to preserve Virus for some weeks or months, or to keep a supply at hand for emergencies.

We also furnish UNCHARGED IVORY POINTS, for physicians' use, at the following rates:—

Small	per 100, 25 cents; per 1000	2.00
Large	per 100, 50 cents; per 1000	4.00

Orders by mail or telegraph answered by return train.

Liberal discounts upon large supplies for Cities, Towns, and Institutions.



SCARIFYING VACCINATOR, STEEL, NICKEL PLATED. See Cut. Each 25 cents.

New Illustrated Catalogue of Surgical Instruments sent, post-paid, on request.

A New Pharmaceutical Preparation.

DRY EXTRACT OF MALT.

Warranted free from any adulteration whatever; made with the utmost care, from selected Canada Barley Malt. It possesses the following advantages over the liquid extracts of malt—

Dry Extract of Malt
Dry Extract of Malt
Dry Extract of Malt

Will not change or ferment in hot weather.
Will not get mouldy.
Is a more convenient and elegant preparation.
Has not the appearance of molasses.
Will make an emulsion with cod-liver oil.
Will instantly dissolve in hot water or milk.
Can be used for children and invalids in place of cane sugar.
Is only half the price of liquid extracts of malt.

Barley Water may be made by dissolving one teaspoonful in half a pint of water.

PRICE—18-oz. BOTTLE, $1.00. 8-oz. BOTTLE, 50 CTS.

In prescribing, specify HORLICK'S MALT.

Horlick's Food, for Infants and Invalids.

ENTIRELY SOLUBLE, NOT FARINACEOUS, requires NO BOILING or STRAINING; when dissolved in hot water and milk, makes the genuine Liebig's soup. We refer, by permission, to the following eminent medical men, who have used it extensively in their practice:—Professors I. LEWIS SMITH, DE LASKIE MILLER, WM. H. BYFORD, I. ADAMS ALLEN, I. P. OLIVER, C. P. PUTNAM, A. J. GAWNE, H. O. MARCY, etc., etc.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

Horlick's Food, for Adults.

A pure, dry extract of malted wheat, barley and oats.

The superiority of this preparation over the liquid extracts made from these cereals, and now so extensively advertised, will be readily seen, as it does **not ferment**, and is entirely soluble in milk or water, making a highly nutritious article of diet, in a convenient and portable form, that will readily be borne by the weakest stomach.

Price—18-oz. bottle, 75 cts. 8-oz. bottle, 40 cts.

TAMAR INDIEN,

A laxative, refreshing, and medicated Fruit Lozenge, agreeable to take, and never causing irritation. Its physiological action assures the immediate relief and effectual cure of

CONSTIPATION, CEREBRAL CONGESTION, HEADACHE, INDIGESTION, BILE, HEMORRHOIDS, etc., etc., by augmenting the peristaltic movement of the intestines, without producing undue secretion of the liquids. Unlike pills and the usual purgatives, it does not predispose to intestinal sluggishness, and the same dose always produces the same effect, that is to say, never needs increasing. These properties render "Tamar" invaluable to the weak and debilitated, and especially to ladies previous and subsequent to their accouchement. It is recommended by the most eminent Physicians of Paris; notably Drs. BELIN and TARDIEU, who prescribe it constantly for the above complaints, and with most marked success.

Prepared by **E. GRILLON,** Pharmacien de lère classe, 27 Rue Rambuteau, Paris. To be had of all respectable Chemists throughout the world.

PEPTODYN.

The New Digestive is a combination of the whole of the Digestive Secretions—Pepsine, Pancreatine, Diastase, etc.,

Forming an invaluable remedy in the treatment of all forms of Dyspepsia, and diseases arising from imperfect nutrition.

N. B.—*The success of this Remedy has led to several imitations of it,* which consist largely of Milk Sugar, and, as compared with Peptodyn, are of little or no real value as digestive agents.

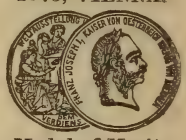
SAVORY & MOORE, 143 New Bond Street, London.

PARIS, 1867. Prize Medal.

1868. Silver Medal.

1872. Gold Medal.

1873, VIENNA. Medal of Merit.



BOUDAULT'S PEPSINE

IN POWDER, also WINE, ELIXIR, SYRUP, PILLS, AND LOZENGES OF PEPSINE.

Since the introduction of Pepsine by Boudault in 1854, BOUDAULT'S PEPSINE HAS BEEN, AND IS STILL CONSIDERED, THE MOST RELIABLE, as is attested by the awards it has received at the Exhibitions of 1867, 1868, 1872, 1873, and in 1876 at the Centennial Exposition in Philadelphia.

IT IS THE ONLY PEPSINE USED IN THE PARIS HOSPITALS.

Careful tests will enable any one to satisfy himself that BOUDAULT'S PEPSINE HAS A DIGESTIVE POWER AT LEAST DOUBLE that of the best Pepsines in the market, and that it is really the cheapest.

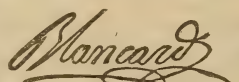
It is Sold in 1 ounce, 8 ounce, and 16 ounce Bottles.

Beware of so-called French Pepsines bearing fictitious names, and prescribe Boudault's only.

BLANCARD'S PILLS

OF UNCHANGEABLE IODIDE OF IRON.

Blancard's Pills of Iodide of Iron are so scrupulously prepared, and so well made, that none other have acquired a so well deserved favor among physicians and pharmaceutists. Each pill, containing one grain of proto-iodide of iron, is covered with finely pulverized iron, and covered with balsam of tolu. Dose, two to six pills a day. The genuine have a *reactive silver seal* attached to the lower part of the cork, and a green label on the wrapper, bearing the fac-simile of the signature of



Pharmacien, No. 40 Rue Bonaparte, Paris.

without which none are genuine.

Dr. W. B. CARPENTER,	JULIA KAVANAGH,	TENNYSON,
FRANCES POWER COBBE,	THOMAS HARDY,	BROWNING,

and many others, are represented in the pages of

LITTELL'S LIVING AGE.

In 1880, THE LIVING AGE enters upon its thirty-seventh year, admittedly unrivalled and continuously successful. A WEEKLY MAGAZINE, of sixty-four pages, it gives more than

Three and a Quarter Thousand

double-column octavo pages of reading-matter yearly, forming four large volumes. It presents in an inexpensive form, considering its great amount of matter, with freshness, owing to its weekly issue, and with a *satisfactory completeness* attempted by no other publication, the best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

During the coming year, Serial and Short Stories by the **Most Eminent Foreign Authors** will be given, together with an amount

Unapproached by any other Periodical

in the world, of the most valuable Literary and Scientific matter of the day from the pens of the foremost Essayists, Scientists, Critics, Discoverers, and Editors, above-named and many others, representing every department of Knowledge and Progress.

The importance of THE LIVING AGE to every American reader, as the only **satisfactorily fresh and complete** compilation of a generally inaccessible but indispensable current literature,—*indispensable* because it embraces the productions of

THE ABLEST LIVING WRITERS

in all branches of Literature, Science, Art, and Politics,—is sufficiently indicated by the following recent

Opinions.

"The last volume of THE LIVING AGE presents a fresh example of the judgment in selection and adaptation to the demands of the best popular literature, which have secured so wide a circulation to that periodical, and given it a high place among the magazines of the day."—*New York Tribune.*

"THE LIVING AGE supplies a better compendium of current discussion, information and investigation, and gives a greater amount and variety of reading matter, which it is well worth while to read, than any other publication . . . It is simply indispensable."—*Boston Journal.*

"It is, by all odds, the best eclectic published."—*Southern Churchman.*

"In no other single publication can there be found so much of sterling literary excellence."—*N. Y. Evening Post.*

"It has no equal in any country."—*Philadelphia Press.*

"To read it weekly is a liberal education."—*Zion's Herald, Boston.*

"Gives the best of all at the price of one."—*New York Independent.*

"It moves majestically on in the literary firmament as a star of the first magnitude, standing confessedly at the head of all the weekly publications of the civilized world. It is a library within itself."—*St. Louis Observer.*

"It being a weekly publication, is, comparatively speaking, the cheapest magazine published. Its contents are of the finest literature in our language."—*Commercial Advertiser, Detroit.*

"This noble magazine stands forth confessedly without a peer in the literary world. It is the embodiment of the purest and truest literature of the age."—*American Christian Review, Cincinnati,*

"*With it alone* a reader may fairly keep up with all that is important in the literature, history, politics, and science of the day."—*The Methodist, New York.*

"The reader finds little occasion to go beyond its columns for instructive or entertaining articles of any description."—*Boston Evening Traveller.*

"Commend us to LITTELL for a knowledge of what we ought to know, in the most portable shape, short of the latest cyclopædia."—*Boston Commonwealth.*

"We can only repeat what we have already said, that THE LIVING AGE leads all other publications of its kind, not only in years but in merit."—*Watchman, Boston.*

"As an eclectic, in the amount and value of its selections, THE LIVING AGE is without a peer."—*Presbyterian Banner, Pittsburgh.*

"It is a *thorough compilation* of what is best in the literature of the day, whether relating to history, biography, fiction, poetry, wit, science, politics, theology, criticism, or art."—*Hartford Courant.*

"There is no other way of procuring the same amount of excellent literature for anything like the same price."—*Boston Advertiser.*

"This, as we have often said, is the best eclectic we have."—*Richmond Whig.*

"Its publication in weekly numbers gives to it a great advantage over its monthly contemporaries in the spirit and freshness of its contents."—*The Pacific, San Francisco.*

"This is the most complete of all the magazines."—*Evangel, San Francisco.*

"LITTELL holds the palm against all rivals in the same field."—*Commercial, Louisville.*

"It remains altogether the best collection of the kind."—*Springfield Republican*

"The best and cheapest periodical in America."—*Evangelical Churchman, Toronto.*

"In it we find the best productions of the best writers upon all subjects ready to our hand. . . . . Through its pages alone it is possible to be as thoroughly well informed in current literature as by the perusal of a long list of monthlies."—*Philadelphia Inquirer.*

"There is nothing comparable to it in true value in the whole range of periodical literature."—*Mobile Daily Register.*

PUBLISHED WEEKLY, at $8.00 a year *free of postage.* An extra copy sent *gratis* to any one getting up a club of five new subscribers.

Extra Offer for 1880.

To all new subscribers for 1880 will be sent gratis the numbers of 1879 which contain, besides other interesting matter, the first chapters of "HE WHO WILL NOT WHEN HE MAY," a new story by **MRS. OLIPHANT**, now appearing in THE LIVING AGE from advance sheets.

CLUB PRICES FOR THE BEST HOME AND FOREIGN LITERATURE.

["Possessed of 'LITTELL'S LIVING AGE' and of one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"]—*Philadelphia Evening Bulletin.*

For $10.50, THE LIVING AGE and *either* one of the *four-dollar* monthly Magazines (or *Harper's Weekly* or *Bazar*), will be sent for a year, *with postage prepaid on both;* or, for $9.50, THE LIVING AGE and the *St. Nicholas*, or *Appleton's Journal, both postpaid.*

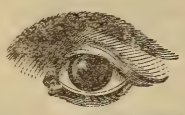
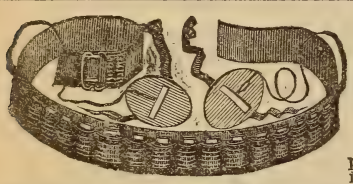
ARTIFICIAL EYES.



The finest, best, and most natural Artificial Eyes in the world, inserted and sold at Wholesale and Retail, by Dr. THEO. ROTH, 336 N. Sixth St., Philadelphia, General Agent for the United States of L. Mueller's Celebrated German Artificial Eyes, which received the Gold Medal at Berlin, Vienna, Philadelphia (1876), etc. 1142-tf



DR. L. D. McINTOSH'S
Electric or Galvanic Belt.

If this new combination could be seen and tested by the medical profession, few, if any, words would be needed from us in its favor, for it combines utility with simplicity in such perfection that seeing it is convincing proof of its great value. The medical profession to-day acknowledge, almost universally, Electro-Therapeutics.

This combination is composed of sixteen cells, placed in pockets on a belt. Each cell is made of hard vulcanized rubber, lined with a copper cell, which constitutes the negative plate. The rubber coating perfectly insulates each cell. The positive plates are of zinc, wrapped in a porous material, to absorb the exciting fluid and prevent contact with the copper, and permit the current to pass from the copper to the zinc.

Thus the cells are charged without wetting the belt, and the discomfort following to the patient. A wire is soldered to each zinc plate, which connects with the copper cell by entering a tube on its side, thus rendering the belt pliable.

The McIntosh Electric Belt is superior to all others for the following reasons:—

It is composed of sixteen cells—thus giving a powerful current. A current selector is so arranged that one or more cells can be used at pleasure. There is not anything irritating about the Belt, as is the case with all other contrivances where the metal used is wet with weak acids and placed next to the skin. The electrodes are pieces of metal covered similar to ordinary battery electrodes, and connected with the cells by connecting cords. By this arrangement, a current from the Belt can be applied, to produce a general or local effect.

Many physicians who have used this belt in their practice do not hesitate to recommend it to the profession.

Price $10.00. With Suspensory, $12.50.

Our pamphlet on Medical Electricity sent free on application. Address

UNIVERSITY OF VERMONT.

MEDICAL DEPARTMENT, BURLINGTON, Vt.

TWENTY-SEVENTH SESSION, 1880.

FACULTY OF MEDICINE.

MATTHEW HENRY BUCKHAM, A.M., D.D., Burlington, Vt., President.
SAMUEL WHITE THAYER, M.D. L.L.D., Burlington, Vt., Emeritus Professor of General and Special Anatomy. Consulting Surgeon to Mary Fletcher Hospital.
WALTER CARPENTER, M.D., Burlington, Vt., Professor of the Theory and Practice of Medicine. Consulting Physician to Mary Fletcher Hospital.
JOHN ORDRONAUX, M.D., L.L.D., New York City, Emeritus Professor of Medical Jurisprudence.
A. F. A. KING, M.D., Washington, D. C., Professor of Obstetrics and the Diseases of Women. Consulting Physician to Mary Fletcher Hospital.
WILLIAM DARLING, A.M., M.D., F.R.C.S., LL.D., New York City, Professor of General and Special Anatomy.
HENRY D. HOLTON, A.M., M.D., Brattleboro, Vt., Professor of Materia Medica and General Pathology. Consulting Surgeon to Mary Fletcher Hospital.
JAMES L. LITTLE, M.D., New York City, Professor of the Principles and Practice of Surgery. Consulting Surgeon to Mary Fletcher Hospital.
A. P. GRINNELL, M.D., Burlington, Vt., Professor of Physiology and Microscopic Anatomy. Attending Physician to Mary Fletcher Hospital.
RUDOLPH A. WITTHAUS, M.D., New York City. Professor of Chemistry and Toxicology.

PROFESSORS FOR SPECIAL SUBJECTS.

WILLIAM A. HAMMOND, M.D., Surgeon-General U. S. Army (Retired). New York City, Professor of the Diseases of the Mind and Nervous System.
ROBERT W. TAYLOR. M.D., New York City, Professor of Diseases of the Skin.
A. T. WOODWARD, M.D., Brandon, Vt., Professor of the Surgical Diseases of Women. Consulting Physician to Mary Fletcher Hospital.
D. B. ST. JOHN ROOSA, M.D., New York City, Professor of the Diseases of the Eye and Ear.
STEPHEN M. ROBERTS, M.D., New York City, Professor of Diseases of Children.
GEORGE M. GARLAND, M.D., Boston, Mass., Professor of Thoracic Diseases.
LEROY M. BINGHAM, M.D., Burlington, Vt., Demonstrator of Anatomy. Attending Physician to Mary Fletcher Hospital.
CLINTON WAGNER, M.D., New York City, Professor of Diseases of the Throat.

HOSPITAL ADVANTAGE.—The Mary Fletcher Hospital, with its commodious amphitheatre, is open for clinical instruction during this session. The Medical and Surgical Clinics of the College will be held in the amphitheatre attached to the Hospital. In addition to these regular clinics of the College, instructions will be given at the bedside by the Professors of the Medical Department of the University.

LECTURES ON SPECIAL SUBJECTS.—These lectures, by gentlemen well-known as authorities recognized in their particular departments, will be delivered during the regular session.

CLINIQUES.—Besides these lectures, there will be Cliniques held as follows:—

SURGICAL CLINIQUE, by Professor Little, every Saturday, from 9 to 12, during the last half of the session.
MEDICAL CLINIQUE, by Professor Carpenter, on Wednesday morning, during first half of the term.
CLINIQUE FOR DISEASES OF NERVOUS SYSTEM, by Professor Hammond, during his course.
CLINIQUE FOR DISEASES OF EYE AND EAR, by Professor Roosa, during his course of lectures.
CLINIQUES FOR DISEASES OF SKIN, by Professor Taylor, during his course.
CLINIQUE FOR DISEASES OF CHILDREN, by Professor Roberts.
CLINIQUE FOR THORACIC DISEASES, by Professor Geo. M. Garland M.D.
CLINIQUE FOR DISEASES OF THROAT, by Professor Clinton Wagner.

THE PRELIMINARY TERM, consisting of a course of Lectures and Recitations in the various branches of Medicine and Surgery, will begin on the first Thursday of Nov., 1879, and continue until March 1st, 1880. FEE, $30.

THE REGULAR WINTER SESSION will commence on the first Thursday of March, 1880, and continue sixteen weeks. This course will consist of from five to six lectures daily, in the various departments of Medicine and Surgery.

FEES FOR THE REGULAR SESSION.

MATRICULATION FEE, PAYABLE EACH TERM.....$ 5 00
FEES FOR THE FULL COURSE OF LECTURES by all the Professors.. 70 00
GRADUATION FEE..... 25 00

Material for dissection will be furnished at cost. The tickets are to be taken out at the beginning of the session.

Students who have already attended two full courses of lectures in other regular schools, are admitted on paying the matriculation fee and $25. Students who have attended two full courses in this College, or who have attended one full course in some regularly established medical school, and one full course in this College, are admitted to a third course of lectures on paying the matriculation fee only. GRADUATES of this school are admitted without fee. GRADUATES of other regular schools and *Theological Students* are admitted on general ticket, by paying the matriculation fee. Good board can be obtained at reasonable rates.

For further particulars and Circular, apply to the Secretary,

1181-1206eow

Prof. A. P. GRINNELL, M.D., Burlington, Vt.

DIFFERENTIAL DIAGNOSIS;

A MANUAL OF THE

COMPARATIVE SEMEIOLOGY

OF THE MORE IMPORTANT DISEASES,

BY F. DE HAVILLAND HALL, M.D.,

Assistant Physician to the Westminster Hospital, London.

American Edition, with Extensive Additions.

One Volume, 8vo., pp. 205. Printed on handsome tinted paper; bound in English pebbled cloth, with beveled boards. Price $2.00.

SENT BY MAIL, POST-PAID, ON RECEIPT OF THE PRICE.

DR. HALL'S work has received the highest encomiums from the English medical press, for its lucid arrangement, completeness, and accuracy. He himself is known in London as a practitioner of great skill, and an unusually successful medical teacher. His work has been considerably enlarged in this edition, the editor having devoted especial attention to (1) pointing out the *early* and often overlooked symptoms of disease (2), enumerating the *pathognomonic* symptoms, and (3) bringing into relief the *peculiar features* of diseases in this country.

Most of the diseases which may be confounded are presented in comparative tables, setting forth their distinctive characteristics in the clearest possible light, and thus greatly facilitating their prompt diagnosis.

THE CONTENTS follow, in a general way, the nomenclature of the College of Physicians: thus the work is divided into two parts, the one on General Diseases, the other on Local Diseases.

The First Part contains, among other matters—

The Symptoms of the Febrile State Defined. Comparative Table of the Temperature and Pulse in the Leading Febrile Diseases. Differences between Symptomatic and Essential Fever. Tabular Comparison of Rötheln, Scarlet Fever, Measles, and Smallpox. Comparison of the Symptoms of Typhoid and Typhus; of Typhoid and Malarial Fever; of Typhoid and Typho-Malarial; of Typhoid Fever and the Typhoid State; of Typhoid and Relapsing Fever. Diagnosis between Epidemic and Sporadic Cerebro-spinal Meningitis; between Epidemic Meningitis and Typhus; between the Same and Congestive Malarial Fever. The Signs of the Arthritic, the Scrofulous, the Syphilitic, and the Tubercular Dyscrasiæ. Gout, Rheumatism, and their Allies.

The Second Part includes the Diagnosis of Local Diseases; embracing, for example—

The Differential Points between Hemorrhage, Thrombosis, and Embolism in the Brain; between the various forms of Sclerosis, Syphilosis, Paralysis, and Ataxy of the Spinal Cord; and between Organic, Functional, Toxic, and Hysterical Paralyses. These extremely difficult problems in diagnosis are set forth with the utmost clearness.

Neuralgia and its Counterfeits (myalgia, spinal irritation, cerebral abscess, alcoholism, hysteria, etc.)

Diagnostic Table of Acute, Chronic, Syphilitic, and Tubercular Laryngitis, Perichondritis, Benign and Malignant Growths, and Neuroses of the Larynx. Distinctions between Inflammatory Croup and Spasmodic Croup, on the one hand, and Membranous Croup and Diphtheria, on the other. Catarrhal as Distinct from Parenchymatous Tonsillitis.

Normal and Abnormal Chest Sounds (in all, eleven very carefully prepared tables). Dr. John Hughes Bennett's General Rules for Diagnosing Heart and Lung Affections. Comparison of the Three Forms of Phthisis. The Diagnosis of Incipient Phthisis (sixteen different signs are given of its very earliest stage). Differential Diagnoses between Incipient Phthisis and Bronchitis; between Acute Phthisis and Typhoid Fever; between Capillary Bronchitis and Pneumonia; between Pneumonia and Pleurisy; Pneumothorax and Pneumo-Hydrothorax, etc.

Dr. Dobell's Aphorisms on the Significance of Pain at and near the Heart; his Aphorisms on the Significance of Clubbing of the Finger Ends. Diagnosis between the Various Cardiac, Aortic, and Mitral Diseases. The Cheyne-Stokes Respiration Discussed.

To Distinguish Acidity of the Stomach from Fermentation and from Hypersecretion; Stomachal Vertigo from Cerebral Vertigo; Gastric Vomiting from Cerebral Vomiting. Comparative Symptoms of Atonic Dyspepsia, Chronic Gastritis, Gastric Ulcer, and Gastric Cancer. Special Points in the Diagnosis of Gastric Cancer. Abdominal Phthisis as Distinguished from Typhoid Fever. The Diagnosis of Hepatic Diseases. Hardy's Handy Tests for Bile in the Urine. What Pain in the Liver may Signify. What Jaundice may Signify. Hepatic Diseases Classified with Regard to the Size of the Liver. The Seven Forms of Bright's Disease Compared. The Four Forms of Diabetes Compared. The Kinds of Calculi and their Tests, etc.

The *British Medical Journal*, says:—"This is not of the type of books brought out by 'grinders.' The tables it contains are invaluable aids by the bedside, enabling the student and practitioner readily to compare signs met with in disease."

The *North Carolina Medical Journal*, says:—"The tabular method of comparing symptoms is well utilized. Very many valuable diagnostic formulæ are brought together."

The *Atlanta Medical Journal*, says:—"The comparative symptoms are given in a very satisfactory manner. The work will afford valuable aid to practitioners."

ANIMAL
VACCINE VIRUS,

PROPAGATED AT THE

MISSOURI VACCINE FARM.

The *Missouri Vaccine Farm* was established in 1875, for the purpose of supplying physicians with a *pure* and *reliable* Vaccine Virus from the heifer, in quantities to suit the demand. Each animal used is under my immediate supervision, from the time it is brought on the farm until the Virus is collected from it, so that the greatest care is exercised in producing a Vaccine that will reproduce *genuine vaccinia* upon the human being.

Four years of close observation and experience in preparing the Virus from the Animal, and a visit to the State Vaccine Institutes at Brussels, Belgium, and Paris, France, in 1878, where (only) cowpox Virus is used, have enabled me to so perfect my arrangements for producing the Virus that I can supply the largest demands.

The *past success*, the *more general use* of the Virus, and the *encouraging testimonials* of physicians from different sections of the country, warrant me in continuing the enterprise.

QUILLS.—Of the various forms of Virus supplied physicians, that *dried* on *quills* has proven the *most reliable*, and therefore is especially recommended.

Five *whole quills* are put up in an air-tight package (sufficient for 10 vaccinations), and sold for $1.00.

R. M. HIGGINS, M.D.

PRICE LIST.

Whole Quills (each sufficient for two vaccinations) each..... **.25**
Five Whole Quills (sufficient for ten vaccinations).....**$1.00**

A fresh supply of this Vaccine will be received every few days, and only *fresh Virus* will be sent out.

All failures duplicated when used strictly in accordance with printed directions, which accompany each package.

All orders by mail or telegraph will receive prompt attention. Address

D. G. BRINTON, M. D.,

PHILADELPHIA,

1183- GENERAL AGENT.

THE WEEKLY
MEDICAL AND SURGICAL REPORTER.

THE MEDICAL AND SURGICAL REPORTER has been established over thirty years, and has, it is believed, a *bonâ fide* subscription list unsurpassed by any medical weekly in America.

It is issued every Saturday, neatly cut and bound, and gives 24 large octavo, doubled-columned pages of reading matter in each number. It claims the following

SPECIAL FEATURES:

IT IS INDEPENDENT, being controlled by no clique, college, society or publishing house.

COSMOPOLITAN. Having subscribers and contributors in every State in the Union, it is edited in the interest of the *whole profession*, not of one section or locality.

EMINENTLY PRACTICAL. Special prominence is given to Diagnosis and Therapeutics—the *recognition* and the *treatment* of disease, the real *business* of the professional man.

UNSURPASSED IN CHEAPNESS. When the *size* and *number* of its pages, and its frequency of issue are taken into account, it gives more matter for the money than any other medical journal in this country.

PARTICULARLY SUITED TO COUNTRY PHYSICIANS. It has always been a special aim of the editor to furnish a journal that would keep a reader remote from medical centres *fully up to the times* in his profession. Every surgical invention and new remedy of value, every medical book of moment, every professional discussion or news item of interest, will be found recorded in its pages. *Contributions* from country physicians are always welcome.

THE HALF-YEARLY COMPENDIUM

Appears on January 1st and July 1st of each year, forming two semi-annual volumes of 300 large octavo pages each, with complete Index. It has been established 12 years, with a constantly growing circulation.

☞ While complete in itself, it is also intended as a **Companion Journal to the Medical and Surgical Reporter**; it is made up from articles *which have not been included* in the latter. The one journal is the Complement of the other.

From 600 to 700 separate articles appear each year in its various departments, carefully prepared, and giving the choicest selections from all sources, American and Foreign. It is the *only* work of the kind which does justice to *American* writers in medicine.

The Physician's Daily Pocket Record,

COMPRISING A VISITING LIST, MANY USEFUL MEMORANDA, TABLES, Etc.

By S. W. BUTLER, M.D.

Edited Annually, and Adapted for 35 or 70 Patients Daily. Strongly Bound in Am. Russia, with Steel Spring Clasp.

PRICE: { **Edition for 35 Patients Daily, - - $1.50**
" 70 " " - - 2.00

☞ The name of the purchaser will be stamped in gilt letters on the tuck, for 10 cents extra. ☜

TO THE MEDICAL PROFESSION.

MALTINE "*is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or from any one variety of grain.*"

MALTINE "*is nutritive to every tissue of the body, from bone to brain.*"—PROF. R. OGDEN DOREMUS, *New York.*

MALTINE "*contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats, or malted Barley.*"—PROF. JOHN ATTFIELD, *London.*

"*Wheat must be considered as by far the most nutritious of all grains.*" —*Physiology of Man.*—AUSTIN FLINT, JR.

"*Barley and Rye are inferior in nutritive power to any of the other cereals.*" —PROF. THOS. KING CHAMBERS, *London.*

Our experience of many years as Manufacturing Pharmacists has brought us in daily contact with those engaged in prescribing, and has afforded us advantages for study, experiment and practical development, which have engaged our most critical attention in perfecting new and more efficacious agents for physicians' use in the control and subjection of disease, and we assure the Medical Profession that, in no instance, shall we attempt to arrest their attention, except we have some production worthy of their highest consideration.

Before we began the manufacture of MALTINE we analyzed the various Extracts of Malt manufactured in this country and Europe. We found that many of them had a burnt taste and smell, and a dark appearance, and were deficient in many essential elements that they should contain, owing to the excessive heat employed. Most of these preparations had probably been evaporated, or the grain mashed, at a temperature of 212° Fahrenheit, and consequently the Albuminoids and Diastase were almost entirely destroyed, and the other nutritive properties much impaired. This cannot be otherwise when the German formula is followed, for it directs that the extract shall be heated to 212° Fahrenheit (*see formula for Malt Extract, German Pharmacopœia, fol.* 124.) This led us to a series of experiments, to ascertain whether a preparation could not be produced that would contain the nutritive properties of the grain unimpaired. Further research developed the fact that malted Barley was deficient in most of the

essential elements of nutrition, with the exception of mineral matters, or bone producers. These experiments led us to the production of an extract from malted Barley, Wheat and Oats, which we call MALTINE for brevity, and which contains all the elements of nutrition, in the proportions required by the human organism, unimpaired by heat; our evaporation being conducted *in vacuo*, at 110° Fahrenheit.

MALTINE is rapidly taking the place of Extracts of Malt in Europe as well as in this country, and will unquestionably be used far more extensively throughout the world by the Medical Profession.

We are confident that a practical test of MALTINE will convince any practitioner that we justly make the following claims, viz.:—

First, That Wheat and Oats are much richer in alimentary principles than Barley, and that it is only in a combination of these cereals, in the proper proportions, that a perfect preparation can be produced.

Second, That our process for extracting the nutritive elements unimpaired is far superior to the German.

Third, That MALTINE possesses three times the nutritive and therapeutical value of any Extract of Malt in the market.

Fourth, That it is the only perfect food remedy ever offered to the Medical Profession.

From our experience during the past fifteen years, in closely watching the success of old and new remedies among the Medical Profession, we feel the utmost confidence in claiming that MALTINE and its compounds can be used with more positive results than any preparation now known, in cases of Dyspepsia, attended with general Debility, Imperfect Nutrition and Deficient Lactation; Affections of the lungs and throat, such as Phthisis, Coughs, Colds, Hoarseness, Irritation of the Mucous Membranes, and Difficult Expectoration; Cholera Infantum, and wasting diseases of Children and Adults; Convalescence from Fevers, general and nervous Debility, and, whenever it is necessary, to increase the vital forces and build up the system.

MALTINE, and all productions of our house, are kept strictly and invariably in the hands of the Medical Profession.

FAITHFULLY YOURS,

REED & CARNRICK,

196 and 198 Fulton Street,

NEW YORK.

PROFESSIONAL OPINIONS OF MALTINE.

During the past year we have received nearly one thousand letters from the Medical Profession in this country and Great Britain, referring to the therapeutic value of MALTINE; *their character is indicated by several extracts which we present below:—*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We have realized decided benefit, in a large number of cases treated in the City Hospital and at the Dispensary connected with it, from your preparations of Maltine. Many persons will welcome them as most efficacious and palatable substitutes for Cod-liver Oil, and as covering a wider range of application.

S. WESLEY CHAMBERS, M.D., *Resident Physician, City Hospital.*

———:‡o‡:———

BALTIMORE, MD., January 20, 1879.

We take pleasure in saying, in behalf of your preparations of Maltine, that they have fully come up to the measure of your representations. They have given us the greatest satisfaction. We have used them extensively, to the great benefit of our patients.

DAVID STREETT, M.D., *Resident Physician, Maternite Hospital.*

———:‡o‡:———

LOUISVILLE, KY., July 11, 1879.

I am using Maltine with Pepsin and Pancreatine in my family, and am exceedingly pleased with its results. Professor Flint, of your city, whom I highly esteem, has been consulted about the case, and knows the solicitude I have had about it. The above preparation in Sherry, after meals, has been productive of great benefit. I am using it in the City Marine Hospital, the Kentucky Infirmary for Women and Children, and in my private practice, and am much pleased with the results obtained. T. P. SATTERWHITE, M.D.

———:‡o‡:———

JACKSON, MICH., October 1878.

In its superiority to the Extract of Malt prepared from Barley alone, I consider Maltine to be all that is claimed for it, and prize it as a very valuable addition to the list of tonic and nutritive agents.

C. H. LEWIS, M.D.

———:‡o‡:———

ST. CHARLES, MINN., March 23, 1879.

In conditions of Anæmia, in convalescence from severe and protracted disease, especially in chronic cases, where there is great general debility, and in the enfeebled conditions of aged persons, I have learned to rely on Maltine; nor in any instance have I been disappointed of good results, therein forming *a marked contrast, so far as my experience goes, to preparations of Malt which I had used previously, and had abandoned the use of them when my attention was called to Maltine.*

C. R. J. KELLAM, M.D.

———:‡o‡:———

36 WEYMOUTH ST., PORTLAND PLACE, LONDON,
May 30, 1879.

I am ordering your Maltine very largely.

LENNOX BROWN, F.R.C.S., *Sen. Surg. Centl. Throat and Ear Hospital, etc.*

———:‡o‡:———

75 LEVER ST., PICCADILLY, MANCHESTER,
January 16, 1879.

I have used your Maltine pretty extensively since its introduction, and have found it exceedingly useful; particularly in cases where Cod-liver Oil has not agreed, have I found the Maltine with Beef and Iron most valuable. J. SHEPHERD FLETCHER, M.D., M.R.C.S.

———:‡o‡:———

EDDE CROSS HOUSE, ROSS, March 8, 1879.

I am very pleased to bear testimony to the great value of Maltine. I prescribe it extensively, and with the best results, especially in anæmic conditions of the system, with much stomach irritability, which it seems to allay very speedily. J. W. NORMAN, M.B., M.R.C.S.

CHEMICAL REPORTS ON MALTINE.

By R. Ogden Doremus, M. D., LL. D.,

PROFESSOR OF CHEMISTRY AND TOXICOLOGY, BELLEVUE HOSPITAL MEDICAL COLLEGE; PROFESSOR OF CHEMISTRY AND PHYSICS, COLLEGE OF THE CITY OF NEW YORK.

NEW YORK, April 17, 1879.

I have visited the works at Cresskill, on the Hudson, where MALTINE is prepared, and spent portions of two days in witnessing the chemical processes for making the same. I was particularly impressed with the thorough cleanliness observed, as well as with the completeness of the apparatus employed for accomplishing the desired result—from the first treatment of the grains, to the concentration of the liquid product by evaporation *in vacuo*. The operation is effective in extracting the whole of the nutritive constituents of the grains of malted Barley, Wheat and Oats, with but a slight residue, and is the most complete method yet devised, with which I am acquainted, for accomplishing this object.

MALTINE is superior in therapeutic and nutritive value to any Extract of Malt made from Barley alone, or to any other preparation of any one variety of grain. From a chemical and medical standpoint, I cannot commend too highly to my professional brethren this unique and compact variety of vegetable diet and remedial agent, nutritive to every tissue of the body, from bone to brain.

Respectfully,

R. OGDEN DOREMUS.

———:‡o‡:———

By Prof. John Attfield, F. C. S.,

PROFESSOR OF PRACTICAL CHEMISTRY TO THE PHARMACEUTICAL SOCIETY OF GREAT BRITAIN; AUTHOR OF A MANUAL OF GENERAL, MEDICAL AND PHARMACEUTICAL CHEMISTRY.

LONDON, 17 BLOOMSBURY SQUARE, W. C., October 28, 1878.

To Messrs. Reed & Carnrick:—

GENTLEMEN,

I have analyzed the extract of malted Wheat, malted Oats and malted Barley, which you term MALTINE. I have also prepared, myself, some extract from these three malted cereals, and have similarly analyzed it, and may state at once that it corresponds, in every respect, with the Maltine made by myself. As regards the various Malt Extracts in the market, I may remark that your MALTINE belongs to the non-alcoholic class, and is far richer, not only in the directly nutritious materials, but in the farina-digesting Diastase. In comparison, your MALTINE is about ten times as valuable, as a flesh former; from five to ten times as valuable, as a heat producer; and, at least, five times as valuable, as a starch-digesting agent. It contains, unimpaired and in a highly concentrated form, the whole of the valuable materials which it is possible to extract from either malted Wheat, malted Oats or malted Barley.

Yours Faithfully,

JOHN ATTFIELD.
